**Securities registered pursuant to Section 12(b) of the Act:**

<b>Title of Class</b>	<b>Name of each exchange on which registered</b>
<b>Common Stock, (Par Value \$0.0001)</b>	<b>Nasdaq Stock Market, LLC</b>
<b>Securities registered pursuant to section 12(g) of the Act: None</b>	

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes  No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes  No

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes  No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes  No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Edgar Filing: Great Lakes Dredge & Dock CORP - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of large accelerated filer, accelerated filer, and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer  Accelerated filer   
Non-accelerated filer  (Do not check if a smaller reporting company) Smaller reporting company   
Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes  No

The aggregate market value of voting stock held by non-affiliates of the Registrant was \$435,108,882 at June 28, 2013. The aggregate market value was computed using the closing price of the common stock as of that date on the Nasdaq Stock Market. (For purposes of a calculating this amount only, all directors and executive officers of the registrant have been treated as affiliates.)

As of March 7, 2014, 59,736,196 shares of Registrant's Common Stock, par value \$.0001 per share, were outstanding.

### **Cautionary Note Regarding Forward-Looking Statements**

Certain statements in this Annual Report on Form 10-K may constitute forward-looking statements as defined in Section 27A of the Securities Act of 1933 (the Securities Act ), Section 21E of the Securities Exchange Act of 1934 (the Exchange Act ), the Private Securities Litigation Reform Act of 1995 (the PSLRA ) or in releases made by the Securities and Exchange Commission ( SEC ), all as may be amended from time to time. Such forward-looking statements involve known and unknown risks, uncertainties and other important factors that could cause the actual results, performance or achievements of Great Lakes Dredge & Dock Corporation and its subsidiaries ( Great Lakes ), or industry results, to differ materially from any future results, performance or achievements expressed or implied by such forward-looking statements. Statements that are not historical fact are forward-looking statements.

Forward-looking statements can be identified by, among other things, the use of forward-looking language, such as the words plan, believe, expect, anticipate, intend, estimate, project, may, would, could, should, or other similar words, or the negative of these terms or other variations of these terms or comparable language, or by discussion of strategy or intentions. These cautionary statements are being made pursuant to the Securities Act, the Exchange Act and the PSLRA with the intention of obtaining the benefits of the safe harbor provisions of such laws. Great Lakes cautions investors that any forward-looking statements made by Great Lakes are not guarantees or indicative of future performance. Important assumptions and other important factors that could cause actual results to differ materially from those forward-looking statements with respect to Great Lakes, include, but are not limited to, risks and uncertainties that are described in Item 1A of this Annual Report on Form 10-K for the year ended December 31, 2013, and in other securities filings by Great Lakes with the SEC.

Although Great Lakes believes that its plans, intentions and expectations reflected in or suggested by such forward-looking statements are reasonable, actual results could differ materially from a projection or assumption in any forward-looking statements. Great Lakes future financial condition and results of operations, as well as any forward-looking statements, are subject to change and inherent risks and uncertainties. The forward-looking statements contained in this Annual Report on Form 10-K are made only as of the date hereof and Great Lakes does not have or undertake any obligation to update or revise any forward-looking statements whether as a result of new information, subsequent events or otherwise, unless otherwise required by law.

### **Availability of Information**

You may read and copy any materials Great Lakes files with the SEC, including without limitation the Company s Annual Report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports at the SEC s Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. Copies of such materials also can be obtained at the SEC s website, [www.sec.gov](http://www.sec.gov) or by mail from the Public Reference Room of the SEC, at prescribed rates. Please call the SEC at 1-800-SEC-0330 for further information on the Public Reference Room. Great Lakes SEC filings are also available to the public, free of charge, on its corporate website, [www.gldd.com](http://www.gldd.com) as soon as reasonably practicable after Great Lakes electronically files such material with, or furnishes it to, the SEC.

---

**Table of Contents**

**Part I**

**Item 1. Business**

The terms we, our, ours, us, Great Lakes and Company refer to Great Lakes Dredge & Dock Corporation and its subsidiaries.

**Organization**

Great Lakes is the largest provider of dredging services in the United States. The Company was founded in 1890 as Lydon & Drews Partnership and performed its first project in Chicago, Illinois. The Company changed its name to Great Lakes Dredge & Dock Company in 1905 and was involved in a number of marine construction and landfill projects along the Chicago lakefront and in the surrounding Great Lakes region. Great Lakes now provides dredging services in the East, West, and Gulf Coasts of the United States and worldwide. The Company also owns a specialty contracting service provider which primarily offers environmental and remediation services in the Northeast and Midwest U.S. areas. The Company has a 50% interest in Amboy Aggregates, a sand dredging operation in New Jersey and a 50% interest in TerraSea Environmental Solutions, ( TerraSea ) an environmental remediation services business.

On December 31, 2012, the Company acquired the assets and assumed certain liabilities of Terra Contracting, LLC ( Terra ), a respected provider of a wide variety of essential services for environmental, maintenance and infrastructure-related applications headquartered in Kalamazoo, MI, for a purchase price of approximately \$26 million. The Terra business constitutes the majority of the Company's redefined environmental & remediation segment.

The Company operates in four operating segments that, through aggregation, comprise two reportable segments: dredging and environmental & remediation, formerly known as the demolition segment. Four operating segments were aggregated into two reportable segments as the segments have similarity in economic margins, services, production processes, customer types, distribution methods and regulatory environment. The Company has determined that the operating segments are the Company's four reporting units. Financial information about the Company's reportable segments and operating revenues by geographic region is provided in Notes 9 and 15 to the Company's consolidated financial statements.

**Dredging Operations (approximately 87% of 2013 total revenues)**

Dredging generally involves the enhancement or preservation of navigability of waterways or the protection of shorelines through the removal or replenishment of soil, sand or rock. The U.S. primary dredging market consists of three types of work: capital, coastal protection (formerly referred to as beach nourishment) and maintenance. The Company separately categorizes rivers & lakes markets. This type of work typically has separate dredges and a different competitive landscape than the primary coastal markets. The Company's bid market is defined as the aggregate dollar value of domestic dredging projects on which the Company bid or could have bid if not for capacity constraints. The Company experienced an average combined bid market share in the U.S. of 37% over the prior three years, including 29%, 60% and 31% of the domestic capital, coastal protection, and maintenance sectors, respectively. The Company's average bid market share of rivers & lakes in the two years of activity since its acquisition is 43%.

Over its 123-year history, the Company has grown to be a leader in capital, coastal protection and maintenance dredging in the U.S. In addition, the Company is the only U.S. dredging service provider with significant international operations. Over the prior three years, foreign dredging operations accounted for an average of 16% of the Company's

dredging revenues. The Company's foreign projects are typically categorized in the capital work type, but are not included in the aforementioned bid market.

## **Table of Contents**

*Capital (domestic is approximately 24% of 2013 dredging revenues).* Capital dredging consists primarily of port expansion projects, which involve the deepening of channels to allow access by larger, deeper draft ships and the provision of land fill used to expand port facilities. In addition to port work, capital projects also include land reclamations, trench digging for pipelines, tunnels and cables, and other dredging related to the construction of breakwaters, jetties, canals and other marine structures. Although capital work can be impacted by budgetary constraints and economic conditions, these projects typically generate an immediate economic benefit to the ports and surrounding communities.

*Foreign (approximately 22% of 2013 dredging revenues).* Foreign capital projects typically involve land reclamations, channel deepening and port infrastructure development. The Company targets foreign opportunities that are well suited to the Company's equipment and where it faces reduced competition from its European competitors. Maintaining a presence in foreign markets has enabled the Company to diversify its customer base and take advantage of differences in global economic development. Over the last ten years, the Company has performed dredging work in the Middle East, Africa, India, Australia, the Caribbean and Central and South America. Most recently, the Company has focused its efforts on opportunities in Australia, the Middle East and South America.

*Coastal protection (approximately 35% of 2013 dredging revenues).* Coastal protection was previously referred to as beach nourishment. Coastal protection is a more accurate description of this important dredging work that protects valuable infrastructure along the coast lines. Coastal protection projects generally involve moving sand from the ocean floor to shoreline locations where erosion threatens shoreline assets. Beach erosion is a continuous problem that has intensified with the rise in coastal development and has become an important issue for state and local governments concerned with protecting beachfront tourism and real estate. Coastal protection via beach nourishment is often viewed as a better response to erosion than trapping sand through the use of sea walls and jetties, or relocating buildings and other assets away from the shoreline. Generally, coastal protection projects take place during the fall and winter months to minimize interference with bird and marine life migration and breeding patterns and coastal recreation activities.

*Maintenance (approximately 14% of 2013 dredging revenues).* Maintenance dredging consists of the re-dredging of previously deepened waterways and harbors to remove silt, sand and other accumulated sediments. Due to natural sedimentation, most channels generally require maintenance dredging every one to three years, thus creating a recurring source of dredging work that is typically non-deferrable if optimal navigability is to be maintained. In addition, severe weather such as hurricanes, flooding and droughts can also cause the accumulation of sediments and drive the need for maintenance dredging.

*Rivers & lakes (approximately 5% of 2013 dredging revenues).* Domestic rivers and lakes dredging and related operations typically consist of lake and river dredging, inland levee and construction dredging, environmental restoration and habitat improvement and other marine construction projects. Although the Mississippi River has the largest source of projects on which the Company bids, certain dredges used on these projects are more portable and able to be transported to take advantage of the fragmented market. Generally, inland river and lake projects in the northern U.S. take place in non-winter months because frozen waterways significantly reduce the Company's ability to operate and transport its equipment in the relevant geographies.

*Amboy Aggregates.* The Company and a New Jersey aggregates company each own 50% of Amboy Aggregates ( Amboy ). Amboy was formed in December 1984 to mine sand from the entrance channel to New York Harbor to provide sand and aggregate for use in road and building construction and for clean land fill. Amboy also imports stone from upstate New York and Nova Scotia and distributes it throughout the New York area. The Company's dredging expertise and its partner's knowledge of the aggregate market form the basis for the joint venture.

***Dredging Demand Drivers***

The Company believes that the following factors are important drivers of the demand for its dredging services:

*Deep port capital projects.* Most U.S. ports have continual expansion plans that include deepening and widening in order to better compete for international trade. International trade, particularly in the

**Table of Contents**

intermodal container shipping business, is undergoing significant change as a result of the Panama Canal expansion. Many shipping lines have announced plans to deploy larger ships which, due to the channel dimension requirements, currently cannot use many U.S. ports. Miami has begun deepening its port channels to accommodate the larger vessels. This is expected to put more pressure on U.S. ports such as Savannah, Jacksonville and Charleston to deepen in order to remain competitive. In addition, the Ports of Los Angeles and Long Beach are resuming expansion efforts to remain competitive with deepened East Coast ports. The Company believes that port deepening and expansion work authorized under current and future legislation will continue to provide significant opportunities for the domestic dredging industry.

*Gulf coast restoration.* There has been continued focus on restoring the barrier islands and wetlands that provide natural protection from storms in the Gulf Coast area. Many restoration projects have commenced to repair coastal areas. Several additional projects are being planned by state and local governments to restore natural barriers. The State of Louisiana has completed a master plan calling for a \$50 billion investment in their coastal infrastructure, with a significant portion involving dredging. The annual bid market for domestic capital dredging, which includes deep port capital dredging and Gulf Coast restoration, averaged \$320 million over the prior three years.

*Substantial need for coastal protection.* Beach erosion is a continuous problem due to the normal ebb and flow of coastlines as well as the effects of severe storm activity. Growing populations in coastal communities and vital beach tourism are drawing attention to the importance of protecting beachfront assets. Over the past few years, both the federal government and state and local entities have funded beach work recognizing the essential role these natural barriers play in absorbing storm energy and protecting public and private property. Superstorm Sandy has highlighted the need for projects that clear the navigation channels, renourish damaged beaches and mitigate shore erosion from future storms. The annual bid market for coastal protection over the prior three years averaged \$200 million.

*Required maintenance of U.S. ports.* The channels and waterways leading to U.S. ports have stated depths on which shippers rely when entering those ports. Due to naturally occurring sedimentation and severe weather, active channels require maintenance dredging to ensure that stated depths are at authorized levels. Consequently, the need to maintain channel depth creates a recurring source of dredging work that is non-deferrable if optimal navigability is to be preserved. The U.S. Army Corps of Engineers (the Corps) is responsible for federally funded projects related to navigation and flood control of U.S. waterways. The maritime industry, including the ports, continues to advocate for Congressional efforts to ensure that a fully funded, recurring maintenance program is in place. The annual bid market for maintenance dredging over the prior three years averaged \$384 million.

*Need to maintain safe navigability of the U.S. river system.* There are over 12 thousand miles of commercially navigable inland waterways that move more than 566 million tons of commercial goods. Transportation by barge requires less energy, and therefore is both better for the environment as well as costs less, to move cargo than transportation by airplane, railcar or truck. Many industries rely on safe navigability of U.S. inland waterways as a primary means to transport goods and commodities such as coal, chemicals, petroleum, minerals, stones, metals and agricultural products. Natural sedimentation and other circumstances require that the inland waterway system be periodically dredged so that it can be used as intended. The Corps recognizes the need to maintain the safe navigability of U.S. waterways.

*Domestic and international energy transportation.* The growth in demand for transportation of energy worldwide has driven the need for dredging to support new terminals, harbors, channels and pipelines. Great Lakes has committed vessels to create new berths for liquid natural gas ( LNG ) terminals being developed to export abundant energy resources from the west coast of Australia. Great Lakes is also dredging harbors for petroleum export facilities in Brazil. Future global energy demand will necessitate improvements in the infrastructure base around sources of rich resources and countries that import global energy.

## **Table of Contents**

*Middle East market.* Over the past ten years, the Middle East has been a strong market for dredging services. With the substantial income from oil revenues and real estate development, these countries have been undergoing extensive infrastructure expansion. There continues to be demand for infrastructure development in the Middle East which presents opportunities suited to the Company's equipment in the region.

*Australia and Southeast Asia.* Port traffic continues to surge in the developing markets throughout Southeast Asia and the Southwest Pacific. Advances in economic output in conjunction with growing populations and greater prosperity are driving increased shipping needs. With this growth in marine traffic comes a need for additional port capacity and infrastructure improvement. Great Lakes is investing resources in these markets and expects to see an increased demand for the Company's dredging services.

### **Environmental & Remediation Operations (approximately 13% of 2013 total revenues)**

The environmental & remediation segment provides soil, water and sediment environmental remediation for the municipal and private party markets. Remediation involves the retrieval and removal of contamination from an environment through the use of separation techniques or disposal based on the quantity and severity of the contamination. The Company had historically provided certain environmental remediation in conjunction with its discontinued demolition business and added additional skillsets through its acquisition of Terra in 2012. Besides environmental remediation, the environmental & remediation segment performs industrial cleaning, abatement services and hazardous waste removal. Additionally, the historical demolition and site preparation businesses are a reporting unit of the environmental & remediation segment, but are classified as discontinued and are currently held for sale.

*TerraSea Environmental Solutions.* The Company and a European based remediation company each own 50% of TerraSea Environmental Solutions, a remediation business. TerraSea provides water and land based environmental services in the area of clean up and remediation of sediments, soil and groundwater for both marine and land based projects. The joint venture was established to capitalize on the expertise of the two equal partners for projects in the United States offering optimally engineered global solutions for environmental cleanup needs

### ***Environmental & Remediation Demand Drivers***

The Company believes that the following factors are important drivers of the demand for its environmental & remediation services:

*Increasing requirements for environmental services.* Both the dredging and environmental & remediation businesses have experienced requests for handling contaminated sediments and soils at project sites. The Environmental Protection Agency and several state agencies began to recognize the environmental hazards posed by stored industrial byproducts near waterways. The release of regulated pollutants into major waterways, inland lakes, landfills and public lands require the use of environmental remediation to remove the contaminated sediment.

*Government mandated remediation.* The Environmental Protection Agency mandates remediation initiatives that are paid for partially or in whole by responsible parties. The capability to provide the environmental clean-up of not only the waterway, but also the processing of the contaminated sediment or any contaminated soil from other brownfield sites provides a targeted growth opportunity for Great Lakes.

## Edgar Filing: Great Lakes Dredge & Dock CORP - Form 10-K

For additional details regarding Dredging Operations and Environmental & Remediation Operations, including financial information regarding our international and United States revenues and long-lived assets, see Item 7.

Management's Discussion and Analysis of Financial Condition and Results of Operations, and Item 8. Financial Statements and Supplementary Data in this Annual Report on Form 10-K, including Footnote 15 to the Company's consolidated financial statements.

## **Table of Contents**

### **Customers**

#### ***Dredging***

The dredging industry's customers include federal, state and local governments, foreign governments and both domestic and foreign private concerns, such as utilities, oil and other energy companies. Most dredging projects are competitively bid, with the award going to the lowest qualified bidder. Customers generally have few economical alternatives to dredging services. The Corps is the largest dredging customer in the U.S. and has responsibility for federally funded projects related to navigation and flood control. In addition, the U.S. Coast Guard and the U.S. Navy are responsible for awarding federal contracts with respect to their own facilities. In 2013, approximately 51% of the Company's dredging revenues were generated from approximately 53 different contracts with federal agencies or third parties operating under contracts with federal agencies.

#### ***Environmental & remediation***

Environmental & remediation customers include general contractors, corporations, Superfund potentially responsible parties, environmental engineering and construction firms that commission projects and local government and municipal agencies. This segment benefits from key relationships with certain customers in the general contracting and environmental engineering industries. In 2013, one of the environmental & remediation segment's customers was responsible for approximately 55% of the environmental & remediation segment's annual revenues; however, the loss of this customer would not have a material adverse effect on Great Lakes as a whole.

### **Bidding Process**

#### ***Dredging***

Most of the Company's dredging contracts are obtained through competitive bidding on terms specified by the party inviting the bid. The types of equipment required to perform the specified service and the estimated project duration affect the cost of performing the contract and the price that dredging contractors will bid.

For contracts under its jurisdiction, the Corps typically prepares a fair and reasonable cost estimate based on the specifications of the project. To be successful, a bidder must be determined by the Corps to be a responsible bidder (i.e., a bidder that generally has the necessary equipment and experience to successfully complete the project as well as the ability to obtain a surety bid bond) and submit the lowest responsive bid that does not exceed 125% of the Corps' original estimate. Contracts for state and local governments are generally awarded to the lowest qualified bidder. Contracts for private customers are awarded based on the contractor's experience, equipment and schedule, as well as price. While substantially all of the Company's dredging contracts are competitively bid, some government contracts are awarded through a sole source procurement process involving negotiation between the contractor and the government, while other projects are bid by the Corps through a request for proposal process. The request for proposal process benefits both Great Lakes and its customers as customers can award contracts based on factors beyond price, including experience and skill.

#### ***Environmental & remediation***

The majority of the environmental & remediation segment's projects are obtained through competitive bidding. When the environmental & remediation segment bids on a project, it evaluates the contract specifications and develops a cost estimate to which it adds an acceptable margin. While there are numerous competitors in the environmental & remediation services market, the Company benefits from its size, relationships and reputation. Therefore, there are

occasions where the Company is not the lowest bidder on a contract, but is still awarded the project based on its reputation and qualifications.

## **Table of Contents**

### **Bonding and Foreign Project Guarantees**

#### ***Dredging***

For most domestic projects and some foreign projects, dredging service providers are required to obtain three types of bonds: bid bonds, performance bonds and payment bonds. These bonds are typically provided by large insurance companies. A bid bond is required to serve as a guarantee that if a service provider's bid is chosen, the service provider will sign the contract. The amount of the bond is typically 20% of the service provider's bid, with a range generally between \$1 and \$10 million. After a contract is signed, the bid bond is replaced by a performance bond, the purpose of which is to guarantee that the job will be completed. If the service provider fails to complete a job, the bonding company would be required to complete the job and would be entitled to be paid the contract price directly by the customer. Additionally, the bonding company would be entitled to be paid by the service provider for any costs incurred in excess of the contract price. A service provider's ability to obtain performance bonds with respect to a particular contract depends upon the size of the contract, as well as the size of the service provider and its financial position. A payment bond is required to protect the service provider's suppliers and subcontractors in the event that the service provider cannot make timely payments. Payment bonds are generally written at 100% of the contract value.

