Item 7.01 Regulation FD Disclosure.

The following information and exhibit is being furnished pursuant to Regulation FD.

On November 10, 2011, Green Plains Renewable Energy, Inc. issued a press release announcing that its wholly-owned subsidiary, BlendStar LLC, will build, own and operate a new ethanol unit train terminal in Birmingham, Alabama on the BNSF Railway. The new terminal will have 160,000 barrels of storage, and will receive full 96-car unit trains of ethanol, which can be offloaded within 24 hours. The terminal is expected to be completed in the third quarter of 2012 and will be served exclusively by the BNSF Railway. When complete, the terminal will provide a fully-automated rail unloading system with the initial capacity to distribute approximately 385,000 barrels of ethanol per month with 24-hour truck loading service. Development and operation of the new terminal is expected to bring a number of other economic benefits to the local Birmingham market, including additional jobs, tax revenues and local commerce. More than 60% of the \$15 million to \$17 million project construction costs, will be spent with local suppliers. BlendStar is in final negotiations with customers for multi-year terminaling agreements for the capacity of the facility. Blendstar's current Birmingham terminal will be retrofitted to handle other biofuels and liquid products when construction of the new unit train terminal facility is complete. A copy of this press release is attached hereto at Exhibit 99.1.
