During 3Q08, 10 737-300s and 8 767s were removed from the fleet, causing an increase in maintenance expenses and a decrease in ASK production, thus increasing the Company's consolidated CASK.

GOL's average stage length is projected to be approximately 905 kilometers in 3Q08 versus 974 kilometers in the 3Q07.

Aircraft Delivery Schedule

As of June 30, 2008, GOL's fleet was comprised of 102 Boeing 737 aircraft and 10 Boeing 767s and had 97 aircraft on order with options to acquire an additional 40 aircraft. The 2008 delivery schedule and related financings are:

Fuel Hedges

The Company continues to employ advanced fuel derivative agreements to reduce its exposure to fluctuations in fuel price. Current agreements covering 2008 are:

	3Q08
Estimated Fuel Liters Consumed (mm)	330
Estimated Fuel Price per Liter (R\$)	2.29
Liters (% of estimated consumption)	201 million (61%) HO and WTI with average price of US\$133/bbl

Financial Results and Exchange Variation

On June 30, 2008, the Company had hedges for approximately 55% and 19% of its jet fuel requirements at average crude equivalent prices of approximately US\$132 and US\$133 per barrel for the third and fourth quarters of 2008, respectively. During 3Q08, the Company sold those positions.

The Company also utilizes financial derivative instruments such as hedges to offset its exposure to increases in the US\$ exchange rate. On September 30, 2008, the Company had approximately 46%, 25% and 12% of its short and medium term obligations in foreign currency hedged for 4Q08, 1Q09 and 2Q09, respectively.

The impact of gains in currency hedges and losses in fuel hedges in the quarter results in an approximate net loss of R\$48mm.

During 3Q08, the U.S. Dollar appreciated 20% versus the Brazilian Real, equivalent to R\$0.32. The exchange variation on GOL's net foreign currency liabilities, mainly related to long-term debt, with average term of 7.3 years, will have a negative non-cash impact of approximately R\$225mm in the quarter.