Great Lakes has an agreement with Zurich American Insurance Company ( Zurich ) under which the Company can obtain performance, bid and payment bonds. Great Lakes has never experienced difficulty in obtaining bonding for any of its projects; and Great Lakes has never failed to complete a marine project in its 123 year history. For most foreign dredging projects, letters of credit or bank guarantees issued by foreign banks are required as security for the bid, performance and, if applicable, advance payment guarantees. The Company obtains its letters of credit under the Credit Agreement (as defined below) or its separate facility which is supported by the Export-Import Bank of the United States ( Ex-Im Bank ) under Ex-Im Bank's Working Capital Guarantee Program. Foreign bid guarantees are usually 2% to 5% of the service provider's bid. Foreign performance and advance payment guarantees are each typically 5% to 10% of the contract value.

#### ***Environmental & remediation***

The environmental & remediation segment contracts with both private, non-government customers and governmental entities. In general, it is not required to secure bonding for projects with non-governmental customers but is required to secure bonding for projects with governmental entities.

### **Competition**

#### ***Dredging***

The U.S. dredging industry is highly fragmented with approximately 250 entities in the U.S. presently operating more than 850 dredges, primarily in maintenance dredging. Most of these dredges are smaller and service the inland, as opposed to coastal, waterways, and therefore do not generally compete with Great Lakes except in our rivers & lakes market. Competition is determined by the size and complexity of the job; equipment bonding and certification requirements; and government regulations. Great Lakes and three other companies comprised approximately 72% of the Company's defined bid market related to domestic capital, coastal protection and maintenance over the prior three years. The foregoing percentage excludes work in the rivers & lakes market. Within the Company's bid market, competition is determined primarily on the basis of price. In addition, the Foreign Dredge Act of 1906, or Dredging Act, and Section 27 of the Merchant Marine Act of 1920, or Jones Act, provide significant barriers to entry with respect to foreign competition. Together these two laws prohibit foreign-built, chartered or operated vessels from competing in the U.S. See Business Government Regulations below.

Great Lakes competes with several smaller competitors in the domestic rivers and lakes market. Competition is determined primarily based on the basis of geographic reach, project execution capability and price.

## **Table of Contents**

Competition in the international market is dominated by four large European dredging companies all of which operate larger equipment and fleets that are more extensive than the Company's. In addition, there are several governmentally supported dredging companies that operate on a local or regional basis. The Company targets opportunities that are well suited to its equipment and where it can be most competitive. Most recently, the Company has focused on opportunities in the Middle East where the Company has cultivated close customer relationships and has pursued contracts compatible with the size of the Company's vessels.

### ***Environmental & remediation***

The U.S. environmental & remediation and related services industry is highly fragmented and is comprised mostly of small regional companies. The environmental & remediation segment is able to perform both smaller and larger, more complex projects. The environmental & remediation segment competes in the specialty contracting services industry primarily on the basis of its experience, reputation, equipment, key client relationships and price.

### **Equipment**

#### ***Dredging***

Great Lakes' fleet of dredges, material barges and other specialized equipment is the largest and most diverse in the U.S. The Company operates three principal types of dredging equipment: hopper dredges, hydraulic dredges and mechanical dredges.

*Hopper Dredges.* Hopper dredges are typically self-propelled and have the general appearance of an ocean-going vessel. The dredge has hollow hulls, or hoppers, into which material is suctioned hydraulically through drag-arms. Once the hoppers are filled, the dredge sails to the designated disposal site and either (i) bottom dumps the material or (ii) pumps the material from the hoppers through a pipeline to a designated site. Hopper dredges can operate in rough waters, are less likely than other types of dredges to interfere with ship traffic, and can be relocated quickly from one project to another. Hopper dredges primarily work on coastal protection and maintenance projects.

*Hydraulic Dredges.* Hydraulic dredges remove material using a revolving cutterhead which cuts and churns the sediment on the channel or ocean floor and hydraulically pumps the material by pipe to the disposal location. These dredges are very powerful and can dredge some types of rock. Certain dredged materials can be directly pumped for miles with the aid of multiple booster pumps. Hydraulic dredges work with an assortment of support equipment, which help with the positioning and movement of the dredge, handling of the pipelines and the placement of the dredged material. Great Lakes operates the only two large electric hydraulic dredges in the U.S., which makes the Company particularly competitive in markets with stringent emissions standards, such as California and Houston. Unlike hopper dredges, relocating hydraulic dredges and all their ancillary equipment requires specialized vessels and additional time and their operations can be impacted by ship traffic and rough waters. There is a wide distribution of hydraulic dredges from our smaller rivers & lakes vessels that use pipe sizes ranging from 10 to 22 and operate at between 365 and 3,200 total horsepower, while the Company's other hydraulic dredges use pipe sizes ranging from 18 to 36 and operate at between 1,900 and 20,300 total horsepower.

*Mechanical Dredges.* There are two basic types of mechanical dredges: clamshell and backhoe. In both types, the dredge uses a bucket to excavate material from the channel or ocean floor. The dredged material is placed by the bucket into material barges, or scows, for transport to the designated disposal area. The scows are emptied by bottom-dumping, direct pump-out or removal by a crane with a bucket. The Company purchased two new scows in 2013 and two additional in 2014 to support its operations. Mechanical dredges are capable of removing hard-packed sediments, blasted rock and debris and can work in tight areas such as along docks or terminals. Clamshell dredges

with specialized buckets are ideally suited to handle material requiring environmentally controlled disposal. The Company has the largest fleet of material barges in the domestic industry, which provides cost advantages when dredged material is required to be disposed far offshore or when

## **Table of Contents**

material requires controlled disposal. Additionally, the Company owns an electric clamshell dredge which provides an advantage in those markets with stringent emissions standards.

In addition, the Company has numerous pieces of smaller equipment that support its dredging operations. Great Lakes domestic dredging fleet is typically positioned on the East and Gulf Coasts, with a smaller number of vessels occasionally positioned on the West Coast, and with many of the rivers & lakes dredges on inland rivers and lakes. The mobility of the fleet enables the Company to move equipment in response to changes in demand. Great Lakes fleet also includes vessels currently positioned in the Middle East, Australia and Brazil. The Company currently estimates the replacement cost of its entire fleet to be in excess of \$1.5 billion.

The Company continually assesses its need to upgrade and expand its dredging fleet to take advantage of improving technology and to address the changing needs of the dredging market. The Company is also committed to preventive maintenance, which it believes is reflected in the long lives of most of its equipment and its low level of unscheduled downtime on jobs. To the extent that market conditions warrant the expenditures, Great Lakes can prolong the useful life of its vessels indefinitely. The Company has announced the construction of a dual mode articulated tug/barge trailing suction hopper dredge. The articulated tug and hopper dredge are expected to be delivered during the second half of 2016.

Certification of equipment by the U.S. Coast Guard and establishment of the permissible loading capacity by the American Bureau of Shipping ( A.B.S. ) are important factors in the Company's dredging business. Many projects, such as coastal protection projects with offshore sand borrow sites and dredging projects in exposed entrance channels or with offshore disposal areas, are restricted by federal regulations to be performed only by dredges or scows that have U.S. Coast Guard certification and a load line established by the A.B.S. The certifications indicate that the dredge is structurally capable of operating in open waters. The Company has more certified dredging vessels than any of the Company's domestic competitors and makes substantial investments to maintain these certifications

## ***Environmental & remediation***

The environmental & remediation segment owns and operates specialized remediation equipment, including a fleet of excavators equipped with shears, pulverizers, processors, grapples, and hydraulic hammers that provide high-capacity processing of construction and demolition debris for recycling, reclamation and disposal. The Company also owns and maintains a large number of skid-steer loaders, high pressure vacuum equipment trucks, heavy-duty large-capacity loaders, off-highway hauling units and a fleet of tractor-trailers for transporting equipment and materials to and from job sites. The Company rents additional equipment on a project-by-project basis, which allows the Company flexibility to adjust costs to the level of project activity.

## **Seasonality**

Seasonality does not generally have a significant impact on the Company's dredging operations. However, many East Coast coastal protection projects are limited by environmental windows that require work to be performed in winter months to protect wildlife habitats. The Company can mitigate the impact of these environmental restrictions to a certain extent because the Company has the flexibility to reposition its equipment to project sites, if available, that are not limited by these restrictions. In addition, rivers and lakes in the northern U.S. freeze during the winter, significantly reducing the Company's ability to operate and transport its equipment in the relevant geographies. Fish spawning and flooding can affect dredging operations as well.

The Company's environmental & remediation segment operates mainly in the Midwest and East Coast. Similar to the dredging segment, the environmental & remediation segment's projects are impacted by the freezing rivers and lakes

during the winter.

## **Table of Contents**

### **Weather**

The Company's ability to perform its contracts may depend on weather conditions. Inclement weather can delay the completion of a project, thereby causing the Company to incur additional costs. As part of bidding on fixed price contracts, the Company makes allowances, consistent with historical weather data, for project downtime due to adverse weather conditions. In the event that the Company experiences adverse weather beyond these allowances, a project may require additional days to complete, resulting in additional costs and decreased gross profit margins. Conversely, favorable weather can accelerate the completion of the project, resulting in cost savings and increased gross profit margins. Typically, Great Lakes is exposed to significant weather in the first and fourth quarters, and certain projects are required to be performed in environmental windows that occur during these periods. See *Business-Seasonality* above.

Weather is difficult to predict and historical records exist for only the last 100-125 years. Changes in weather patterns may cause a deviation from project weather allowances on a more frequent basis and consequently increase or decrease gross profit margin, as applicable, on a project-by-project basis. In a typical year, the Company works on many projects in multiple geographic locations and experiences both positive and negative deviations from project weather allowances. Accordingly, it is unlikely that future climate change will have a material adverse effect on the Company's results of operations.

### **Backlog**

The Company's contract backlog represents its estimate of the revenues that will be realized under the portion of the contracts remaining to be performed. For dredging contracts these estimates are based primarily upon the time and costs required to mobilize the necessary assets to and from the project site, the amount and type of material to be dredged and the expected production capabilities of the equipment performing the work. For environmental & remediation contracts, these estimates are based on the time and remaining costs required to complete the project, relative to total estimated project costs and project revenues agreed to with the customer. However, these estimates are necessarily subject to variances based upon actual circumstances. Because of these factors, as well as factors affecting the time required to complete each job, backlog is not always indicative of future revenues or profitability. In addition, a significant amount of the Company's dredging backlog relates to federal government contracts, which can be canceled at any time without penalty, subject to the Company's right, in some cases, to recover the Company's actual committed costs and profit on work performed up to the date of cancellation. The Company's backlog may fluctuate significantly from quarter to quarter based upon the type and size of the projects the Company is awarded from the bid market. A quarterly increase or decrease of the Company's backlog does not necessarily result in an improvement or a deterioration of the Company's business. The Company's backlog includes only those projects for which the Company has obtained a signed contract with the customer. The components of the Company's backlog including dollar amount and other related information are addressed in more detail in Item 7. *Management's Discussion and Analysis of Financial Condition and Results of Operations* *Bidding Activity and Backlog*.

### **Employees**

#### ***Dredging***

During 2013, the Company employed an average of 456 full-time salaried personnel in the U.S., including those in a corporate function. In addition, the Company employs U.S. hourly personnel, most of whom are unionized, on a project-by-project basis. Crews are generally available for hire on relatively short notice. During 2013, the Company employed a daily average of 628 hourly personnel to meet domestic project requirements.

At December 31, 2013, the Company employed approximately 18 expatriates, 23 foreign nationals and 92 local staff to manage and administer its Middle East operations. During 2013, the Company also employed a daily average of 223 hourly personnel to meet project requirements in the Middle East.

## **Table of Contents**

In addition, the Company employed approximately 26 expatriates to manage and administer the operations of the Wheatstone LNG project in Western Australia at December 31, 2013. During 2013, the Company also employed a daily average of 38 local hourly personnel to meet requirements on the project in Australia.

### ***Environmental & remediation***

At December 31, 2013, the environmental & remediation segment employed approximately 139 full-time salaried administrative employees, in addition to an average of 334 hourly employees pursuant to four union agreements. The hourly employees are hired on a project-by-project basis and are generally available for hire on relatively short notice.

### **Safety**

Safety of its employees is one of the highest priorities of Great Lakes. The Company promotes a safety culture committed to training, awareness and mutual responsibility for the wellbeing of workers. Accident prevention, safety and environmental protection have top priority in the Company's business planning, in the overall conduct of its business, and in the operation and maintenance of our vessels and facilities.

### **Unions**

The Company is a party to numerous collective bargaining agreements in the U.S. that govern its relationships with its unionized hourly workforce. However, three unions represent a large majority of our dredging employees—the International Union of Operating Engineers (IUOE), Local 25 and the Seafarers International Union. The Company's contracts with IUOE, Local 25 and Seafarers International Union expire in 2015. The Company has not experienced any major labor disputes in the past five years and believes it has good relationships with the unions that represent a significant number of its hourly employees; however, there can be no assurances that the Company will not experience labor strikes or disturbances in the future.

### **Government Regulations**

The Company is subject to government regulations pursuant to the Dredging Act, the Jones Act, the Shipping Act, 1916, or Shipping Act, and the vessel documentation laws set forth in Chapter 121 of Title 46 of the United States Code. These statutes require vessels engaged in dredging in the navigable waters of the United States to be documented with a coastwise endorsement, to be owned and controlled by U.S. citizens, to be manned by U.S. crews, and to be built in the United States. The U.S. citizen ownership and control standards require the vessel-owning entity to be at least 75% U.S. citizen owned and prohibit the chartering of the vessel to any entity that does not meet the 75% U.S. citizen ownership test.

### **Environmental Matters**

The Company's operations, facilities and vessels are subject to various environmental laws and regulations related to, among other things: dredging operations; the disposal of dredged material; protection of wetlands; storm water and waste water discharges; demolition activities; asbestos removal; transportation and disposal of wastes and materials; air emissions; and remediation of contaminated soil, sediments, surface water and groundwater. The Company is also subject to laws designed to protect certain marine species and habitats. Compliance with these statutes and regulations can delay appropriation and/or performance of particular projects and increase related project costs. Non-compliance can also result in fines, penalties and claims by third parties seeking damages for alleged personal injury, as well as damages to property and natural resources.

Certain environmental laws such as the U.S. Comprehensive Environmental Response, Compensation and Liability Act of 1980, and the Oil Pollution Act of 1990 impose strict and, under some circumstances joint and several, liability on owners and operators of facilities and vessels for investigation and remediation of releases and discharges of regulated materials, and also impose liability for related damages to natural resources. The Company's past and ongoing operations involve the use, and from time to time the release or discharge, of

**Table of Contents**

regulated materials which could result in liability under these and other environmental laws. The Company has remediated known releases and discharges as deemed necessary, but there can be no guarantee that additional costs will not be incurred if, for example, third party claims arise or new conditions are discovered.

The Company's projects may involve remediation, demolition, excavation, transportation, management and disposal of hazardous waste and other regulated materials. Various laws strictly regulate the removal, treatment and transportation of hazardous water and other regulated materials and impose liability for human health effects and environmental contamination caused by these materials. The Company's historical demolition business, for example, requires it to transport and dispose of hazardous substances and other wastes, such as asbestos. The Company takes steps to limit its potential liability by hiring qualified asbestos abatement subcontractors from time to time to remove such materials from our projects and some project contracts require the client to retain liability for hazardous waste generation.

Based on the Company's experience and available information, the Company believes that the future cost of compliance with existing environmental laws and regulations (and liability for known environmental conditions) will not have a material adverse effect on the Company's business, financial position, results of operations or cash flows. However, the Company cannot predict what environmental legislation or regulations will be enacted in the future, how existing or future laws or regulations will be enforced, administered or interpreted, or the amount of future expenditures that may be required to comply with these environmental or health and safety laws or regulations or to respond to newly discovered conditions, such as future cleanup matters or other environmental claims.

**Executive Officers**

The following table sets forth the names and ages of all of the Company's executive officers and the positions and offices presently held by them.

<b>Name</b>	<b>Age</b>	<b>Position</b>
Jonathan W. Berger	55	Chief Executive Officer and Director
William S. Steckel	56	Senior Vice President Chief Financial Officer
Kyle D. Johnson	52	Executive Vice President and Chief Operating Officer
David E. Simonelli	57	President of Dredging Operations
Maryann Waryjas	62	Senior Vice President Chief Legal Officer and Corporate Secretary

*Jonathan W. Berger, Chief Executive Officer*

Mr. Berger was named Chief Executive Officer in September 2010. Mr. Berger was a Partner in KPMG's Corporate Finance practice from 1991 through 1999 and was managing director and co-head of Corporate Finance for Navigant Consulting, Inc., a New York Stock Exchange-listed consulting firm, from 2001 to 2009. Mr. Berger was a Director and Chair of the Audit and Compensation Committees of Boise, Inc. He is a Certified Public Accountant and holds a Bachelor of Science from Cornell University and an M.B.A. from Emory University.

*William S. Steckel, Senior Vice President and Chief Financial Officer*

Mr. Steckel became Senior Vice President and Chief Financial Officer of Great Lakes in August 2012. From 2010 until joining Great Lakes, Mr. Steckel was the principal at WSS Strategic Advisors, a firm that provided financial, strategic and consulting services to various public and private companies. From 2008 to 2010, Mr. Steckel was with Daystar Technologies, Inc., a developer of technology for solar photovoltaic products, where he joined as CFO and Treasurer and progressed to become CEO, President and a member of the Board of Directors. From 2006 to 2008, he

was with privately held Norwood Promotional Products, a supplier of custom imprinted products to the advertising and promotional products industry, where he served as Senior Vice President, CFO and Treasurer. Prior to 2006, Mr. Steckel served in senior financial and general management

**Table of Contents**

roles with Invensys, St. Jude Medical and CTS Corporation. Mr. Steckel earned his Bachelor of Science in Accounting (Industrial Administration) at Iowa State University and his Master of Business Administration from Western Illinois University. He is also a Certified Public Accountant.

*Kyle D. Johnson, Executive Vice President and Chief Operating Officer*

Mr. Johnson was promoted to Executive Vice President and Chief Operating Officer in 2013. He had served the Company as a Senior Vice President of Operations from 2009. Previously, he held the position of Vice President and Chief Contract Manager since 2006. He joined the Company in 1983 as a Mechanical Engineer and has since held positions of increasing responsibility in domestic and international engineering and operations, including Area Engineer, Special Projects Manager and Manager of Production Engineering. Mr. Johnson was named Vice President in 2002. Mr. Johnson earned a Bachelor of Science degree in Engineering from Purdue University and a Master's of Science degree in Construction Engineering & Management from Stanford University.

*David E. Simonelli, President of Dredging Operations*

Mr. Simonelli was named President of Dredging Operations in April 2010. Mr. Simonelli is responsible for the Operations Support Group which includes estimating, engineering, operations, plant and equipment and foreign operations. He was named a Vice President of the Company in 2002 and Special Projects Manager in 1996. He joined the Company in 1978 as a Field Engineer. Mr. Simonelli earned a Bachelor of Science degree in Civil and Environmental Engineering from the University of Rhode Island. He is a member of the Hydrographic Society, the American Society of Civil Engineers and the Western Dredging Association.

*Maryann Waryjas, Senior Vice President, Chief Legal Officer and Corporate Secretary*

Ms. Waryjas was named Senior Vice President, Chief Legal Officer and Corporate Secretary in August 2012. From 2000 until joining Great Lakes, Ms. Waryjas was a partner at Katten Muchin Rosenman, LLP ( Katten ), where she most recently was co-chair of the firm's Corporate Governance and Mergers and Acquisitions Practices. Ms. Waryjas served two consecutive terms on Katten's Board of Directors. Prior to Katten, Ms. Waryjas was a partner at the Chicago offices of Jenner & Block and Kirkland & Ellis. She received her B.S. degree, magna cum laude, from Loyola University and her J.D. degree, cum laude, from Northwestern University School of Law.

**Table of Contents****Item 1A. Risk Factors**

The following risk factors address the material risks and uncertainties concerning our business. You should carefully consider the following risks and other information contained or incorporated by reference into this Annual Report on Form 10-K when evaluating our business and financial condition and an investment in our common stock. Should any of the following risks or uncertainties develop into actual events, such developments could have material adverse effects on our business, financial condition, cash flows and results of operations. We have grouped our Risk Factors under captions that we believe describe various categories of potential risk. For the reader's convenience, we have not duplicated risk factors that could be considered to be included in more than one category.

**Risks Related to our Business**

*We depend on our ability to continue to obtain federal government dredging and other contracts, and are therefore impacted by the amount of government funding for dredging and other projects. A reduction in government funding for dredging or other contracts, or government cancellation of such contracts, could materially adversely affect our business operations, revenues and profits.*

A substantial portion of our revenue is derived from federal government contracts, particularly dredging contracts. Revenues related to dredging contracts with federal agencies or companies operating under contracts with federal agencies and the percentage as a total of dredging revenue for the years ended December 31, 2013, 2012 and 2011 were as follows:

	<b>Year Ended December 31,</b>		
	<b>2013</b>	<b>2012</b>	<b>2011</b>
Federal government dredging revenue (in US \$1,000)	\$ 329,185	\$ 405,434	\$ 289,120
Percent of dredging revenue from federal government	51%	69%	56%

Amounts spent by the federal government on dredging and remediation are subject to the budgetary and legislative processes. We would expect the federal government to continue to improve and maintain ports as it has for many years, which will necessitate a certain level of federal spending. However, there can be no assurance that the federal government will allocate any particular amount or level of funds to be spent on dredging or remediation projects for any specified period.

In addition, potential contract cancellations, modifications, protests, suspensions or terminations may arise from resolution of these issues and could cause our revenues, profits and cash flows to be lower. Federal government contracts can be canceled at any time without penalty to the government, subject to, in most cases, our contractual right to recover our actual committed costs and profit on work performed up to the date of cancellation. Accordingly, there can be no assurance that the federal government will not cancel any federal government contracts that have been or are awarded to us. Even if a contract is not cancelled, the government may elect to not award further work pursuant to a contract. A significant reduction in government funding for dredging or remediation contracts, could materially adversely affect our business, operations, revenues and profits.

*We depend on our ability to qualify as an eligible bidder under government contract criteria and to compete successfully against other qualified bidders in order to obtain government dredging and other contracts. Our inability to qualify or to compete successfully for certain contracts could materially adversely affect our business operations, revenues and profits.*

The U.S. government conducts a rigorous competitive process for awarding most contracts. Some contracts include multiple award task order contracts in which several contractors are selected as eligible bidders for future work. We will face strong competition and pricing pressures for any additional contract awards from the U.S. government, and we may be required to qualify or continue to qualify under various multiple award task order contract criteria. Our inability to qualify as an eligible bidder under government contract criteria could

## **Table of Contents**

preclude us from competing for certain government contract awards. In addition, our inability to qualify as an eligible bidder, or to compete successfully when bidding for certain government contracts and to win those contracts, could materially adversely affect our business, operations, revenues and profits.

***The nature of our contracts, particularly those that are fixed-price, subjects us to risks associated with cost over-runs, operating cost inflation and potential claims for liquidated damages. If we are unable to accurately estimate our costs to complete our projects, our profitability could suffer.***

We conduct our business under various types of contracts where costs are estimated in advance of our performance. Most dredging contracts are fixed-price contracts where the customer pays a fixed price per unit (e.g., cubic yard) of material dredged. In addition, most of our demolition and remediation contracts carry similar risks to our fixed-price dredging contracts. Fixed-price contracts carry inherent risks, including risks of losses from underestimating costs, operational difficulties, and other changes that sometimes occur over the contract period. If our estimates prove inaccurate, if there are errors or ambiguities as to contract specifications, or if circumstances change due to, among other things, unanticipated technical problems, difficulties in obtaining permits or approvals, changes in local laws or labor conditions, inclement or hazardous weather conditions, changes in cost of equipment or materials, or our suppliers or subcontractors inability to perform, then cost over-runs and delays in performance are likely to occur. We may not be able to obtain compensation for additional work performed or expenses incurred. Additionally, we may be required to pay liquidated damages upon our failure to meet schedule or performance requirements of our contracts. Our failure to accurately estimate the resources and time required for fixed-price contracts or our failure to perform our contractual obligations within the expected time frame and costs could result in reduced profits or, in certain cases, a loss for that contract. If we were to significantly underestimate the costs on one or more significant contracts, the resulting losses could have a material adverse effect on our business, operating results, cash flows or financial condition.

***Our results of operations depend on the award of new contracts and the timing of the performance of these contracts. As a result, our quarterly operating results may vary significantly.***

Our quarterly and annual results of operations have fluctuated from period to period in the past and may continue to fluctuate in the future. Accordingly, you should not rely on the results of any past quarter or quarters as an indication of future performance in our business operations or valuation of our stock. Our operating results could vary greatly from period to period due to factors such as:

the timing of contract awards and the commencement or progress of work under awarded contracts;

inclement or hazardous weather conditions that may result in underestimated delays in dredging, demolition or remediation and additional contract expenses;

planned and unplanned equipment downtime;

our ability to recognize revenue from pending change orders, which is not recognized until the recovery is probable and collectability is reasonably assured;

environmental restrictions requiring that certain projects be performed in winter months to protect wildlife habitats; and

equipment mobilization to and from projects.

If our results of operations from quarter to quarter fail to meet the expectations of public market analysts and investors, our stock price could be negatively impacted. See Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations Primary Factors that Determine Operating Profitability.

***If we fail to comply with government contracting regulations, our revenue could suffer, and we could be subject to significant potential liabilities.***

Our contracts with federal, state and local governmental customers are subject to various procurement regulations and contract provisions. These regulations also subject us to examinations by government auditors

**Table of Contents**

and investigators, from time to time, to ensure compliance and to review costs. Violations of government contracting regulations could result in the imposition of civil and criminal penalties, which could include termination of contracts, forfeiture of profits, imposition of payments and fines and suspension or debarment from future government contracting. If we fail to continue to qualify for or are suspended from work under a government contract for any reason, we could suffer a material adverse effect on our business, operating results, cash flows or financial condition.

In addition, we may be subject to litigation brought by private individuals on behalf of the government relating to our government contracts, referred to in this annual report as *qui tam* actions, which could include claims for up to treble damages. *Qui tam* actions are sealed by the court at the time of filing. The only parties privy to the information in the complaint are the complainant, the U.S. government and the court. Therefore, it is possible that *qui tam* actions have been filed against us and that we are not aware of such actions or have been ordered by the court not to discuss them until the seal is lifted. Thus, it is possible that we are subject to liability exposure arising out of *qui tam* actions.

***We are subject to risks related to our international dredging operations.***

Revenue from foreign contracts and its percentage to total dredging revenue for the years ended December 31, 2013, 2012 and 2011 were as follows:

	<b>Year Ended December 31,</b>		
	<b>2013</b>	<b>2012</b>	<b>2011</b>
Foreign revenue (in US \$1,000)	\$ 138,436	\$ 112,242	\$ 77,232
Percent of dredging revenue from foreign countries	22%	19%	15%

The international dredging market is highly competitive and competition in the international market is dominated by four large European dredging companies all of which operate larger equipment and fleets that are more extensive than the Company's. In addition, there are several governmentally supported dredging companies that operate on a local or regional basis. Competing for international dredging projects requires a substantial investment of resources, skilled personnel and capital investment in equipment and technology, and may adversely affect our ability to deploy resources for domestic dredging projects.

International operations subject us to additional potential risks, including:

uncertainties concerning import and export license requirements, tariffs and other trade barriers;

political and economic instability;

reduced demand as a result of fluctuations in the price of oil, the primary export in the Middle East;

restrictions on repatriating foreign profits back to the United States;

difficulties in enforcing contractual rights and agreements through certain foreign legal systems;

requirements of, and changes in, foreign laws, policies and regulations;

difficulties in staffing and managing international operations without additional expense;

taxation issues;

greater difficulty in accounts receivable collection and longer collection periods;

compliance with the U.S. Foreign Corrupt Practices Act;

currency fluctuations;

logistical and communication challenges; and

inability to effectively insure against political, cultural and economic uncertainties, including acts of terrorism, civil unrest, war or other armed conflict.

## **Table of Contents**

In addition, our international operations are subject to U.S. and other laws and regulations regarding operations in foreign jurisdictions. These numerous and sometimes conflicting laws and regulations include anti-boycott laws, anti-competition laws, anti-corruption laws, tax laws, immigration laws, privacy laws and accounting requirements. There is a risk that some provisions may be breached, for example through inadvertence or mistake, fraudulent or negligent behavior of individual employees, or failure to comply with certain formal documentation requirements or otherwise. Violations of these laws and regulations could result in fines and penalties, criminal sanctions against us, our officers, or our employees, prohibitions on the conduct of our business and on our ability to operate in one or more countries, and could have a material adverse effect on our business, results of operations or financial condition. In addition, military action or continued unrest in the Middle East could affect the safety of our personnel in the region and significantly increase the costs of, or disrupt our operations in, the region and could have a material adverse effect on our business, operating results, cash flows or financial condition.

### ***A significant portion of our international revenue is earned from large, single customer contracts.***

The Company earns significant revenue from governmental entities in the Middle East. Revenue from foreign projects has been concentrated in Bahrain and primarily with the government of Bahrain which comprised 15%, 71% and 61% of our foreign dredging revenues in 2013, 2012 and 2011, respectively. In 2013, a large, single customer contract was signed in Qatar with a local government entity. This contract represented 34% of the Company's 2013 foreign dredging revenue from all sources. The Company continues to maintain significant equipment in the Middle East region and continues to pursue additional contracts in the region.

Certain factors have occurred suggesting that future revenues from projects with governments in the Middle East could decrease. The contraction in the Middle East real estate market has slowed the rate of the region's infrastructure development. If our commercial relationship with Bahrain or Qatar is terminated, the Company's international revenues would be materially and adversely impacted. If the government of Bahrain or Qatar further curtails its infrastructure investment or diversifies its use of dredging vendors, our revenue from these customers could decline further.

Bahrain continues to experience civil unrest and political protests that could result in governmental instability. In response thereto, the government of Bahrain may institute measures, such as a national curfew, that may impact our ability to execute on projects in Bahrain. It is uncertain whether civil unrest will continue, whether the current protests and other activities may lead to any meaningful government changes, and what restrictions, if any, the Bahrain government may establish. In addition, such events may affect the Bahrain government's plans for infrastructure investment. If the government changes or significant restrictions are established, our Bahrain dredging operations, including the value of our assets related to such operations, may be adversely affected.

Other Middle East governments have national dredging companies or have significant history with competitive dredging vendors other than the Company. The Company could lose future contracts for work in the Middle East to these competitors or could be forced to accept lower margins on contracts in order to utilize the equipment that is in the Middle East. In addition, the Company may be forced to shrink the workforce in place or relocate dredging assets from this region in reaction to lower contract earnings. Lower utilization, workforce reductions or asset relocations could have a material adverse effect on our business, operating results, cash flows or financial condition.

The Company earns significant revenue from a large, single customer foreign contract. The contract is with another dredging company and is subject to terms that limit our ability to control the operations affecting the profitability of the Company's contract. The expected revenue and profit on this contract is subject to material changes based upon the actual time and costs incurred to perform the work and the realization of contract incentives which may be outside the Company's control. Changes in the estimated profitability of this contract may have a material effect on the Company's

operating results, cash flows or financial condition until the project is completed, which is expected in 2015.

**Table of Contents**

***Our use of the percentage-of-completion method of accounting could result in a change in previously recorded revenue and profit.***

We recognize contract revenue using the percentage-of-completion method. The majority of our work is performed on a fixed-price basis. Contract revenue is accrued based on engineering estimates for the physical percent complete for dredging and estimates of remaining costs to complete for environmental & remediation. We use generally accepted accounting principles in the United States relating to the percentage-of-completion method, estimating costs, revenue recognition, combining and segmenting contracts and change order/claim recognition. Percentage-of-completion accounting relies on the use of estimates in the process of determining income earned. The cumulative impact of revisions to estimates is reflected in the period in which these changes are experienced or become known. Given the risks associated with the variables in these types of estimates, it is possible for actual costs to vary from estimates previously made, which may result in reductions or reversals of previously recorded net revenues and profits.

***We reported a material weakness in our internal control over financial reporting in the fiscal year ending December 2012. Future lapses in disclosure controls and procedures or internal control over financial reporting could materially and adversely affect our operations, profitability or reputation.***

In connection with management's assessment of our internal control over financial reporting in the fiscal year ended December 2012 and interim quarterly periods in that fiscal year, we identified a material weakness in our internal control over financial reporting and also restated our financial results for the second and third quarters of 2012. We believe we have taken the steps necessary to remediate the material weakness and the controls implemented to remediate the material weakness were determined to be operating effectively as of December 31, 2013.

There can be no assurance that our disclosure controls and procedures will be effective in the future or that a material weakness or significant deficiency in internal control over financial reporting could not occur. Any such lapses or deficiencies may materially and adversely affect our business, operating results, cash flows or financial condition, restrict our ability to access the capital markets, require us to expend significant resources to correct the lapses or deficiencies, expose us to regulatory or legal proceedings, including litigation brought by private individuals, subject us to fines, penalties or judgments, harm our reputation, or otherwise cause a decline in investor confidence and our stock price.

Further, we have incurred significant costs in connection with the announcement of the restatement and our remediation efforts. These costs include additional professional fees related to the remediation of the material weakness as well as ongoing costs related to litigation arising from the restatement. See Note 12 to our Consolidated Financial Statements for additional information regarding this litigation. There can be no assurances that we will not have to incur additional significant costs in connection with these matters.

***The amount of our estimated backlog is subject to change and not necessarily indicative of future revenues.***

Our contract backlog represents our estimate of the revenues that we will realize under the portion of the contracts remaining to be performed. For dredging contracts these estimates are based primarily upon the time and costs required to mobilize the necessary assets to and from the project site, the amount and type of material to be dredged and the expected production capabilities of the equipment performing the work. For demolition and remediation contracts, these estimates are based on the time and remaining costs required to complete the project relative to total estimated project costs and project revenues agreed to with the customer. However, these estimates are necessarily subject to variances based upon actual circumstances. From time to time, changes in project scope may occur with respect to contracts reflected in our backlog and could reduce the dollar amount of our backlog and the timing of the revenue and profits that we actually earn. Projects may remain in our backlog for an extended period of time because

of the nature of the project and the timing of the particular services or equipment required by the project.

Because of these factors, as well as factors affecting the time required to complete each job, backlog is not necessarily indicative of future revenues or profitability. In addition, a significant amount of our dredging backlog (75% in 2013) relates to federal government contracts, which can be canceled at any time without

**Table of Contents**

penalty to the government, subject, in most cases, to our contractual right to recover our actual committed costs and profit on work performed up to the date of cancellation.

Below is our dredging backlog from federal government contracts as of December 31, 2013, 2012, and 2011 and the percentage of those contracts to total backlog as of the same date.

	<b>Year Ended December 31,</b>		
	<b>2013</b>	<b>2012</b>	<b>2011</b>
Federal government dredging backlog (in US \$1,000)	\$ 385,141	\$ 85,675	\$ 234,830
Percentage of dredging backlog from federal government	75%	22%	74%

In addition, as of December 31, 2013, 17% of our total backlog relates to a single customer in an international market. Our contract with this customer has certain contractual rights that, if invoked, limit our scope in the project.

The termination, modification or suspension of projects currently in backlog could have a material adverse effect on our financial condition, business, operations and profits.

***Our business would be adversely affected if we failed to comply with the Jones Act provisions on coastwise trade, or if those provisions were modified or repealed.***

We are subject to the Jones Act and other federal laws that restrict dredging in U.S. waters and maritime transportation between points in the United States to vessels operating under the U.S. flag, built in the United States, at least 75% owned and operated by U.S. citizens and manned by U.S. crews. We are responsible for monitoring the ownership of our common stock to ensure compliance with these laws. If we do not comply with these restrictions, we would be prohibited from operating our vessels in the U.S. market, and under certain circumstances we would be deemed to have undertaken an unapproved foreign transfer, resulting in severe penalties, including permanent loss of U.S. dredging rights for our vessels, fines or forfeiture of the vessels.

In the past, interest groups have unsuccessfully lobbied Congress to modify or repeal the Jones Act to facilitate foreign flag competition for trades and cargoes currently reserved for U.S. flag vessels under the Jones Act. We believe that continued efforts may be made to modify or repeal the Jones Act or other federal laws currently benefiting U.S. flag vessels. If these efforts are ever successful, it could result in significantly increased competition and have a material adverse effect on our business, results of operations, cash flows or financial condition.

***If we are unable, in the future, to obtain bonding or letters of credit for our contracts, our ability to obtain future contracts will be limited, thereby adversely affecting our business, operating results, cash flows or financial condition.***

We are generally required to post bonds in connection with our domestic dredging, remediation or demolition contracts and bonds or letters of credit with our foreign dredging contracts to ensure job completion if we ever fail to finish a project. We have entered into a bonding agreement with Zurich, pursuant to which Zurich acts as surety, issues bid bonds, performance bonds and payment bonds, and provides guarantees required by us in the day-to-day operations of our dredging business. However, under certain circumstances as specified in the agreement, Zurich is not obligated under the bonding agreement to issue future bonds for us. Historically, we have had a strong bonding capacity, but surety companies issue bonds on a project-by-project basis and can decline to issue bonds at any time or

require the posting of collateral as a condition to issuing any bonds. In addition to our bonds outstanding with Zurich, we also have surety bonds outstanding with Travelers Casualty and Surety Company of America. With respect to our foreign dredging business, we generally obtain letters of credit under our senior credit facility and a separate facility which is supported by Ex-Im under Ex-Im's Working Capital Guarantee Program. However, the amount of letters of credit under these facilities is limited. In addition, access to our senior credit facility and the Ex-Im facility may be limited by failure to meet certain financial requirements or other defined requirements. If we are unable to obtain bonds or letters of credit on terms reasonably acceptable to us, our ability to take on future work would be severely limited.

**Table of Contents**

***Capital expenditures and other costs necessary to operate and maintain our vessels tend to increase with the age of the vessel and may also increase due to changes in governmental regulations, safety or other equipment standards, which could result in a decrease in our profits.***

Capital expenditures and other costs necessary to operate and maintain our vessels tend to increase with the age of the vessel. Accordingly, it is likely that the operating costs of our vessels will increase.

The average age of our more significant vessels as of December 31, 2013, by equipment type, is as follows:

<b>Type of Equipment</b>	<b>Quantity</b>	<b>Average Age in Years</b>
Hydraulic Dredges	20	46
Hopper Dredges	7	31
Mechanical Dredges	5	38
Unloaders	1	29
Drillboats	2	37
Material and Other Barges	134	31
<b>Total</b>	<b>169</b>	<b>35</b>

Remaining economic life has not been presented because it is not reasonably quantifiable because, to the extent that market conditions warrant the expenditures, we can prolong the vessels' lives indefinitely. We operate in an industry where a significant portion of competitors' equipment is of a similar age. It is common in the dredging industry to make maintenance and capital expenditures in order to extend the economic life of equipment.

In addition, changes in governmental regulations, safety or other equipment standards, as well as compliance with standards imposed by maritime self-regulatory organizations, standards imposed by vessel classification societies and customer requirements or competition, may require us to make additional expenditures. For example, if the U.S. Coast Guard enacts new standards, we may be required to incur expenditures for alterations or the addition of new equipment (e.g. more fuel efficient engines). Other new standard requirements could be significant. In order to satisfy any such requirement, we may need to take our vessels out of service for extended periods of time, with corresponding losses of revenues.

***We may experience equipment or mechanical failures, which could increase costs, reduce revenues and result in penalties for failure to meet project completion requirements.***

The successful performance of contracts requires a high degree of reliability of our vessels, barges and equipment. The average age of our fleet as of December 31, 2013 was 35 years. Breakdowns not only add to the costs of executing a project, but they can also delay the completion of subsequent contracts, which are scheduled to utilize the same assets. We operate a scheduled maintenance program in order to keep all assets in good working order, but despite this, breakdowns can and do occur.

***We could face liabilities and/or damage to our reputation as a result of some of legal and regulatory proceedings.***

From time to time, we are subject to legal and regulatory proceedings in the ordinary course of our business. These include proceedings relating to aspects of our businesses that are specific to us and proceedings that are typical in the businesses in which we operate. We are currently a defendant in a number of litigation matters, including those described in Item 3. Legal Proceedings of this Annual Report on Form 10-K. In certain of these matters, the plaintiffs are seeking large and/or indeterminate amounts of damages. These matters are subject to many uncertainties, and it is possible that some of these matters could ultimately be decided, resolved or settled adversely to the Company. An adverse outcome in a legal or regulatory matter could, depending on the facts, have an adverse effect on our business, operating results, cash flows or financial condition.

## **Table of Contents**

In addition to its potential financial impact, legal and regulatory matters can have a significant adverse reputational impact. Allegations of improper conduct made by private litigants or regulators, whether the ultimate outcome is favorable or unfavorable to us, as well as negative publicity and press speculation about us, whether valid or not, may harm our reputation, which may be damaging to our business, results of operations and profits.

### ***We may become liable for the obligations of our joint ventures, partners and subcontractors.***

Some of our projects are performed through joint ventures and similar arrangements with other parties. In addition to the usual liability of contractors for the completion of contracts and the warranty of our work, if work is performed through a joint venture or similar arrangement, we also have potential liability for the work performed by the joint venture or arrangement. In these projects, even if we satisfactorily complete our project responsibilities within budget, we may incur additional unforeseen costs due to the failure of the other party or parties to the arrangement to perform or complete work in accordance with contract specifications. In some joint ventures and similar arrangements, we may not be the controlling partner. In these cases, we may have limited control over the actions of the joint venture. In addition, these joint ventures or arrangements may not be subject to the same requirements regarding internal controls and internal control over financial reporting that we follow. To the extent the controlling partner makes decisions that negatively impact the joint venture or arrangement or internal control problems arise within the joint venture or arrangement, it could have a material adverse impact on our business, operating results, cash flows or financial condition.

Depending on the nature of work required to complete the project, we may choose to subcontract a portion of the project. In our industries, the prime contractor is often responsible for the performance of the entire contract, including subcontract work. Thus, we are subject to the risk associated with the failure of one or more subcontractors to perform as anticipated. In addition, in some cases, we pay our subcontractors before our customers pay us for the related services. If we choose, or are required, to pay our subcontractors for work performed for customers who fail to pay, or delay paying us for the related work, we could experience a material decrease in profitability and liquidity.

### ***Our current business strategy includes the construction of new vessels. There are substantial uncertainties associated with such construction, including the possibility of unforeseen delays and cost overruns.***

We have previously disclosed our plans to build new vessels, including a new hopper dredge. Our future revenues and profitability will be impacted to some extent by our ability to complete the construction of new vessels, secure financing for them and bring them into service. The Company contracts with shipyards to build new vessels and currently has vessels under construction. Construction projects are subject to risks of delay and cost overruns, resulting from shortages of equipment, materials and skilled labor; lack of shipyard availability; unforeseen design and engineering problems; work stoppages; weather interference; unanticipated cost increases; unscheduled delays in the delivery of material and equipment; and financial and other difficulties at shipyards including labor disputes, shipyard insolvency and inability to obtain necessary certifications and approvals. A significant delay in the construction of new vessels or a shipyard's inability to perform under the construction contract could negatively impact the Company's ability to fulfill contract commitments and to realize timely revenues with respect to vessels under construction. Significant cost overruns or delays for vessels under construction could also adversely affect the Company's business, operating results, cash flows or financial condition. Changes in governmental regulations, safety or other equipment standards, as well as compliance with standards imposed by maritime self-regulatory organizations and customer requirements or competition, could substantially increase the cost of such construction beyond what we currently expect such costs to be.

Specifically, with regard to our new hopper dredge, we have previously disclosed that we have terminated our contract with the shipyard originally hired for this construction and entered into a contract with a new shipyard at a

significantly higher cost. We cannot predict whether and to what extent there may be additional costs associated with building this dredge or further delays in its completion.

**Table of Contents**

*Our current business strategy includes acquisitions which present certain risks and uncertainties. There are integration and consolidation risks associated with our acquisitions. Future acquisitions may result in significant transaction expenses, unexpected liabilities and risks associated with entering new markets, and we may be unable to profitably operate these businesses.*

We seek business acquisition activities as a means of broadening our offerings and capturing additional market opportunities by our business units. We may be exposed to certain additional risks resulting from these activities. Future acquisitions may expose us to operational challenges and risks, including:

the effects of valuation methodologies which may not accurately capture the value proposition;

the failure to integrate acquired businesses into our operations with the efficiency and effectiveness initially expected resulting in a potentially significant detriment to the associated business line's financial results and our operations as a whole;

the management of the growth resulting from acquisition activities;

the inability to capitalized on expected synergies;

the assumption of liabilities of an acquired business (for example, litigation, tax liabilities, environmental liabilities); including liabilities that were contingent or unknown at the time of the acquisition that pose future risks to our working capital needs, cash flows and the profitability of related operations;

the assumption of unprofitable projects that pose future risks to our working capital needs, cash flows and the profitability of related operations;

the risks associated with entering new markets;

diversion of management's attention from our existing business;

failure to retain key personnel, customers or contracts of any acquired business;

potential adverse effects on our ability to comply with covenants in our existing debt financing;

potential impairment of acquired intangible assets; and

additional debt financing, which may not be available on attractive terms.

We may not have the appropriate management, financial or other resources needed to integrate any businesses that we acquire. Any future acquisitions may result in significant transaction expenses and unexpected liabilities.

***Our current business strategy includes the divestiture of our demolition business, which presents certain risks and uncertainties.***

On February 25, 2014 the Company announced that, during the fourth quarter, the management team proposed, and the board of directors approved, a plan to sell our historical demolition business. The pursuit of the sale of this business raises some of the same risks associated with pursuing acquisitions, including diversion of management's attention from other business concerns; failure to achieve financial or operating objectives; potential loss of customers or key employees; and volatility in the Company's stock price. We cannot predict whether and to what extent we will be successful in effecting a divestiture of our demolition business. Following divestiture, there may be ongoing costs and expenses related to the discontinued operations for certain retained liabilities and asset recoveries. The divestiture of the historic demolition business could result in the Company becoming subject to significant withdrawal liability with respect to one or more multiemployer pension plans in which the subsidiaries in the historic demolition business participate. Some of the multiemployer plans in which we participate are reported to have significant underfunded liabilities. A future incurrence of withdrawal liability could have a material adverse impact on the ongoing costs and expenses related to the discontinued operations. Failure to divest the demolition business could have a material adverse impact on our business, operating results, cash flows or financial condition.

**Table of Contents**

***Environmental regulations could force us to incur capital and operational costs.***

Our industry, and more specifically, our operations, facilities and vessels, are subject to various environmental laws and regulations relating to, among other things: dredging operations; the disposal of dredged material; protection of wetlands; storm water and waste water discharges; demolition activities; asbestos removal; transportation and disposal of wastes and other regulated materials; air emissions; and remediation of contaminated soil, sediments, surface water and groundwater. We are also subject to laws designed to protect certain marine species and habitats. Compliance with these statutes and regulations can delay permitting and/or performance of particular projects and increase related project costs. These delays and increased costs could have a material adverse effect on our business, operating results, cash flows or financial condition. Non-compliance can also result in fines, penalties and claims by third parties seeking damages for alleged personal injury, as well as damages to property and natural resources.

Certain environmental laws such as the U.S. Comprehensive Environmental Response, Compensation and Liability Act of 1980 and the Oil Pollution Act of 1990 impose strict and, under some circumstances, joint and several, liability on owners and lessees of land and facilities as well as owners and operators of vessels. Such obligations may include investigation and remediation of releases and discharges of regulated materials, and also impose liability for related damages to natural resources. Our past and ongoing operations involve the use, and from time to time the release or discharge, of regulated materials which could result in liability under these and other environmental laws. We have remediated known releases and discharges as deemed necessary, but there can be no guarantee that additional costs will not be incurred if, for example, third party claims arise or new conditions are discovered.

Our projects may involve demolition, excavation, remediation, transportation, management and disposal of hazardous waste and other regulated materials. Various laws strictly regulate the removal, treatment and transportation of hazardous waste and other regulated materials and impose liability for human health effects and environmental contamination caused by these materials. Our demolition business, for example, requires us to transport and dispose of hazardous substances and other wastes, such as asbestos. Services rendered in connection with hazardous substance and material removal and site development may involve professional judgments by licensed experts about the nature of soil conditions and other physical conditions, including the extent to which hazardous substances and materials are present, and about the probable effect of procedures to mitigate problems or otherwise affect those conditions. If the judgments and the recommendations based upon those judgments are incorrect, we may be liable for resulting damages, which may be material. The failure of certain contractual protections to protect us from incurring such liability, such as staying out of the ownership chain for hazardous waste and other regulated materials and securing indemnification obligations from our customers or subcontractors, could have a material adverse effect on our business, results of operations, revenues or profits.

Environmental requirements have generally become more stringent over time, for example in the areas of air emissions controls for vessels and ballast treatment and handling. New or stricter enforcement of existing laws, the discovery of currently unknown conditions or accidental discharges of regulated materials in the future could cause us to incur additional costs for environmental matters which might be significant.

***Our business could suffer in the event of a work stoppage by our unionized labor force.***

We are a party to numerous collective bargaining agreements in the U.S. that govern our industry's relationships with our unionized hourly workforce. However, three unions represent approximately 55% of our dredging employees: the International Union of Operating Engineers (IUOE), Local 25 and the Seafarers International Union. The Company's contracts with IUOE, Local 25 and the Seafarers International Union expire in September 2015. The inability to successfully renegotiate contracts with these unions as they expire, or any future strikes, employee slowdowns or similar actions by one or more unions could have a material adverse effect on our ability to operate our business.

**Table of Contents**

***Our employees are covered by federal laws that may provide seagoing employees remedies for job-related claims in addition to those provided by state laws.***

Substantially all of our seagoing employees are covered by provisions of the Jones Act and general maritime law. These laws typically operate to make liability limits established by state workers' compensation laws inapplicable to these employees and to permit these employees and their representatives to pursue actions against employers for job-related injuries in federal or state courts. Because we are not generally protected by the limits imposed by state workers' compensation statutes with respect to our seagoing employees, we have greater exposure for claims made by these employees as compared to industries whose employees are not covered by these provisions.

***Our business is subject to significant operating risks and hazards that could result in damage or destruction to persons or property, which could result in losses or liabilities to us.***

The dredging, demolition and remediation businesses are generally subject to a number of risks and hazards, including environmental hazards, industrial accidents, encountering unusual or unexpected geological formations, cave-ins below water levels, collisions, disruption of transportation services and flooding. These risks could result in damage to, or destruction of, dredges, transportation vessels, other maritime structures and buildings, and could also result in personal injury, environmental damage, performance delays, monetary losses or legal liability to third parties. We may also be exposed to disruption of our operations and loss of use of our equipment that may materially adversely reduce our revenue and profits.

Our safety record is an important consideration for our customers. If serious accidents or fatalities occur or our safety record was to deteriorate, we may be ineligible to bid on certain work, and existing service arrangements could be terminated. Adverse experience with hazards and claims could have a negative effect on our reputation with our existing or potential new customers and our prospects for future work.

***Our current insurance coverage may not be adequate, and we may not be able to obtain insurance at acceptable rates, or at all.***

We maintain various insurance policies, including hull and machinery, pollution liability, general liability and personal injury. We partially self-insure risks covered by our policies. While we reserve for such self-insured exposures when appropriate for accounting purposes, we are not required to, and do not, specifically set aside funds for the self-insured portion of claims. At any given time, we are subject to Jones Act personal injury claims and claims from general contractors and other third parties for personal injuries. Our insurance policies may not be adequate to protect us from liabilities that we incur in our business. We may not be able to obtain similar levels of insurance on reasonable terms, or at all. Our inability to obtain such insurance coverage at acceptable rates or at all could have a material adverse effect on our business, operating results, profits or financial condition.

***If we are unable to attract and retain key personnel and skilled labor, our ability to bid for and successfully complete contracts may be negatively impacted.***

Our ability to attract and retain reliable, qualified personnel is a significant factor that enables us to successfully bid for and profitably complete our work. This includes members of our management, project managers, estimators, skilled engineers, supervisors, foremen, equipment operators and laborers. The loss of the services of any of our management could have a material adverse effect on us. If we do not succeed in retaining our current key employees and attracting, developing and retaining new highly-skilled employees, our reputation may be harmed and our operations and future earnings may be negatively impacted.

We may not be able to maintain an adequate skilled labor force necessary to operate efficiently and to support our growth strategy. We have from time to time experienced, and may in the future experience, shortages of certain types of qualified equipment operating personnel. The supply of experienced engineers, project managers, field supervisors and other skilled workers may not be sufficient to meet current or expected demand. If we are unable to hire employees with the requisite skills, we may also be forced to incur significant training

## **Table of Contents**

expenses. The occurrence of any of the foregoing could have an adverse effect on our business, operating results, cash flows or financial condition.

***We rely on information technology systems to conduct our business and disruption, failure or security breaches of these systems could adversely affect our business and results of operations.***

We rely on information technology (IT) systems in order to achieve our business objectives. Our portfolio of hardware and software products, solutions and services and our enterprise IT systems may be vulnerable to damage or disruption caused by circumstances beyond our control such as catastrophic events, power outages, natural disasters, computer system or network failures, computer viruses, cyber attacks or other malicious software programs. The failure or disruption of our IT systems to perform as anticipated for any reason could disrupt our business and result in decreased performance, significant remediation costs, transaction errors, loss of data, processing inefficiencies, downtime, failure to properly estimate the work or costs associated with projects, litigation and the loss of customers or suppliers. A significant disruption or failure could have a material adverse effect on our business, operating results, cash flows or financial condition. We are incurring costs associated with designing and implementing a new enterprise resource planning software system (ERP) with the objective of gradually migrating to the new system. Capital expenditures and expenses for the ERP for 2014 and beyond will depend upon the pace of conversion. If implementation is not executed successfully, this could result in business interruptions. If we do not complete the implementation of the ERP timely and successfully, we may incur additional costs associated with completing this project and a delay in our ability to improve existing operations, support future growth and enable us to take advantage of new engineering and other applications and technologies.

***We may be affected by market or regulatory responses to climate change.***

Increased concern about the potential impact of greenhouse gases (GHG), such as carbon dioxide resulting from combustion of fossil fuels, on climate change has resulted in efforts to regulate their emission. For example, there is a growing consensus that new and additional regulations concerning GHG emissions including cap and trade legislation may be enacted, which could result in increased compliance costs for us. Legislation, international protocols, regulation or other restrictions on GHG emissions could also affect our customers. Such legislation or restrictions could increase the costs of projects for our customers or, in some cases, prevent a project from going forward, thereby potentially reducing the need for our services which could in turn have a material adverse effect on our operations and financial condition. Additionally, in our normal course of operations, we use a significant amount of fossil fuels. The costs of controlling our GHG emissions or obtaining required emissions allowances in response to any regulatory change in our industry could increase materially.

## **Risks Related to our Financing**

***We have indebtedness, which makes us more vulnerable to adverse economic and competitive conditions.***

As of December 31, 2013, we had indebtedness of \$285 million consisting of \$250 million of senior subordinated notes and \$35 million of borrowings on our revolving credit facility. Our debt could:

require us to dedicate a portion of our cash flow from operations to payments on our indebtedness, thereby reducing the availability of our cash flow to fund working capital and capital expenditures, pay dividends and other general corporate purposes;

limit our flexibility in planning for, or reacting to, changes in our business and our industries;

affect our competitiveness compared to our less leveraged competitors;

increase our exposure to both general and industry-specific adverse economic conditions; and

limit, among other things, our ability to borrow additional funds.

## **Table of Contents**

In addition, we currently anticipate financing the construction and completed cost of our new hopper dredge under an operating lease or similar financing structure. If we are unable to secure that financing due to our current debt levels, credit ratings, size of the vessel cost and uncertainty of market conditions, it could have a material effect on the Company's operating results, cash flows or financial condition in future periods.

### ***Adverse capital and credit market conditions may affect our ability to meet liquidity needs, access to capital and cost of capital.***

The domestic and worldwide capital and credit markets may experience significant volatility, disruptions and dislocations with respect to price and credit availability. Should we need additional funds or to refinance our existing indebtedness, we may not be able to obtain such additional funds. In 2013, our credit rating was downgraded. As a result, we may have difficulty securing future funding, or funding may be on terms less favorable to us.

We need liquidity to pay our operating expenses, interest on our debt and dividends on our capital stock. Without sufficient liquidity, we will be forced to curtail our operations, and our business will suffer. The principal sources of our liquidity are cash flow from operations and borrowings under our senior credit facility. In the event these resources do not satisfy our liquidity needs, we may have to seek additional financing. The availability of additional financing will depend on a variety of factors such as market conditions, the general availability of credit, the volume of trading activities, our credit ratings and credit capacity, as well as the possibility that customers or lenders could develop a negative perception of our long- or short-term financial prospects if the level of our business activity decreased due to a market downturn. If internal sources of liquidity prove to be insufficient, we may not be able to successfully obtain additional financing on favorable terms, or at all.

### ***The adoption and implementation of new statutory and regulatory requirements for derivative transactions could have an adverse impact on our ability to hedge risks associated with our business.***

We may enter into interest rate swap agreements to manage the interest rate paid with respect to our fixed rate indebtedness, foreign exchange forward contracts to hedge currency risk and heating oil commodity swap contracts to hedge the risk that fluctuations in diesel fuel prices will have an adverse impact on cash flows associated with our domestic dredging contracts. The Dodd-Frank Wall Street Reform and Consumer Protection Act (the Financial Reform Act) provides for new statutory and regulatory requirements for derivative transactions, including foreign currency and other over-the-counter derivative hedging transactions. Several rulemaking requirements in the Financial Reform Act have not promulgated into final rules and the Company could be negatively impacted by future rulemaking. The rules currently adopted from the Financial Reform Act may significantly reduce our ability to execute strategic hedges to manage our interest expense, reduce our fuel commodity uncertainty and hedge our currency risk thus protecting our cash flows. In addition, the banks and other derivatives dealers who are our contractual counterparties are required to comply with extensive new regulation under the Financial Reform Act. The cost of our counterparties' compliance will likely be passed on to customers such as ourselves, thus potentially decreasing the benefits to us of hedging transactions and potentially reducing our profitability.

### ***We are subject to foreign exchange risks, and improper management of that risk could result in large cash losses.***

We are exposed to market risk associated with changes in foreign currency exchange rates. The primary foreign currencies to which the Company has exposure are the Bahraini dinar, the Australian dollar and the Brazilian real. Our international contracts may be denominated in foreign currencies, which will result in additional risk of fluctuating currency values and exchange rates, hard currency shortages and controls on currency exchange. Changes in the value of foreign currencies could increase our U.S. dollar costs for, or reduce our U.S. dollar revenues from, our foreign operations. Any increased costs or reduced revenues as a result of foreign currency fluctuations could affect our

profits. The value of the Bahraini dinar has historically been pegged to the value of the U.S. dollar, which has effectively eliminated the foreign currency risk with respect to that currency. However, if the dinar were no longer to be so pegged, whether due to civil unrest in Bahrain or otherwise, the Company could become subject to additional, and substantial, foreign currency risk.

---

**Table of Contents**

***The current uncertainty in the economic environment and other factors could lead to our goodwill and other intangible assets becoming impaired, which may require us to take significant non-cash charges against earnings.***

Under current accounting guidelines, we must assess, at least annually and potentially more frequently, whether the value of our goodwill and other intangible assets have been impaired. Any impairment of goodwill or other intangible assets as a result of such analysis would result in a non-cash charge against earnings, which charge could materially adversely affect our business, operating results, cash flows or financial condition. We test goodwill annually for impairment in the third quarter of each year, or more frequently should circumstances dictate. A significant and sustained decline in our future cash flows, a significant adverse change in the economic environment, slower growth rates or our stock price falling below our net book value per share for a sustained period could result in the need to perform additional impairment analysis in future periods. If we were to conclude that a future write-down of goodwill or other intangible assets is necessary, then we would be required to record a non-cash charge against earnings, which, in turn, could have a material adverse effect on our business, operating results, cash flows or financial condition. In the second quarter of 2013, the Company recorded an impairment charge at its demolition reporting unit of \$21.5 million. See Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations Critical Accounting Policies and Estimates.

***We have made and may continue to make debt or equity investments in privately financed projects in which we could sustain significant losses.***

We have participated and may continue to participate in privately financed projects that enable state and local governments and other customers to finance dredging, demolition and remediation projects, such as dredging of local navigable waterways and lakes, coastal protection and environmental remediation projects. These projects typically include the facilitation of non-recourse financing and the provision of dredging, demolition, remediation and related services. We may incur contractually reimbursable costs and may extend debt financing and/or make an equity investment in an entity prior to, in connection with, or as part of project financing, and in some cases we may be the sole or primary source of the project financing. If a project is unable to obtain other financing on terms acceptable to it in amounts sufficient to repay or redeem our investments, we could incur losses on our investments and any related contractual receivables. After completion of these projects, the return on our equity investments can be dependent on the operational success of the project and market factors, which may not be under our control. As a result, we could sustain a loss of part or all of our equity investments in such projects.

**Risks Related to our Stock**

***Our common stock is subject to restrictions on foreign ownership.***

We are subject to government regulations pursuant to the Dredging Act, the Jones Act, the Shipping Act and the vessel documentation laws set forth in Chapter 121 of Title 46 of the United States Code. These statutes require vessels engaged in the transport of merchandise or passengers or dredging in the navigable waters of the U.S. to be owned and controlled by U.S. citizens. The U.S. citizenship ownership and control standards require the vessel-owning entity to be at least 75% U.S.-citizen owned. Our certificate of incorporation contains provisions limiting non-citizenship ownership of our capital stock. If our board of directors determines that persons who are not citizens of the U.S. own more than 22.5% of our outstanding capital stock or more than 22.5% of our voting power, we may redeem such stock. The required redemption price could be materially different from the current price of our common stock or the price at which the non-citizen acquired the common stock. If a non-citizen purchases our common stock, there can be no assurance that he will not be required to divest the shares and such divestiture could result in a material loss. Such restrictions and redemption rights may make our equity securities less attractive to potential investors, which may result in our common stock having a lower market price than it might have in the

absence of such restrictions and redemption rights.

**Table of Contents**

*Delaware law and our charter documents may impede or discourage a takeover that you may consider favorable.*

The provisions of our certificate of incorporation and bylaws may deter, delay or prevent a third-party from acquiring us. These provisions include:

limitations on the ability of stockholders to amend our charter documents, including stockholder supermajority voting requirements;

the inability of stockholders to call special meetings;

a classified board of directors with staggered three-year terms;

advance notice requirements for nominations for election to the board of directors and for stockholder proposals; and

the authority of our board of directors to issue, without stockholder approval, up to 1,000,000 shares of preferred stock with such terms as the board of directors may determine and to issue additional shares of our common stock.

We are also subject to the protections of Section 203 of the Delaware General Corporation Law, which prevents us from engaging in a business combination with a person who acquires at least 15% of our common stock for a period of three years from the date such person acquired such common stock, unless board or stockholder approval was obtained.

These provisions could have the effect of delaying, deferring or preventing a change in control of our company, discourage others from making tender offers for our shares, lower the market price of our stock or impede the ability of our stockholders to change our management, even if such changes would be beneficial to our stockholders.

***Our stockholders may not receive dividends because of restrictions in our debt agreements, Delaware law and state regulatory requirements.***

Our ability to pay dividends is restricted by the agreements governing our debt, including the Credit Agreement, our bonding agreements and the indenture governing our senior unsecured notes. In addition, under Delaware law, our board of directors may not authorize payment of a dividend unless it is either paid out of our surplus, as calculated in accordance with the Delaware General Corporation Law, or, if we do not have a surplus, it is paid out of our net profits for the fiscal year in which the dividend is declared and/or the preceding fiscal year. To the extent we do not have adequate surplus or net profits, we will be prohibited from paying dividends.

***The market price of our common stock may fluctuate significantly, and this may make it difficult for holders to resell our common stock when they want or at prices that they find attractive.***

The price of our common stock on the NASDAQ Global Market constantly changes. We expect that the market price of our common stock will continue to fluctuate. The market price of our common stock may fluctuate as a result of a

variety of factors, many of which are beyond our control. These factors include:

changes in market conditions;

quarterly variations in our operating results;

operating results that vary from the expectations of management, securities analysts and investors;

changes in expectations as to our future financial performance;

announcements of strategic developments, significant contracts, acquisitions and other material events by us or our competitors;

the operating and securities price performance of other companies that investors believe are comparable to us;

**Table of Contents**

future sales of our equity or equity-related securities;

changes in the economy and the financial markets;

departures of key personnel;

changes in governmental regulations; and

geopolitical conditions, such as acts or threats of terrorism, political instability, civil unrest or military conflicts.

In addition, in recent years, global stock markets have experienced extreme price and volume fluctuations. This volatility has had a significant effect on the market price of securities issued by many companies for reasons often unrelated to their operating performance. These broad market fluctuations may adversely affect the market price of our common stock, regardless of our operating results.

**Item 1B. Unresolved Staff Comments**

None.

**Item 2. Properties**

The Company owns or leases the properties described below. The Company believes that its existing facilities are adequate for its operations.

***Dredging***

The Company's headquarters are located at 2122 York Road, Oak Brook, Illinois 60523, with approximately 64,275 square feet of office space that it leases with a term expiring in 2019. As of December 31, 2013 the Company owns or leases the following additional facilities:

***Dredging***

<b>Location</b>	<b>Type of Facility</b>	<b>Size</b>		<b>Leased or Owned</b>
Staten Island, New York	Yard	4.4	Acres	Owned
Morgan City, Louisiana	Yard	6.4	Acres	Owned
Norfolk, Virginia	Yard	15.3	Acres	Owned
Green Cove Springs, Florida	Yard	8.5	Acres	Leased
Norfolk, Virginia	Yard	5.0	Acres	Leased
Chickasaw, AL	Yard	2.0	Acres	Leased

Edgar Filing: Great Lakes Dredge & Dock CORP - Form 10-K

Chesapeake, VA	Storage	2.5	Acres	Leased

\* The environmental & remediation segment leases this facility in Waltham, Massachusetts, from a minority interest owner in Yankee and prior to 2011, a profits interest owner in NASDI, pursuant to a lease that expires in 2016. See Note 13 to the Company's consolidated financial statements.

\*\* The environmental & remediation segment leases the Kalamazoo, Michigan facilities from the President of Terra Contracting Services, LLC who was also the former owner of Terra Contracting, LLC, pursuant to leases expiring in 2015. See Note 13 to the Company's consolidated financial statements.

**Item 3. Legal Proceedings**

Various legal actions, claims, assessments and other contingencies arising in the ordinary course of business are pending against the Company. These matters are subject to many uncertainties, and it is possible that some of these matters could ultimately be decided, resolved, or settled adversely to the Company. Although the Company is subject to various claims and legal actions that arise in the ordinary course of business, except as described below, the Company is not currently a party to any material legal proceedings or environmental claims. The Company records an accrual when it is probable a liability has been incurred and the amount of loss can be reasonably estimated. The Company does not believe any of these proceedings, individually or in the aggregate, would be expected to have a material effect on results of operations, cash flows or financial condition.

In 2009, the Company's subsidiary, NASDI, LLC ( NASDI ), received a letter stating that the Attorney General for the Commonwealth of Massachusetts is investigating alleged violations of the Massachusetts Solid Waste Act. The Company believes that the Massachusetts Attorney General is investigating waste disposal activities at an allegedly unpermitted disposal site owned by a third party with whom NASDI contracted for the disposal of waste in 2007 and 2008. Per the Massachusetts Attorney General's request, NASDI executed a tolling agreement regarding the matter in 2009 and engaged in further discussions with the Massachusetts Attorney General's office. Should a claim be brought, NASDI intends to defend itself vigorously. Based on consideration of all of the facts and circumstances now known, the Company does not believe this claim will have a material impact on its business, financial position, results of operations or cash flows.

In 2011, NASDI received a subpoena from a federal grand jury in the District of Massachusetts directing NASDI to furnish certain documents relating to certain projects performed by NASDI since January 2005. The Company conducted an internal investigation into this matter and has cooperated with the grand jury's investigation. Based on the limited information known to the Company, the Company cannot predict the outcome of the investigation, the U.S. Attorney's views of the issues being investigated, any action the U.S. Attorney may take, or the impact, if any, that this matter may have on the Company's business, financial position, results of operations or cash flows.

On March 19, 2013, the Company and three of its current and former executives were sued in a securities class action in the Northern District of Illinois captioned United Union of Roofers, Waterproofers & Allied Workers Local Union No. 8 v. Great Lakes Dredge & Dock Corporation et al., Case No. 1:13-cv-02115. The lawsuit, which was brought on behalf of all purchasers of the Company's securities between August 7, 2012 and March 14, 2013, primarily alleges that the defendants made false and misleading statements regarding the recognition of revenue in the demolition segment and with regard to the Company's internal control over

**Table of Contents**

financial reporting. This suit was filed following the Company's announcement on March 14, 2013 that it would restate its second and third quarter 2012 financial statements. Two additional, similar lawsuits captioned *Boozer v. Great Lakes Dredge & Dock Corporation et al.*, Case No. 1:13-cv-02339, and *Connors v. Great Lakes Dredge & Dock Corporation et al.*, Case No. 1:13-cv-02450, were filed in the Northern District of Illinois on March 28, 2013, and April 2, 2013, respectively. These three actions were consolidated and recaptioned *In re Great Lakes Dredge & Dock Corporation Securities Litigation*, Case No. 1:13-cv-02115, on June 10, 2013. The plaintiffs filed an amended class action complaint on August 9, 2013, which the defendants moved to dismiss on October 8, 2013. The Company denies liability and intends to vigorously defend this action.

On March 28, 2013, the Company was named as a nominal defendant, and its directors were named as defendants, in a shareholder derivative action in DuPage County Circuit Court in Illinois captioned *Hammoud v. Berger et al.*, Case No. 2013CH001110. The lawsuit primarily alleges breaches of fiduciary duties related to allegedly false and misleading statements regarding the recognition of revenue in the demolition segment and with regard to the Company's internal control over financial reporting, which exposed the Company to securities litigation. A second, similar lawsuit captioned *The City of Haverhill Retirement System v. Leight et al.*, Case No. 1:13-cv-02470, was filed in the Northern District of Illinois on April 2, 2013 and was voluntarily dismissed on June 10, 2013. A third, similar lawsuit captioned *St. Lucie County Fire District Firefighters Pension Trust Fund v. Leight et al.*, Case No. 13 CH 15483, was filed in Cook County Circuit Court in Illinois on July 8, 2013, and has since been transferred to DuPage County Circuit Court and consolidated with the Hammoud action. The Hammoud/St. Lucie plaintiffs have filed a consolidated amended complaint on December 9, 2013, but the action is otherwise stayed until there is a ruling on the motion to dismiss the securities class action. A fourth, similar lawsuit (that additionally named one current and one former executive as defendants) captioned *Griffin v. Berger et al.*, Case No. 1:13-cv-04907, was filed in the Northern District of Illinois on July 9, 2013. The Griffin action is also stayed pending a ruling on the motion to dismiss the securities class action.

In 2012, the Company contracted with a shipyard to perform the functional design drawings, detailed design drawings and follow on construction of a new Articulated Tug & Barge ( ATB ) Trailing Suction Hopper Dredge. In April 2013, the Company terminated the contract with the shipyard for default and the counterparty sent the Company a notice requesting arbitration under the contract on the Company's termination for default, including but not limited to the Company's right to draw on letters of credit that had been issued by the shipyard as financial security required in the contract. In May 2013, the Company drew upon the shipyard's letters of credit related to the contract and received \$13.6 million. Arbitration proceedings were initiated. In January 2014, the Company and the shipyard executed a settlement agreement pursuant to which the Company retained \$10.5 million of the proceeds of the financial security and remitted \$3.1 million of those funds to the shipyard, all other claims were released, and the arbitration was dismissed with prejudice.

The Company has not accrued any amounts with respect to the above matters as the Company does not believe, based on information currently known to it, that a loss relating to these matters is probable, and an estimate of a range of potential losses relating to these matters cannot reasonably be made.

**Table of Contents****Part II****Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities****Market Information**

Our common stock is traded under the symbol "GLDD" on the NASDAQ Global Market. The table below sets forth, for the calendar quarters indicated, the high and low sales prices of the common stock as reported by NASDAQ from January 1, 2012 through December 31, 2013.

	<b>Common Stock</b>	
	<b>High</b>	<b>Low</b>
First Quarter 2012	\$ 7.82	\$ 5.65
Second Quarter 2012	\$ 7.62	\$ 6.14
Third Quarter 2012	\$ 7.90	\$ 6.94
Fourth Quarter 2012	\$ 9.24	\$ 6.94

	<b>Common Stock</b>	
	<b>High</b>	<b>Low</b>
First Quarter 2013	\$ 8.69	\$ 6.55
Second Quarter 2013	\$ 8.66	\$ 6.30
Third Quarter 2013	\$ 8.69	\$ 6.28
Fourth Quarter 2013	\$ 9.33	\$ 6.99

**Table of Contents**

	12/31/2009	12/31/2010	12/31/2011	12/31/2012	12/31/2013
Great Lakes Dredge & Dock Corp	158.33	182.34	139.47	232.42	239.45
Peer Average (see below)	121.32	124.01	110.66	132.91	191.68
NASDAQ Composite Index	143.89	168.22	165.19	191.47	264.84

The graph above shows the cumulative total return to stockholders of the Company's common stock during a five year period ending December 31, 2013, the last trading day of our 2013 fiscal year, compared with the return on the NASDAQ Composite Index and a group of our peers which we use internally as a benchmark for our performance. The graph assumes initial investments of \$100 each on December 31, 2008, in GLDD stock (assuming reinvestment of all dividends paid during the period), the NASDAQ Composite Index and the peer group companies, collectively. The peer group is comprised of the following member companies against which we measure our performance for compensation purposes.

Company	Ticker
Dycom Industries, Inc.	DY
Global Industries, Ltd. (prior to its purchase on September 9, 2011 by Technip S.A.)	GLBL
Granite Construction Inc.	GVA
Aegion Corporations, successor to Insituform Technologies, Inc.	AEGN
Layne Christensen Company	LAYN
MasTec, Inc.	MTZ
Matrix Service Company	MTRX
MYR Group Inc.	MYRG
Orion Marine Group, Inc.	ORN
Pike Electric Corporation	PIKE
Primoris Services Corp	PRIM
Sterling Construction Company, Inc.	STRL
Team, Inc.	TISI
Willbros Group, Inc.	WG

Given the integral nature of this peer group for compensation purposes and the fact that each peer is a capital intensive business, the Company deems it appropriate to also use this peer group for showing the comparative cumulative total return to stockholders of Great Lakes.

**Holders of Record**

As of February 28, 2014, the Company had approximately 34 shareholders of record of the Company's common stock. A substantial number of holders of the Company's common stock are street name or beneficial holders, whose shares are held of record by banks, brokers and other financial institutions.

**Dividends**

Quarterly dividends per common share for the most recent two years were as follows:

	<b>Dividend</b>	
	<b>2013</b>	<b>2012</b>
First Quarter	\$	\$ 0.021
Second Quarter	\$	\$ 0.021
Third Quarter	\$	\$ 0.021
Fourth Quarter	\$	\$ 0.250*

\* Represents a special cash dividend

**Table of Contents**

In the fourth quarter of 2012, the board of directors issued a special dividend representing quarterly dividends that likely would have been declared in fourth quarter 2012 as well as the acceleration of dividends for four quarters of 2013 plus an additional return of capital. The declaration and payment of future dividends will be at the discretion of Great Lakes' board of directors and depends on many factors, including general economic and business conditions, the Company's strategic plans, financial results and condition, legal requirements including restrictions and limitations contained in the Company's senior credit agreement, bonding agreements and the indenture relating to the senior unsecured notes and other factors the board of directors deems relevant. Accordingly, the Company cannot ensure the size of any such dividend or that the Company will pay any future dividend.

**Table of Contents****Item 6. Selected Financial Data**

The following table sets forth selected financial data and should be read in conjunction with Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations and the Company's audited consolidated financial statements and notes thereto included elsewhere in this annual report. The selected financial data presented below have been derived from the Company's consolidated financial statements; items may not sum due to rounding.

## **Table of Contents**

### **Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations Overview**

The Company is the largest provider of dredging services in the United States. In addition, the Company is the only U.S. dredging service provider with significant international operations, which represented 22% of its dredging revenues for 2013.

Dredging generally involves the enhancement or preservation of the navigability of waterways or the protection of shorelines through the removal or replenishment of soil, sand or rock. The U.S. dredging market consists of three primary types of work: capital, coastal protection (formerly referred to as beach nourishment) and maintenance. Capital dredging consists primarily of port expansion projects, which involve the deepening of channels to allow access by larger, deeper draft ships and the provision of land fill used to expand port facilities. In addition to port work, capital projects also include land reclamations, trench digging for pipelines, tunnels, and cables, and other dredging related to the construction of breakwaters, jetties, canals and other marine structures. Coastal protection projects involve moving sand from the ocean floor to shoreline locations where erosion threatens shoreline assets. Maintenance dredging consists of the re-dredging of previously deepened waterways and harbors to remove silt, sand and other accumulated sediments. Due to natural sedimentation, most channels generally require maintenance dredging every one to three years, thus creating a recurring source of dredging work that is typically non-deferrable if optimal navigability is to be maintained. In addition, severe weather such as hurricanes, flooding and droughts can also cause the accumulation of sediments and drive the need for maintenance dredging. Rivers & lakes dredging and related operations typically consist of lake and river dredging, inland levee and construction dredging, environmental restoration and habitat improvement and other marine construction projects.

On December 31, 2012, the Company acquired the assets and assumed certain liabilities of Terra Contracting, LLC (Terra), a respected provider of a wide variety of essential services for environmental, maintenance and infrastructure-related applications headquartered in Kalamazoo, MI, for a purchase price of approximately \$26 million. The Terra acquisition has broadened the Company's environmental & remediation segment with additional services and expertise as well as expanded its footprint in the Midwest.

In the fourth quarter 2013, the management team proposed, and the board of directors approved, a plan to sell the Company's historical demolition business. The Company has received several indications of interest and expects to finalize disposition of the demolition business in 2014. The historical demolition business has been retrospectively presented as discontinued operations and is no longer reflected in continuing operations, see Note 14 to our consolidated financial statements included in Item 15 of this Annual Report on Form 10-K.

The Company's bid market is defined as the aggregate dollar value of domestic dredging projects on which the Company bid or could have bid if not for capacity constraints (bid market). The Company experienced an average combined bid market share in the U.S. of 37% over the prior three years, including 29%, 60% and 31% of the domestic capital, coastal protection and maintenance sectors, respectively. The Company's average bid market share of rivers & lakes in the two years of activity since its acquisition is 43%.

The Company operates in two reportable segments: dredging and environmental & remediation.

In 2013, dredging revenues accounted for 87% of revenue. The Company's fleet of 32 dredges, of which nine are deployed internationally, 19 material transportation barges, two drillboats, and numerous other specialized support vessels is the largest and most diverse fleet of any U.S. dredging company. For the dredging segment, the Company's fleet of dredging equipment can be utilized on one or many types of work and in various geographic locations. This flexible approach to the Company's fleet utilization, driven by the project scope and equipment, enables us to move

equipment in response to changes in demand for dredging services to take advantage of the most attractive opportunities. The Company estimates the replacement cost of the Company's fleet to be in excess of \$1.5 billion in the current market.

## **Table of Contents**

The Company's largest domestic dredging customer is the U.S. Army Corps of Engineers (the Corps), which has responsibility for federally funded projects related to navigation and flood control of U.S. waterways. The advance of multi-jurisdictional cost sharing arrangements are allowing the Corps to utilize funds from sources other than the federal budget to prioritize additional projects where waterway infrastructure improvements can have an impact to large regions. Although some of a project's funding may ultimately be derived from multiple sources, the Corps maintains the authority over the project and is the Company's customer. In 2013, the Company's dredging revenues earned from contracts with federal government agencies, including the Corps as well as other federal entities such as the U.S. Coast Guard and the U.S. Navy, were approximately 51% of dredging revenues, down slightly from the Company's prior three year average of 62%.

In 2013, environmental & remediation revenues accounted for 13% of total revenue. The environmental & remediation segment's principal services consist of specialty contracting services such as environmental, industrial and hazard materials abatement and remediation services. The majority of the environmental & remediation segment's work is performed in the Midwest U.S. market.

The Company also owns 50% of Amboy Aggregates (Amboy) and 50% of TerraSea Environmental Solutions (TerraSea) as joint ventures. Amboy's primary business is dredging sand from the entrance channel to the New York harbor in order to provide sand and aggregate for use in road and building construction and for clean land fill. Amboy also imports stone from upstate New York and Nova Scotia and distributes it throughout the New York area. TerraSea is engaged in the environmental services business through its ability to remediate contaminated soil and dredged sediment treatment.

## **Contract Revenues**

Most of the Company's dredging contracts are obtained through competitive bidding on terms specified by the party inviting the bid. The types of equipment required to perform the specified service and the estimated project duration affect the cost of performing the contract and the price that dredging contractors will bid.

The Company recognizes contract revenues under the percentage-of-completion method based on the Company's engineering estimates of the physical percentage completed for dredging projects and based on costs incurred to date compared to total estimated costs for environmental projects. For dredging projects, costs of contract revenues are adjusted to reflect the gross profit percentage expected to be achieved upon ultimate completion of each dredging project. For environmental & remediation projects, contract revenues are adjusted to reflect the estimated gross profit percentage. Provisions for estimated losses on contracts in progress are made in the period in which such losses are determined. Change orders are not recognized in revenue until the recovery is probable and collectability is reasonably assured. Claims for additional compensation due to the Company are not recognized in contract revenues until such claims are settled. Billings on contracts are generally submitted after verification with the customers of physical progress and may not match the timing of revenue recognition. The difference between amounts billed and recognized as revenue is reflected in the balance sheet as either contract revenues in excess of billings or billings in excess of contract revenues. Contract modifications may be negotiated when a change from the original contract specifications is encountered, necessitating a change in project scope or performance methodology and/or material disposal. Significant expenditures incurred incidental to major contracts are deferred and recognized as contract costs based on contract performance over the duration of the related project. These expenditures are reported as prepaid expenses.

## **Costs and Expenses**

The components of costs of contract revenues include labor, equipment (including depreciation, maintenance, insurance and long-term rentals), fuel, subcontracts, short-term rentals and project overhead. Hourly labor is generally

hired on a project-by-project basis. Much of our domestic hourly labor force is represented by labor unions with collective bargaining agreements that expire at various dates during 2014 through 2016, which historically have been extended without disruption.

## **Table of Contents**

Costs of contract revenues vary significantly depending on the type and location of work performed and assets utilized. Generally, capital dredging projects have the highest margins due to the complexity of the projects, while coastal protection projects have the most volatile margins because they are most often exposed to variability in weather conditions.

The Company's cost structure includes significant annual equipment related costs, including depreciation, maintenance, insurance and long-term equipment rentals, averaging approximately 20% to 23% of total costs of contract revenues over the prior three years. During the year, both equipment utilization and the timing of cost expenditures fluctuate significantly. Accordingly, the Company allocates these equipment costs to interim periods in proportion to revenues recognized over the year to better match revenues and expenses. Specifically, at each interim reporting date the Company compares actual revenues earned to date on the Company's dredging contracts to expected annual revenues and recognizes equipment costs on the same proportionate basis. In the fourth quarter, any over or under allocated equipment costs are recognized such that the expense for the year equals actual equipment costs incurred during the year. As a result of this methodology, the recorded expense in any interim period may be higher or lower than the actual equipment costs incurred in that interim period.

## **Primary Factors that Determine Operating Profitability**

*Dredging.* The Company's results of operations for its dredging segment for a calendar or quarterly period are generally determined by the following three factors:

*Bid wins and dredge employment* The Company's dredging segment generates revenues when the Company wins a bid for a dredging contract and starts that project. Although the Company's dredging equipment is subject to downtime for scheduled periodic maintenance and repair, the Company seeks to maximize its revenues by employing its dredging equipment on a full-time basis. If a dredge is idle (i.e., the dredge is not employed on a dredging project or undergoing scheduled periodic maintenance and repair), the Company does not earn revenue with respect to that dredge during the time period for which it is idle.

*Project and dredge mix* The Company's domestic dredging projects generally involve domestic capital, maintenance and coastal protection work and its foreign dredging projects generally involve capital work. In addition, the Company's dredging projects vary in duration and, in general, projects of longer duration result in less dredge downtime in a given period. Moreover, the Company's dredges have different physical capabilities and typically work on certain types of dredging projects. Accordingly, the Company's dredges have different daily revenue generating capacities.

The Company generally expects to achieve different levels of gross profit margin (i.e., gross profit divided by revenues) for work performed on the different types of dredging projects and for work performed by different types of dredges. The Company's expected gross margin for a project is based upon the Company's estimates at the time of the bid. Although the Company seeks to bid on and win projects that will maximize its gross margin, the Company cannot control the type of dredging projects that are available for bid from time to time, the type of dredge that is needed to complete these projects or the time schedule upon which these projects are required to be completed. As a result, in some quarters the Company works on a mix of dredging projects that, in the aggregate, have relatively high expected gross margins (based on project type and dredges employed) and in other quarters, the Company works on a mix of dredging projects that, in the aggregate, have relatively low expected gross margins (based on project type and dredges employed).

*Project execution* The Company seeks to execute all of its dredging projects consistent with its project estimates. In general, the Company's ability to achieve its project estimates depends upon many factors including weather, variances from estimated project conditions, equipment mobilization time periods, unplanned equipment downtime or other events or circumstances beyond the Company's control. If the Company experiences any of these events and circumstances, the completion of a dredging project will often be accelerated or delayed, as applicable, and, consequently, the Company

---

## **Table of Contents**

will experience project results that are better or worse than its estimates. The Company does its best to estimate for events and circumstances that are not within its control; however, these situations are inherent in dredging.

*Environmental & remediation.* The Company's environmental & remediation segment generates revenues when the Company is awarded a contract for specialty contracting services and starts the project. The Company's revenues from its environmental & remediation segment increase or decrease based upon market demand. Like the Company's dredging segment, results of operations for the Company's environmental & remediation segment fluctuate based upon project mix and the Company's ability to execute its projects consistent with its estimates.

## **Critical Accounting Policies and Estimates**

Our significant accounting policies are discussed in the Notes to the consolidated financial statements. The application of certain of these policies requires significant judgments or an estimation process that can affect the Company's results of operations, financial position and cash flows, as well as the related footnote disclosures. The Company bases its estimates on historical experience and other assumptions that it believes are reasonable. If actual amounts are ultimately different from previous estimates, the revisions are included in the Company's results of operations for the period in which the actual amounts become known. The following accounting policies comprise those that management believes are the most critical to aid in fully understanding and evaluating the Company's reported financial results.

*Percentage-of-completion method of revenue recognition* The Company's contract revenues are recognized under the percentage-of-completion method, which is by its nature based on an estimation process. For dredging projects, the Company uses engineering estimates of the physical percentage of completion. For environmental & remediation projects, the Company uses estimates of costs incurred to date compared to total estimated costs to determine the percentage of project completion. In preparing estimates, the Company draws on its extensive experience in the dredging and environmental & remediation businesses and its database of historical dredging information to ensure that its estimates are as accurate as possible, given current circumstances. Provisions for estimated losses on contracts in progress are made in the period in which such losses are determined. Change orders are not recognized in revenue until the recovery is probable and collectability is reasonably assured. Claims for additional compensation are not recognized in contract revenues until such claims are settled. Cost and profit estimates are reviewed on a periodic basis to reflect changes in expected project performance.

*Impairment of goodwill* Goodwill is tested for impairment at the reporting unit level on an annual basis and between annual tests if an event occurs or circumstances change that would more likely than not reduce the fair value of the reporting unit below its carrying value. The Company believes that this estimate is a critical accounting estimate because: (i) goodwill is a material asset and (ii) the impact of an impairment could be material to the consolidated balance sheet and consolidated statement of operations. The Company performs its annual impairment test as of July 1 each year. The Company operates in two reportable segments: dredging and environmental & remediation. Four operating segments were aggregated into two reportable segments as the segments have similarity in economic margins, services, production processes, customer types, distribution methods and regulatory environment. The Company has determined that the operating segments are the Company's four reporting units.

The Company assesses the fair values of its reporting units using both a market-based approach and an income-based approach. Under the income approach, the fair value of the reporting unit is based on the present value of estimated future cash flows. The income approach is dependent on a number of factors, including estimates of future market growth trends, forecasted revenues and expenses based upon historical operating data, appropriate discount rates and other variables. The estimates are based on assumptions that the Company believes to be reasonable, but such assumptions are subject to unpredictability and uncertainty. Changes in these estimates and assumptions could

materially affect the determination of fair value, and may result in the impairment of goodwill in the event that actual results differ from those estimates.

**Table of Contents**

The market approach measures the value of a reporting unit through comparison to comparable companies. Under the market approach, the Company uses the guideline public company method by applying estimated market-based enterprise value multiples to the reporting unit's estimated revenue and Adjusted EBITDA. The Company analyzed companies that performed similar services or are considered peers. Due to the fact that there are no public companies that are direct competitors, the Company weighed the results of this approach less than the income approach.

In the second quarter of 2013, due to a decline in the overall financial performance and declining cash flows of the demolition reporting unit, the Company recorded an impairment charge of \$21.5 million. See Note 5 in the Company's consolidated financial statements. At both December 31, 2013 and 2012, the dredging segment's goodwill was \$76.6 million. At December 31, 2013 and 2012, the environmental & remediation segment's goodwill was \$2.8 million.

**Results of Operations Fiscal Years Ended December 31, 2013, 2012 and 2011**

The following table sets forth the components of net income attributable to common stockholders of Great Lakes Dredge & Dock Corporation and Adjusted EBITDA from continuing operations, as defined below, as a percentage of contract revenues for the years ended December 31:

	<b>2013</b>	<b>2012</b>	<b>2011</b>
Contract revenues	100.0%	100.0%	100.0%
Costs of contract revenues	(86.3)	(86.7)	(84.1)
Gross profit	13.7	13.3	15.9
General and administrative expenses	(9.3)	(7.8)	(7.9)
Proceeds from loss of use claim	1.8		
Gain on sale of assets - net	0.8		2.3
Operating income	7.0	5.5	10.3
Interest expense - net	(3.0)	(3.6)	(4.1)
Equity in earnings (loss) of joint ventures	0.2		(0.1)
Loss on foreign currency transactions - net			(0.1)
Loss on extinguishment of debt			(1.0)
Income from continuing operations before income taxes	4.2	1.9	5.0
Income tax provision	(1.4)	(0.9)	(1.9)
Income from continuing operations	2.8	1.0	3.1
Loss from discontinued operations, net of income taxes	(7.5)	(1.6)	0.2
Net income (loss)	(4.7)	(0.6)	3.3
Net (income) loss attributable to noncontrolling interests	0.1	0.1	(0.1)
Net income (loss) attributable to common stockholders of Great Lakes Dredge & Dock Corporation	(4.6)%	(0.5)%	3.2%
Adjusted EBITDA from continuing operations	13.5%	12.7%	17.3%

**Adjusted EBITDA from continuing operations**

Adjusted EBITDA from continuing operations, as provided herein, represents net income attributable to common stockholders of Great Lakes Dredge & Dock Corporation, adjusted for net interest expense, income taxes, depreciation and amortization expense, debt extinguishment and accelerated maintenance expense for new international deployments. In 2012, the Company modified the Adjusted EBITDA from continuing operations calculation for accelerated maintenance expense for new international deployments that are not directly recoverable under the related dredging contract and are therefore expensed as incurred. The Company does not

**Table of Contents**

frequently incur significant accelerated maintenance as a part of its international deployments. As such, the exclusion of these accelerated maintenance expenses from the calculation of Adjusted EBITDA from continuing operations allows users of the financial statements to more easily compare our year-to-year results. Adjusted EBITDA from continuing operations is not a measure derived in accordance with accounting principles generally accepted in the United States of America ( GAAP ). The Company presents Adjusted EBITDA from continuing operations as an additional measure by which to evaluate the Company s operating trends. The Company believes that Adjusted EBITDA from continuing operations is a measure frequently used to evaluate performance of companies with substantial leverage and that the Company s primary stakeholders (i.e., its stockholders, bondholders and banks) use Adjusted EBITDA from continuing operations to evaluate the Company s period to period performance. Additionally, management believes that Adjusted EBITDA from continuing operations provides a transparent measure of the Company s recurring operating performance and allows management to readily view operating trends, perform analytical comparisons and identify strategies to improve operating performance. For this reason, the Company uses a measure based upon Adjusted EBITDA from continuing operations to assess performance for purposes of determining compensation under the Company s incentive plan. Adjusted EBITDA should not be considered an alternative to, or more meaningful than, amounts determined in accordance with GAAP including: (a) operating income as an indicator of operating performance; or (b) cash flows from operations as a measure of liquidity. As such, the Company s use of Adjusted EBITDA from continuing operations, instead of a GAAP measure, has limitations as an analytical tool, including the inability to determine profitability or liquidity due to the exclusion of accelerated maintenance expense for new international deployments, interest and income tax expense and the associated significant cash requirements and the exclusion of depreciation and amortization, which represent significant and unavoidable operating costs given the level of indebtedness and capital expenditures needed to maintain the Company s business. For these reasons, the Company uses operating income to measure the Company s operating performance and uses Adjusted EBITDA from continuing operations only as a supplement. The following is a reconciliation of Adjusted EBITDA from continuing operations to net income attributable to common stockholders of Great Lakes Dredge & Dock Corporation:

	<b>Year Ended December 31,</b>		
	<b>2013</b>	<b>2012</b>	<b>2011</b>
	<b>(in thousands)</b>		
Net income (loss) attributable to common stockholders of Great Lakes Dredge & Dock Corporation	\$ (34,361)	\$ (2,695)	\$ 16,528
Income (loss) from discontinued operations, net of income taxes	(54,850)	(9,635)	922
Net (income) loss attributable to noncontrolling interest	632	645	(723)
Income from continuing operations	19,857	6,295	16,329
Adjusted for:			
Accelerated maintenance expenses		4,672	
Loss on extinguishment of debt			5,145
Interest expense net	21,941	20,925	21,373
Income tax provision	10,460	5,419	9,944
Depreciation and amortization	46,622	37,430	37,282
Adjusted EBITDA from continuing operations	\$ 98,880	\$ 74,741	\$ 90,073

**Table of Contents****Components of Contract Revenues**

The following table sets forth, by segment and type of work, the Company's contract revenues for the years ended December 31 (in thousands):

<b>Revenues</b>	<b>2013</b>	<b>2012</b>	<b>2011</b>
<b>Dredging:</b>			
Capital U.S.	\$ 153,781	\$ 175,317	\$ 156,251
Capital foreign	138,436	112,242	77,232
Coastal protection	228,868	126,873	135,164
Maintenance	90,833	137,924	116,016
Rivers & lakes	30,684	35,873	35,471
<b>Total dredging revenues</b>	<b>642,602</b>	<b>588,229</b>	<b>520,134</b>
Environmental & remediation*	94,840	201	
Intersegment revenue	(6,024)		
<b>Total revenues</b>	<b>\$ 731,418</b>	<b>\$ 588,430</b>	<b>\$ 520,134</b>

\* Environmental & remediation revenue in 2013 includes Terra which did not operate as part of the Company prior to January 1, 2013.

**Year Ended December 31, 2013 Compared to Year Ended December 31, 2012**

Total revenue was \$731.4 million in 2013, an increase of \$143.0 million, or 24.3%, from 2012 total revenue of \$588.4 million. The increase was largely attributable to the acquisition of our Terra business and higher coastal protection revenue, which included emergency and supplemental work as a result of Superstorm Sandy. Foreign capital dredging revenue contributed to the increase driven by significant projects in Qatar and Brazil as well as the Wheatstone LNG Project in Western Australia. The increases in total revenue were partially offset by declines in domestic capital dredging, maintenance dredging, and river & lakes revenues. The Company categorizes revenue by service type to understand the market in which the Company operates and to assess how the Company is performing on bidding work or projects and is generating revenue from backlog.

Revenues from domestic capital dredging projects of \$153.8 million in 2013 decreased \$21.5 million, or 12.3%, from 2012 revenues of \$175.3 million. The decrease in domestic capital dredging revenue was primarily attributable a greater amount of deepening work performed in New York and New Jersey in 2012 as well as a large project in Florida that did not reoccur in 2013. These decreases were partially offset by coastal restoration projects in Louisiana that added \$78.7 million to domestic capital dredging revenue in the current year, compared to \$58.4 million in the prior year. The preliminary stages of the PortMiami deepening project also contributed to revenue in 2013. In 2013, the Company earned 100% of its backlog carried forward from December 31, 2012.

Revenues from foreign dredging operations in 2013 totaled \$138.4 million, an increase of \$26.2 million, or 23.3%, from 2012 revenues of \$112.2 million. Foreign dredging revenue was driven by a significant project in Qatar as well as mobilization and commencement of dredging activities for the Wheatstone LNG Project in Western Australia and a project in Brazil. These three contracts in our foreign operations comprise approximately 85% of the foreign dredging

revenue earned.

Revenues from coastal protection projects of \$228.9 million in 2013 increased \$102.0 million, or 80.4%, from \$126.9 million in 2012. The significant increase in coastal protection revenue is mainly attributable projects in New York and New Jersey, which included emergency work as well as supplemental work as a result of Superstorm Sandy. Additionally the Company worked on large beach projects in Florida, North Carolina and Delaware. The Company converted 90% of the backlog at December 31, 2012 into revenues during 2013. In 2012, less coastal protection projects were let to bid and those projects were awarded later in the year causing fewer days in which to earn revenue.

---

**Table of Contents**

Revenues from maintenance dredging projects in 2013 were \$90.8 million, a decrease of \$47.1 million, or 34.1%, from \$137.9 million in 2012. The Company performed a greater amount of harbor work in 2012 that was not repeated in 2013. Additionally, several large maintenance projects in Louisiana did not reoccur in 2013. The Company executed substantially all its backlog from 2012. The Company worked on projects in Florida, Maryland, Georgia and Tennessee.

Revenues from rivers & lakes projects were \$30.7 million for 2013, a decrease of \$5.2 million, or 14.5%, from \$35.9 million in 2012. The decrease in rivers & lakes revenue was attributable to projects in Mississippi and along the Mississippi River that did not reoccur in 2013. During 2013, Rivers & lakes teamed with Terra on a remediation project in the Midwest and continued work on its large municipal lake project in Texas.

The environmental & remediation segment recorded revenues in 2013 of \$94.8 million. Revenue was driven by our Terra business which did not operate as part of the Company prior to January 1, 2013. Environmental & remediation revenue also includes work performed on a large brownfield remediation project in New Jersey.

Dredging segment gross profit in 2013 increased 8.8% to \$85.2 million from \$78.3 million in 2012, and dredging segment gross profit margin (dredging gross profit divided by dredging revenue) was 13.3% in 2013, consistent with 2012. Gross profit margin was up primarily due to our Wheatstone LNG Project in Australia. This increase was partially offset by lower domestic capital dredging gross profit.

Environmental & remediation segment gross profit was \$15.1 million in 2013 with a gross profit margin of 15.9%. The gross profit margin was mainly attributable to our acquisition of the Terra business which did not become part of the Company until the first quarter of 2013. During the year, the Company worked on two environment remediation projects with strong margins.

Dredging segment operating income for 2013 increased 66.2% to \$54.7 million, from \$32.9 million in 2012 due to the higher gross profit described above, the receipt of the proceeds from the dredge *New York* loss of use claim, as described below, and \$5.8 million of gains in 2013 from the sales of underutilized assets. The increase in dredging segment operating income was partially offset by an increase in general and administrative expenses, specifically related to payroll, legal and professional fees and technical and consulting fees in 2013.

In May 2013, the Company concluded its litigation regarding the dredge *New York* loss of use claim. In January 2008, the Company filed suit against the M/V *Orange Sun* and her owners for damages incurred by the Company in connection with the allision in the approach channel to Port Newark, New Jersey. The Company received \$13.3 million which is included in proceeds from loss of use claim in the consolidated statement of operations for the year ended December 31, 2013.

Environmental & remediation segment operating loss was \$3.3 million for 2013. This loss was driven by general and administrative expenses of which \$8.4 million related to the Terra business acquired on December 31, 2012.

The Company's net interest expense for 2013 totaled \$21.9 million compared with \$20.9 million in 2012. The slight increase is primarily due to interest related to the Company's borrowings under the revolving credit facility.

Income tax expense in 2013 was \$10.5 million compared to \$5.4 million in 2012. This \$5.1 million increase is primarily the result of the improved operating income in 2013. The effective tax rate for the year ended December 31, 2013 was 34.5% compared to 46.3% for the year ended December 31, 2012. The reduction in the effective tax rate is primarily attributable to additional benefits in 2013 from state income tax and research and development credits.

Edgar Filing: Great Lakes Dredge & Dock CORP - Form 10-K

For the year ended December 31, 2013, net income from continuing operations was \$19.9 million compared to net income from continuing operations of \$6.3 million for the year ended December 31, 2012. This \$13.6 million increase was primarily driven by the higher dredging operating income, as described above.

## **Table of Contents**

Adjusted EBITDA from continuing operations (as defined on page 43) was \$98.9 million and \$74.7 million for the years ended December 31, 2013 and 2012, respectively. The increase of \$24.2 million, or 32.4%, is related to the increase in dredging segment operating income described above. In 2013, the Company recorded \$46.6 million of depreciation and amortization expense that is included as a component of operating income, but is excluded for the purposes of calculating Adjusted EBITDA from continuing operations. The depreciation and amortization expense recorded in 2012 was \$37.4 million. In 2013, the Company incurred \$2.4 million of additional depreciation and amortization from the Terra business and \$5.8 million of additional depreciation at the dredging segment for the capital expenditures from the prior year. During 2012, the Company incurred \$4.7 million of accelerated maintenance expenses related to preparation of vessels for the Wheatstone project in Australia that are recognized in the Company's operating income. The Company does not frequently incur significant accelerated maintenance as a part of its international deployments. We have therefore excluded these accelerated maintenance expenses from the calculation of Adjusted EBITDA from continuing operations.

### **Year Ended December 31, 2012 Compared to Year Ended December 31, 2011**

Total revenue was \$588.4 million in 2012, an increase of \$68.3 million, or 13.1%, from 2011 total revenue of \$520.1 million. Higher domestic and foreign capital dredging revenue as well as maintenance revenues were driven by strong execution on prior year backlog and early stages of mobilization for the Wheatstone LNG project in Western Australia. The increases in total revenue were partially offset by declines in coastal protection revenues with fewer contracts performed in 2012 as compared to the larger than normal number of contracts performed in 2011.

Revenues from domestic capital dredging projects of \$175.3 million in 2012 increased \$19.0 million, or 12.2%, from 2011 revenues of \$156.3 million. The Company executed substantially all of its entire backlog from 2011 in addition to 82% of the awards won in 2012. Coastal restoration projects in Louisiana added \$58.4 million to domestic capital dredging revenue in the current year, compared to \$2.2 million in the prior year. This increase was partially offset by a greater number of domestic capital projects worked in the prior year, including the remaining work on the construction of sand berms off the coast of Louisiana, which accounted for approximately \$20.6 million of 2011 revenue that did not reoccur in 2012.

Revenues from foreign dredging operations in 2012 totaled \$112.2 million, an increase of \$35.0 million, or 45.3%, from 2011 revenues of \$77.2 million. 2012 foreign revenue was driven higher with a greater number of large value contracts earned in our Middle East business and early stages of mobilization for the Wheatstone LNG project in Western Australia. Four contracts in our foreign operations comprised over 90% of the revenue earned in 2012.

Revenues from coastal protection projects of \$126.9 million in 2012 decreased \$8.3 million, or 6.1%, from \$135.2 million in 2011. A significant increase in coastal protection projects were bid and awarded in 2011. The Company was able to convert a portion of these prior year awards into revenue in 2011 as the dredging work was performed and revenue was earned. In 2012, less bids for coastal protection were let to bid and they were awarded later in year causing fewer days in which to earn revenue. Additionally, the Company performed emergency work in New York City after Superstorm Sandy that deferred some of the ongoing coastal protection projects.

Revenues from maintenance dredging projects in 2012 were \$137.9 million, an increase of \$21.9 million, or 18.9%, from \$116.0 million in 2011. The Company performed a greater number of contracts at a larger dollar value in 2012 as compared to the prior year. An increased backlog at December 31, 2011 combined with larger dollar value of contracts awarded and strong execution contributed to increase the revenue from maintenance dredging year over year. This increase in revenue was partially muted by atypically high revenue in the first half of 2011 as the Company performed maintenance projects that had been delayed from 2010.

**Table of Contents**

Revenues from rivers & lakes projects were \$35.9 million for 2012, an increase of \$0.4 million, or 1.1%, from \$35.5 million in 2011. Revenues were in line with the prior year as there was a slight rise in the number of contracts performed, especially for projects on the Mississippi River, which were offset by shorter length and lower value contracts than the prior year.

The environmental & remediation segment includes our Terra business which did not operate as part of the Company prior to January 1, 2013. The historical demolition and site preparation businesses are a reporting unit of the environmental & remediation segment, but are classified as discontinued and are currently held for sale.

Operating income for 2012 decreased 39.1% to \$32.6 million, from \$53.5 million in 2011 due to the lower gross profit described above, \$11.7 million of gains in the prior year from sales of underutilized assets, and higher general and administrative expenses. The prior year also included \$2.2 million of amortization of intangibles from the Rivers & lakes acquisition that were fully amortized by the current year and partially offset the higher expenses.

The Company's net interest expense for 2012 totaled \$20.9 million compared with \$21.4 million in 2011. This decrease is primarily due to the Company's issuance of \$250 million of 7.375% senior notes and the related redemption of the Company's \$175 million of 7.75% senior subordinated notes in the 2011 first quarter. Due to timing requirements, both of these note issuances were outstanding and accruing interest for approximately 30 days in 2011, resulting in duplicative interest expense of approximately \$1.1 million. In addition, in 2012 the Company realized a \$0.1 million gain on interest rate swaps, while 2011 included a \$0.4 million gain. Income tax expense in 2012 was \$5.4 million compared to \$9.9 million in 2011. This \$4.5 million decrease is primarily the result of the decrease in the Company's operating income. The effective tax rate for the year ended December 31, 2012 was 46.3% compared to 37.8% for the year ended December 31, 2011.

For the year ended December 31, 2012, net income from continuing operations was \$11.7 million compared to net income from continuing operations of \$26.3 million for the year ended December 31, 2011. This \$14.6 million decrease was primarily driven by the lower operating income, net of taxes in 2012 as described above.

Adjusted EBITDA from continuing operations (as defined on page 37) was \$74.7 million and \$90.1 million for the years ended December 31, 2012 and 2011, respectively. The decrease of \$15.4 million, or 17.1%, is related to the decrease in dredging segment operating income described above. In 2012, the Company recorded \$37.4 million of depreciation and amortization expense that is included as a component of operating income, but is excluded for the purposes of calculating Adjusted EBITDA from continuing operations. The depreciation and amortization expense recorded in 2011 was \$37.3 million. During 2012, the Company incurred \$4.7 million of accelerated maintenance expenses related to preparation of vessels for the Wheatstone project in Australia that are recognized in the Company's operating income. The Company does not frequently incur significant accelerated maintenance as a part of its international deployments. We have therefore excluded these accelerated maintenance expenses from the calculation of Adjusted EBITDA from continuing operations.

**Table of Contents****Bidding Activity and Backlog**

The following table sets forth, by segment and type of dredging work, the Company's backlog as of the dates indicated (in thousands):

<b>Backlog</b>	<b>December 31, 2013</b>	<b>December 31, 2012</b>	<b>December 31, 2011</b>
<b>Dredging:</b>			
Capital U.S.	\$ 176,117	\$ 43,177	\$ 109,897
Capital foreign	98,666	218,953	78,379
Coastal protection	143,498	80,245	84,607
Maintenance	70,633	22,406	31,293
Rivers & lakes	26,158	24,510	15,256
<b>Dredging Backlog</b>	<b>515,072</b>	<b>389,291</b>	<b>319,432</b>
Environmental & remediation	28,330	31,006	
<b>Total Backlog</b>	<b>\$ 543,402</b>	<b>\$ 420,297</b>	<b>\$ 319,432</b>

December 31, 2012 environmental & remediation backlog includes backlog acquired by the Company on December 31, 2012 in connection with the Terra acquisition.

The Company's contract backlog represents its estimate of the revenues that will be realized under the portion of the contracts remaining to be performed. For dredging contracts these estimates are based primarily upon the time and costs required to mobilize the necessary assets to and from the project site, the amount and type of material to be dredged and the expected production capabilities of the equipment performing the work. For environmental & remediation contracts, these estimates are based on the time and remaining costs required to complete the project relative to total estimated project costs and project revenues agreed to with the customer. However, these estimates are necessarily subject to variances based upon actual circumstances. Because of these factors, as well as factors affecting the time required to complete each job, backlog is not necessarily indicative of future revenues or profitability. Also, 75% of the Company's 2013 dredging backlog relates to federal government contracts, which can be canceled at any time without penalty to the government, subject to the Company's contractual right to recover the Company's actual committed costs and profit on work performed up to the date of cancellation. The Company's backlog may fluctuate significantly from quarter to quarter based upon the type and size of the projects the Company is awarded from the bid market. A quarterly increase or decrease of the Company's backlog does not necessarily result in an improvement or a deterioration of the Company's business. The Company's backlog includes only those projects for which the Company has obtained a signed contract with the customer.

Approximately 91% of the Company's backlog at December 31, 2013 is expected to be completed and converted into revenue in 2014.

*Dredging*

The 2013 domestic dredging bid market totaled \$1,276.1 million, a 35.8% increase from the 2012 domestic dredging bid market of \$939.3 million. The 2013 bid market saw significantly higher coastal protection contracts let to bid than

in the prior year, specifically 200% over the amount of projects let to bid in all of 2012. Much of this work was funded by a special appropriations bill passed in response to Superstorm Sandy to restore miles of coastline damaged by the storm. The 2013 domestic capital dredging bid market greatly increased from the prior year primarily due to the addition of the first two phases of the PortMiami project. Partially offsetting this increase were decreases in contract values let to bid in the maintenance dredging and rivers & lakes markets in the current year. The Company won 54% of the overall 2013 domestic bid market, significantly above its 37% win rate of the overall 2012 domestic bid market. The Company's prior three-year average win rate is 37%. Variability in contract wins from period to period is not unusual. The Company believes trends in its win rate over the prior three year periods provide a historical background against which current year results can be compared.

---

**Table of Contents**

The Company's December 31, 2013 contracted dredging backlog was \$515.1 million. This represents an increase of \$125.8 million, or 32.3%, over the Company's December 31, 2012 dredging backlog of \$389.3 million. These amounts do not reflect approximately \$136.4 million of domestic low bids pending formal award and additional phases ( options ) pending on projects currently in backlog. At December 31, 2012 the amount of domestic low bids pending award was \$82.1 million. Backlog at December 31, 2013 includes \$151 million related to the first two phases of the PortMiami deepening project that was awarded in the current year. Excluding the backlog for this project, the remaining increase in the Company's annual dredging backlog is attributable to higher value coastal protection and maintenance projects won by the Company in 2013 compared to the prior year.

The Company won 65%, or \$284.3 million, of the domestic capital dredging projects awarded in 2013. Significant new awards during the year included \$174.1 million for the PortMiami deepening project, a New York harbor deepening project and a Louisiana coastal restoration project. Approximately \$176.1 million, or 34%, of the Company's December 31, 2013 contracted dredging backlog consists of domestic capital dredging work, a substantial portion of which is expected to be performed in 2014. Domestic capital dredging backlog at December 31, 2013 was \$132.9 million greater than the prior year. Subsequent to year end, the Company was awarded the remaining option of \$31.6 million on the PortMiami project, bringing the total contract value to \$205.7 million. The government is operating under an approved fiscal year 2014 budget which provided an increase in funding for the Corps. Both the President and Congress continue to put a focus on the importance of our ports to the U.S. economy. Additional funding for work in the Port of Savannah was specifically appropriated in this budget. The Company also anticipates an active bid market related to coastal restoration work in the Gulf over the next twelve months.

Foreign capital dredging backlog decreased to \$98.7 million at December 31, 2013 from \$219.0 million at the end of 2012. The decrease in the Company's foreign backlog is a result of the conclusion of our work on a large land reclamation project in Bahrain which the Company worked on since 2006. Additionally, the Company continued to earn on the Wheatstone LNG project, a project in Brazil and a project in Qatar which decreased backlog in 2013. The Company continues to look for work internationally to fully utilize our fleet of vessels. Growth around developing urban areas has spurred land reclamation and large public projects involving dredging to support expanding populations. Global energy demand necessitates improvements in the infrastructure base around sources of rich resources and countries that import global energy. The Company expects the increase in global population and transportation to provide a source of increased future international revenue.

The Company won 57%, or \$245.2 million, of the coastal protection projects awarded in 2013. A majority of coastal protection projects won during 2013 were for communities in Florida as well as beaches on the New York/New Jersey coast needed as a result of Superstorm Sandy which impacted the East Coast of the U.S. causing damage to a wide area of private and public infrastructure including severe erosion in many beachfront communities. The Company has contracted dredging backlog related to coastal protection of \$143.5 million at December 31, 2013 compared to \$80.2 million at the end of 2012. The Company expects to perform its entire coastal protection backlog throughout 2014. In January 2013, the President signed legislation appropriating \$50.5 billion in emergency funds to assist the needed relief for the region. These monies are helping people rebuild their homes and communities which in many cases abut the coastline and rely upon the beach. The legislation included nearly \$4 billion for long-term Corps projects to clear navigation channels, renourish damaged beaches and mitigate shore erosion from future storms. The Company expects the second wave of projects related to the Sandy funding to be released in the second half of 2014.

The Company won 37%, or \$131.3 million, of the maintenance dredging projects awarded in 2013. The Corps awarded several large maintenance projects in the year including two projects in New York/New Jersey totaling \$45.2 million, a \$10.3 million harbor project in Maryland and six projects in Florida and Georgia. The Company has contracted maintenance dredging backlog at December 31, 2013 of \$70.6 million which is \$48.2 million higher than the backlog of \$22.4 million at December 31, 2012. The Corps' approved fiscal year 2014 budget includes new

funding specifically appropriated for port maintenance dredging. Additionally, the Senate

## **Table of Contents**

and the House passed versions of the *Water Resources Reform and Development Act* in 2013 which includes language that will require over time, more money from the Harbor Maintenance Trust Fund ( HMTF ) to be spent on maintenance dredging. The differences in the bills are currently being resolved and we expect passage by the summer of 2014.

Rivers & lakes won 73%, or \$31.2 million, of the projects in the markets where the group operates. Rivers & lakes has contracted backlog of \$26.2 million at December 31, 2013 which is \$1.6 million more than the backlog at December 31, 2012. Rivers & lakes awards in 2013 included a significant remediation project in the Midwest with Terra and a large dredging project in Kansas. Subsequent to year end, the Company was awarded an \$89 million project on Lake Decatur in Illinois.

### *Environmental & remediation*

Environmental & remediation services backlog was \$28.3 million and \$31.0 million at December 31, 2013 and 2012, respectively, a decrease of \$2.7 million year over year. During 2013, the Company was awarded a large environment remediation project in Michigan. Environmental & remediation earned revenue on this project during the year along with other backlog acquired as part of the Terra acquisition in 2012. The Company continued to work on the brownfield remediation project in New Jersey. The decrease in backlog is the result of the revenue earned during 2013.

### *Liquidity and Capital Resources*

The Company's principal sources of liquidity are net cash flows provided by operating activities, the Company's revolving credit facility and proceeds from previous issuances of long term debt. See Note 7 in the Company's consolidated financial statements. The Company's principal uses of cash are to meet debt service requirements, finance capital expenditures, provide working capital and other general corporate purposes.

The Company's net cash provided by (used in) operating activities for the years ended December 31, 2013, 2012 and 2011 totaled \$74.8 million, \$(1.9) million and \$24.6 million, respectively. Normal increases or decreases in the level of working capital relative to the level of operational activity impact cash flow from operating activities. In 2013, the increase in net cash provided by operating activities was primarily the result of higher adjusted EBITDA from continuing operations and the recovery of investment in working capital on two significant projects as compared to the same period in the prior year. During 2012, the Company invested nearly \$60 million in working capital on these two projects.

The Company's net cash flows used in investing activities for the years ended December 31, 2013, 2012 and 2011 totaled \$46.3 million, \$63.4 million and \$16.7 million, respectively. Investing activities in all periods primarily relate to normal course upgrades and capital maintenance of the Company's dredging fleet. During December 31, 2013, the Company spent \$17.1 million, compared to \$10.4 million in the prior year, on construction in progress for a vessel being built to our specifications. The Company intends to secure financing during construction and upon completion of the vessel. Additionally, the Company sold two vessels during the year which accounted for \$6.7 million in proceeds from dispositions of property and equipment. In the prior year the Company overhauled the engines on the dredge Alaska to provide increased useful life and efficiency which accounted for \$5.5 million of investing capital expenditures in 2012. Additionally, the Company spent \$13.7 million building a semi-permanent pipeline and purchased a storage yard for \$6.4 million during 2012. In 2011, the Company sold the dredges Northerly Island and Victoria Island along with a parcel of land in Channelview, TX adding \$15.6 million in proceeds from dispositions of property and equipment.

The Company's net cash flows provided by (used in) financing activities for the years ended December 31, 2013, 2012 and 2011 totaled \$22.5 million, \$(23.6) million and \$57.4 million, respectively. The increase in cash provided by financing activities was primarily due to net borrowings of \$35 million on the Company's revolving credit facility. Additionally during 2012, the Company paid dividends of \$18.6 million and financing

---

**Table of Contents**

fees of \$2.0 million related to the revolving credit facility. No dividends or financing fees were paid in 2013. Slightly offsetting the increase, the Company paid \$10.5 million on a promissory note related to the Terra acquisition during 2013. The Company issued \$250 million of 7.375% senior notes in 2011, resulting in \$244.2 million of net proceeds. The Company used a portion of these net proceeds to redeem its \$175 million of 7.75% senior subordinated notes in the first three months of 2011 for \$180.0 million, which included a redemption premium and unpaid interest. The Company also paid \$6.0 million in financing fees on the issuance of the senior notes in 2011.

On June 4, 2012, the Company entered into a senior revolving credit agreement (the Credit Agreement ) with certain financial institutions from time to time party thereto as lenders, Wells Fargo Bank, National Association, as Administrative Agent, Swingline Lender and an Issuing Lender, Bank of America, N.A., as Syndication Agent and PNC Bank, National Association, BMO Harris Bank N.A. and Fifth Third Bank, as Co-Documentation Agents. The Credit Agreement, which replaced the Company's former revolving credit agreement, provides for a senior revolving credit facility in an aggregate principal amount of up to \$175 million, subfacilities for the issuance of standby letters of credit up to a \$125 million sublimit, multicurrency borrowings up to a \$50 million sublimit and swingline loans up to a \$10 million sublimit. The Credit Agreement also includes an incremental loans feature that will allow the Company to increase the senior revolving credit facility by an aggregate principal amount of up to \$50 million. This is subject to lenders providing incremental commitments for such increase, provided that no default or event of default exists, the Company being in pro forma compliance with the existing financial covenants after giving effect to the increase and other standard conditions. The prior credit agreement with Bank of America N.A. was terminated.

As of December 31, 2013, the Company had \$35.0 million of borrowings and \$89.0 million of letters of credit outstanding, resulting in \$51.0 million of availability under the Credit Agreement.

Depending on the Company's consolidated leverage ratio (as defined in the Credit Agreement), borrowings under the new revolving credit facility will bear interest at the option of the Company of either a LIBOR rate plus a margin of between 1.50% to 2.50% per annum or a base rate plus a margin of between 0.50% to 1.50% per annum.

The new credit facility contains affirmative, negative and financial covenants customary for financings of this type. The Credit Agreement also contains customary events of default (including non-payment of principal or interest on any material debt and breaches of covenants) as well as events of default relating to certain actions by the Company's surety bonding provider. The Credit Agreement requires the Company to maintain a net leverage ratio less than or equal to 4.50 to 1.00 as of the end of each fiscal quarter and a minimum fixed charge coverage ratio of 1.25 to 1.00. At December 31, 2012, the Company's fixed charge coverage ratio was 1.12x, resulting in an event of default under the Credit Agreement.

On March 15, 2013, the Company executed a Waiver and Amendment No. 2 to the Credit Agreement (the Credit Agreement Waiver and Amendment ) pursuant to which the counterparties thereto agreed, among other things, to waive any default, event of default, or possible event of default, as applicable, related to the Company's failure to meet the above-described financial covenant in the Credit Agreement.

Separately, the Company determined that a perfection trigger event had occurred under the Credit Agreement. As a result, the outstanding obligations under the Credit Agreement, which were previously unsecured, became secured by liens on certain of the Company's vessels and all of its domestic accounts receivable, subject to the liens and interests of certain other parties holding first priority perfected liens. Under the original terms of the Credit Agreement, the obligations thereunder that became secured under these circumstances could again become unsecured provided that (i) no event of default has occurred and is continuing and (ii) the Company has maintained for two consecutive quarters, and is projected to maintain for the next two consecutive quarters, a total leverage ratio less than or equal to 3.75 to 1.0. Pursuant to the Credit Agreement Waiver and Amendment, this provision has been amended to add the

additional condition that no release of the

---

**Table of Contents**

liens securing the obligations under the Credit Agreement can occur until the Company has delivered to the lenders its audited financial statements with respect to its fiscal year ending December 31, 2013.

Performance and bid bonds are customarily required for dredging and marine construction projects, as well as some demolition projects. The Company has a bonding agreement with Zurich American Insurance Company ( Zurich ) under which the Company can obtain performance, bid and payment bonds. The Company also has outstanding bonds with Travelers Casualty and Surety Company of America. Bid bonds are generally obtained for a percentage of bid value and amounts outstanding typically range from \$1 million to \$10 million. At December 31, 2013, the Company had outstanding performance bonds with a notional amount of approximately \$819.6 million of which \$81.8 million relates to projects accounted for in discontinued operations. The revenue value remaining in backlog related to the projects of continuing operations totaled approximately \$405.6 million.

In addition to its credit facility, the Company has a \$24 million International Letter of Credit Facility with Wells Fargo Bank, National Association, as successor by merger to Wells Fargo HSBC Trade Bank. This facility is used for performance and advance payment guarantees on foreign contracts, including our long-term land reclamation project in Bahrain. The Company's obligations under the agreement are collateralized by the Company's foreign accounts receivable. In addition, the Export-Import Bank of the United States ( Ex-Im Bank ) has issued a guarantee under the Ex-Im Bank's Working Capital Guarantee Program, which covers 90% of the obligations owing under the facility. The Company had no letters of credit issued under this facility at December 31, 2013. At December 31, 2012, the Company also failed to meet the International Letter of Credit Facility's requirement of maintaining a minimum fixed charge coverage ratio of 1.25 to 1.0. On March 15, 2013, the Company executed a Waiver to the International Letter of Credit Facility (the LC Waiver ) pursuant to which the counterparties thereto agreed, among other things, to waive any default, event of default, or possible event of default, as applicable, related to the Company's failure to meet the above-described financial covenant in the International Letter of Credit Facility.

In January 2011, the Company issued \$250 million in aggregate principal amount of its 7.375% senior notes due February 1, 2019. Approximately \$180 million of the net proceeds from the issuance of the senior notes was used to prepay all of the Company's 7.75% senior subordinated notes due December 2013, including prepayment premiums and accrued and unpaid interest. The remaining net proceeds from the issuance of the senior notes will be used for general corporate purposes, which may include acquisitions. The indenture governing the senior notes, among other things, limits the ability of the Company and its restricted subsidiaries to (i) pay dividends, or make certain other restricted payments or investments; (ii) incur additional indebtedness and issue disqualified stock; (iii) create liens on its assets; (iv) transfer and sell assets; (v) merge, consolidate or sell all or substantially all of its assets; (vi) enter into certain transactions with affiliates; (vii) create restrictions on dividends or other payments by its restricted subsidiaries and (viii) create guarantees of indebtedness by restricted subsidiaries. These covenants are subject to a number of important limitations and exceptions that are described in the indenture governing the senior notes.

The Company paid dividends of \$3.7 million through the first three quarters of 2012. In the fourth quarter of 2012, the board of directors paid a special dividend of \$14.9 million representing quarterly dividends that likely would have been declared in the fourth quarter 2012 as well as the acceleration of dividends for the four quarters of 2013 plus an additional return of capital. Prior to that, the Company paid dividends of approximately \$1.2 million each quarter, beginning in the second quarter of 2011, and approximately \$1.0 million each quarter prior to that in 2011. The future declaration and payment of dividends will be at the discretion of the Company's board of directors and will depend on many factors, including general economic and business conditions, the Company's strategic plans, its financial results and condition and legal requirements, including restrictions and limitations contained in the Credit Agreement, bonding agreement and the indenture relating to its senior notes. Accordingly, the Company cannot make any assurances as to the size of any such dividend or that it will pay any such dividend in future quarters.

**Table of Contents**

The impact of changes in functional currency exchange rates against the U.S. dollar on non-U.S. dollar cash balances, primarily the Australian Dollar and the Brazilian Real, is reflected in the cumulative translation adjustment net within accumulated other comprehensive income (loss). Cash held in non-U.S. dollar currencies primarily is used for project-related and other operating costs in those currencies reducing the Company's exposure to future realized exchange gains and losses.

The Company believes its cash and cash equivalents, its anticipated cash flows from operations and availability under its revolving credit facility will be sufficient to fund the Company's operations, capital expenditures and the scheduled debt service requirements for the next twelve months. Beyond the next twelve months, the Company's ability to fund its working capital needs, planned capital expenditures, scheduled debt payments and dividends, if any, and to comply with all the financial covenants under the Credit Agreement and bonding agreement, depends on its future operating performance and cash flows, which in turn, are subject to prevailing economic conditions and to financial, business and other factors, some of which are beyond the Company's control.

**Contractual Obligations**

The following table summarizes the Company's contractual cash obligations at December 31, 2013. Additional information related to these obligations can be found in Note 7 and Note 12 to the Company's consolidated financial statements.

	<b>Obligations coming due in year(s) ending:</b>				
	<b>Total (1)</b>	<b>2014</b>	<b>2015- 2017</b>	<b>2018- 2020</b>	<b>2021 and beyond</b>
	<b>(in millions)</b>				
Long term bank debt (2)	\$ 38.0	\$ 0.9	\$ 37.1	\$	\$
Senior notes (3)	343.7	18.4	55.3	270.0	
Unconditional purchase commitments (4)	119.6	53.5	66.1		
Operating lease commitments	83.0	18.6	48.6	12.5	3.3
<b>Total</b>	<b>\$ 584.3</b>	<b>\$ 91.4</b>	<b>\$ 207.1</b>	<b>\$ 282.5</b>	<b>\$ 3.3</b>

- (1) Excluded from the above table are \$0.2 million in liabilities for uncertain tax positions for which the period of settlement is not determinable.
- (2) Represents the credit agreement. At December 31, 2013, total outstanding on this facility was \$35 million. Includes cash interest payments calculated at variable rates between 2.46% and 2.50%.
- (3) Includes cash interest payments calculated at stated fixed rate of 7.375%.
- (4) Includes payments for vessels being built to Company specifications and other contract related commitments.

**Other Off-Balance Sheet and Contingent Obligations**

The Company had outstanding letters of credit relating to foreign contract guarantees and insurance payment liabilities totaling \$76.9 million at December 31, 2013. The Company has granted liens in 2013 subsequent to the end of the prior fiscal year on a substantial portion of its owned operating equipment as security for borrowings under its Credit Agreement. The Company's Credit Agreement, bonding agreement and the indenture relating to its senior notes also contain provisions that require the Company to maintain certain financial ratios and restrict its ability to pay

dividends, incur indebtedness, create liens, and take certain other actions. The Company did not meet one of its financial covenants in the Credit Agreement and the International Letter of Credit Facility at December 31, 2012. Both the Credit Agreement and the International Letter of Credit Facility require the Company to maintain a minimum fixed charge coverage ratio of 1.25 to 1.0. The Company's fixed charge coverage ratio as of December 31, 2012 was 1.12x, resulting in an event of default under the Credit Agreement and the International Letter of Credit Facility. On March 15, 2013, the counterparties thereto agreed,

## **Table of Contents**

among other things, to waive any default, event of default, or possible event of default, as applicable, related to the Company's failure to meet the above-described financial covenant in the Credit Agreement and the International Letter of Credit Facility.

The Company finances certain key vessels, office space, and other equipment used in its operations with off-balance sheet operating lease arrangements with unrelated lessors, requiring annual rentals of \$18.6 million which decline to \$1.5 million over the next nine years subject to future lease arrangements. These off-balance sheet leases contain default provisions, which are triggered by an acceleration of debt maturity under the terms of the Company's Credit Agreement. Additionally, the leases typically contain provisions whereby the Company indemnifies the lessors for the tax treatment attributable to such leases based on the tax rules in place at lease inception. The tax indemnifications do not have a contractual dollar limit. To date, no lessors have asserted any claims against the Company under these tax indemnification provisions.

At December 31, 2013, the Company had outstanding performance bonds with a notional amount of approximately \$819.6 million of which \$81.8 million relates to projects accounted for in discontinued operations. The revenue value remaining in backlog related to the projects of continuing operations totaled approximately \$405.6 million.

Certain foreign projects performed by the Company have warranty periods, typically spanning no more than three to five years beyond project completion, whereby the Company retains responsibility to maintain the project site to certain specifications during the warranty period. Generally, any potential liability of the Company is mitigated by insurance, shared responsibilities with consortium partners, and/or recourse to owner-provided specifications.

The Company considers it unlikely that it would have to perform under any of the aforementioned contingent obligations, other than operating leases.

### **Item 7A. Quantitative and Qualitative Disclosures about Market Risk**

A significant portion of the Company's current dredging operations are conducted outside of the U.S., primarily in the Middle East, Australia and Brazil. It is the Company's policy to hedge foreign currency exchange risk on contracts denominated in currencies other than the U.S. dollar, if available. Currently, the majority of the Company's foreign dredging work is in Bahrain. The currency in Bahrain, the Bahraini Dinar, is linked to the U.S. dollar; therefore, there is no foreign currency exposure on these transactions. Additionally, there are no current contracts in Australia or Brazil that present any foreign currency exposure. At December 31, 2013, the Company had no foreign exchange forward contracts outstanding.

At December 31, 2013, the Company had long-term senior notes outstanding with a recorded book value of \$250.0 million. The fair value of these notes, which bear interest at a fixed rate of 7.375%, was \$261.3 million at December 31, 2013 based on market prices. Assuming a 10% decrease in interest rates from the rates at December 31, 2013 the fair value of this fixed rate debt would have increased to \$269.7 million.

A significant operating cost for the Company is diesel fuel, which represents approximately 13% of the Company's costs of contract revenues. The Company uses fuel commodity forward contracts, typically with durations of less than one year, to reduce the impacts of changing fuel prices on operations. The Company does not purchase fuel hedges for trading purposes. Based on the Company's 2014 projected domestic fuel consumption, a 10% increase in the average price per gallon of fuel would have an immaterial effect on fuel expense, after the effect of fuel commodity contracts in place at December 31, 2013. At December 31, 2013 the Company had outstanding arrangements to hedge the price of a portion of its fuel purchases related to domestic dredging work in backlog, representing approximately 80% of its

anticipated domestic fuel requirements for 2012. As of December 31, 2013, there were 6.5 million gallons remaining on these contracts. Under these agreements, the Company will pay fixed prices ranging from \$2.87 to \$3.14 per gallon. At December 31, 2013, the fair value asset on these contracts was estimated to be \$0.3 million, based on quoted market prices and is

**Table of Contents**

recorded in other current assets. A 10% change in forward fuel prices would result in an immaterial change in the fair value of fuel hedges outstanding at December 31, 2013.

**Item 8. Financial Statements and Supplementary Data**

The consolidated financial statements (including financial statement schedules listed under Item 15 of this Report) of the Company called for by this Item, together with the Report of Independent Registered Public Accounting Firm dated March 11, 2014, are set forth on pages 64 to 103 inclusive, of this Report, and are hereby incorporated by reference into this Item. Financial statement schedules not included in this Report have been omitted because they are not applicable or because the information called for is shown in the consolidated financial statements or notes thereto.

**Quarterly Results of Operations (Unaudited)**

The following tables set forth our unaudited quarterly results of operations for 2013 and 2012. We have prepared this unaudited information on a basis consistent with the audited consolidated financial statements contained in this report and this unaudited information includes all adjustments, consisting only of normal recurring adjustments that we consider necessary for a fair presentation of our results of operations for the quarters presented. You should read this quarterly financial data along with the Condensed Consolidated Financial

**Table of Contents**

Statements and the related notes to those statements included in our Quarterly Reports on Form 10-Q filed with the Commission. The operating results for any quarter are not necessarily indicative of the results for the annual period or any future period.

**Table of Contents**

**Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure**

None.

**Item 9A. Controls and Procedures**  
**Disclosure Controls and Procedures.**

***a) Evaluation of disclosure controls and procedures***

Our management, with the participation of our Chief Executive Officer and Chief Financial Officer, evaluated the effectiveness of the Company's disclosure controls and procedures, as required by Rule 13a-15(b) under the Securities Exchange Act of 1934 (the Exchange Act) as of December 31, 2013. Our disclosure controls and procedures are designed to provide reasonable assurance that information required to be disclosed in the reports that we file or submit under the Exchange Act a) is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding disclosure and b) is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms.

Based on that evaluation, the Chief Executive Officer and the Chief Financial Officer have concluded that the Company's disclosure controls and procedures, as designed and implemented, were effective as of December 31, 2013. Notwithstanding the foregoing, a control system, no matter how well designed, implemented and operated can provide only reasonable, not absolute, assurance that it will detect or uncover failures within the Company to disclose material information otherwise required to be set forth in the Company's periodic reports.

***b) Changes in internal control over financial reporting***

Management had previously identified a material weakness in the Company's internal control over financial reporting as of December 31, 2012 related to processes and controls to timely and consistently capture and analyze contract change orders in our demolition businesses and insufficient monitoring by corporate office personnel. During 2013, the Company implemented a number of changes in its internal control over financial reporting that have remediated the previously identified material weakness. As previously disclosed, the Company has implemented and executed the Company's remediation plans, and as of December 31, 2013, such remediation plan was successfully tested and the material weakness was deemed remediated.

Other than those described above, there were no changes in our internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) during the fiscal quarter ended December 31, 2013 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

***c) Management's annual report on internal control over financial reporting***

The management of Great Lakes Dredge & Dock Corporation, including its Chief Executive Officer and Chief Financial Officer, is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rules 13a-15(f), and 15d-15(f) under the Securities Exchange Act of 1934). Management has used the framework set forth in the report entitled *Internal Control - Integrated Framework* (1992) published by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) to evaluate the effectiveness of the Company's internal control over financial reporting.

The phrase internal control over financial reporting refers to the process designed by, or under the supervision of, our Chief Executive Officer and Chief Financial Officer, and overseen by our Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting

**Table of Contents**

and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles, and includes those policies and procedures that:

Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company;

Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with general accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and

Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Neither internal control over financial reporting nor disclosure controls and procedures can provide absolute assurance of achieving financial reporting objectives because of their inherent limitations. Internal control over financial reporting and disclosure controls are processes that involve human diligence and compliance, and are subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting and disclosure controls also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements may not be prevented, detected or reported on a timely basis by internal control over financial reporting or disclosure controls. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design safeguards for these processes that will reduce, although may not eliminate, these risks.

Our independent registered public accounting firm, Deloitte & Touche LLP, who audited Great Lakes' consolidated financial statements included in this Form 10-K, has issued a report on Great Lakes' internal control over financial reporting, which is included herein.

Management has concluded that our internal control over financial reporting was effective as of December 31, 2013.

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Stockholders of

Great Lakes Dredge & Dock Corporation

Oak Brook, Illinois

We have audited the internal control over financial reporting of Great Lakes Dredge & Dock Corporation and subsidiaries (the Company) as of December 31, 2013, based on criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 31, 2013, of the Company and our report dated March 11, 2014 expressed an unqualified opinion on those financial statements and financial statement schedule.

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Stockholders of

Great Lakes Dredge & Dock Corporation

Oak Brook, Illinois

We have audited the accompanying consolidated balance sheets of Great Lakes Dredge & Dock Corporation and subsidiaries (the Company) as of December 31, 2013 and 2012, and the related consolidated statements of operations, comprehensive income (loss), equity, and cash flows for each of the three years in the period ended December 31, 2013. Our audits also included the financial statement schedule listed in the Index at Item 15. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Great Lakes Dredge & Dock Corporation and subsidiaries as of December 31, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control - Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 11, 2014 expressed an unqualified opinion on the Company's internal control over financial reporting.
