STERLING BANCORP Form 10-Q November 08, 2012

UNITED STATES SECURITIES AND EXCHANGE COMMISSION Washington, D.C. 20549

FORM 10-Q

(Mark One)

[X] QUARTERLY REPORT PURSUANT TO SECTION 13 or 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended

September 30, 2012

or

[] TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from

to

Commission File Number: 1-5273-1

Sterling Bancorp

(Exact name of registrant as specified in its charter)

New York 13-2565216

(State or other jurisdiction of incorporation or

organization)

(I.R.S. Employer Identification)

650 Fifth Avenue, New York, N.Y. 10019-6108 (Address of principal executive offices) (Zip Code)

212-757-3300

(Registrant's telephone number, including area code)

N/A

(Former name, former address and former fiscal year, if changed since last report)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. x Yes o No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (17 CFR § 232.405) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

x Yes o No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer or a smaller reporting company as defined in Rule 12b-2 of the Exchange Act. (Check one):

Large Accelerated Filer o Accelerated Filer x

Non-Accelerated Filer o Smaller Reporting Company o

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

o Yes x No

As of October 31, 2012 there were 30,955,796 shares of common stock, \$1.00 par value, outstanding.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

Note 1. Significant Accounting Policies

Nature of Operations. Sterling Bancorp (the "parent company") is a financial holding company, pursuant to an election made under the Gramm-Leach-Bliley Act of 1999. Throughout the notes, the term the "Company" refers to Sterling Bancorp and its subsidiaries and the term the "bank" refers to Sterling National Bank and its subsidiaries. The Company provides a full range of financial products and services, including business and consumer loans, commercial and residential mortgage lending and brokerage, mortgage warehouse lending, asset-based financing, factoring/accounts receivable management services, trade financing, equipment financing and deposit services. The Company has operations principally in New York and conducts business throughout the United States.

The Company's financial statements are prepared in accordance with U.S. generally accepted accounting principles ("U.S. GAAP") which principally consist of the Financial Accounting Standards Board Accounting Standards Codification ("FASB Codification"). FASB Codification Topic 105: Generally Accepted Accounting Principles establishes the FASB codification as the source of authoritative accounting principles recognized by the FASB to be applied by nongovernmental entities in the preparation of financial statements in conformity with generally accepted accounting principles. Rules and interpretive releases of the Securities and Exchange Commission ("SEC") under authority of federal securities laws are also sources of authoritative guidance for SEC registrants. All guidance contained in the FASB Codification carries an equal level of authority. All non-grandfathered, non-SEC accounting literature not included in the FASB Codification is superseded and deemed non-authoritative.

Basis of Presentation. The consolidated financial statements include the accounts of Sterling Bancorp and its subsidiaries, principally the bank, after elimination of intercompany transactions. The consolidated financial statements as of and for the interim periods ended September 30, 2012 and 2011 are unaudited; however, in the opinion of management, all adjustments, consisting of normal recurring accruals, necessary for a fair presentation of such periods have been made. Certain reclassifications have been made to the prior year's consolidated financial statements to conform to the current presentation. Throughout the notes, dollar amounts presented in tables are in thousands, except per share data. The interim consolidated financial statements should be read in conjunction with the Company's annual report on Form 10-K for the year ended December 31, 2011 (the "2011 Form 10-K").

Use of Estimates. The preparation of financial statements in accordance with U.S. GAAP requires management to make assumptions and estimates which impact the amounts reported in those statements and are, by their nature, subject to change in the future as additional information becomes available or as circumstances vary. Actual results could differ from management's current estimates as a result of changing conditions and future events. The current economic environment has increased the degree of uncertainty inherent in these significant estimates. Several accounting estimates are particularly critical and are susceptible to significant near-term change, including the allowance for loan losses and asset impairment judgments, such as other-than-temporary declines in the value of securities and the accounting for income taxes. The judgments used by management in applying these critical accounting policies may be affected by a further and prolonged deterioration in the economic environment, which may result in changes to future financial results. For example, subsequent evaluations of the loan portfolio, in light of the factors then prevailing, may result in significant changes in the allowance for loan losses in future periods, and the inability to collect outstanding principal may result in increased loan losses. The Company evaluates subsequent events through the date that the financial statements are issued.

STERLING BANCORP AND SUBSIDIARIES Notes to Consolidated Financial Statements (Unaudited)

The Company invests principally in obligations of U.S. government corporations and government sponsored enterprises, New York bank qualified obligations of state and political institutions, and corporate debt and equity securities. The fair value of these investments fluctuates based on several factors, including credit quality and general interest rate changes. The Company determined that it is not more likely than not that the Company would be required to sell before anticipated recovery of the securities' cost basis.

At September 30, 2012, approximately \$124.7 million, representing approximately 17.8% of the Company's held to maturity and available for sale securities are comprised of securities issued by financial service companies/banks including single-issuer trust preferred securities (24 issuers), corporate debt (41 issuers), other preferred securities (3 issuers), and equity securities (13 issuers). These investments may pose a higher risk of future impairment charges as a result of possible further deterioration of the U.S. economy. The Company would be required to recognize impairment charges on these securities if they suffer a decline in value that is considered other-than-temporary. Numerous factors, including lack of liquidity for re-sales of certain investment securities, absence of reliable pricing information for investment securities, adverse changes in business climate, adverse actions by regulators or unanticipated changes in the competitive environment could have a negative effect on the Company's investment portfolio and may result in other-than-temporary impairment on certain investment securities in future periods.

At September 30, 2012, the Company held 4 security positions of single-issuer, trust preferred securities issued by financial institutions, in the available for sale portfolio, that were in an unrealized loss position for more than 12 months and are paying in accordance with their terms and have no deferrals of interest or other deferrals. In addition, management analyzes the performance of the issuers on a periodic basis, including a review of the issuers' most recent bank regulatory reports and other public regulatory disclosures, to assess credit risk and the probability of impairment of the contractual cash flows of the applicable securities. Based upon management's third quarter review, the issuers have maintained performance levels adequate to support the contractual cash flows of the securities.

At September 30, 2012, the Company held 13 security positions of corporate debt securities issued by financial institutions and other corporate issuers, in the available for sale portfolio, that were in an unrealized loss position for more than 12 months. Each of these positions are paying in accordance with their terms and have no deferrals of interest or other deferrals. In addition, management analyzes the performance of each issuer on a periodic basis, including a review of the issuer's most recent public regulatory disclosures, to assess credit risk and the probability of impairment of the applicable securities. Based upon management's third quarter review, management has concluded that the unrealized losses are deemed to be temporary.

At September 30, 2012, the Company held 6 issues of equity securities, in the available for sale portfolio, that were in an unrealized loss position for more than 12 months. Management analyzes the performance of each issuer on a periodic basis, including a review of the issuer's most recent public regulatory disclosures, to assess credit risk and the probability of impairment of the applicable securities. Based upon management's third quarter review, management has concluded that the unrealized losses are deemed to be temporary.

At September 30, 2012, the Company held one position in residential mortgage-backed securities issued by the Federal Home Loan Mortgage Corporation in the available for sale portfolio that was in an unrealized loss position for more than 12 months. The amount of the unrealized loss (\$1 thousand) was insignificant to the Company's result of operations for the nine months ended September 30, 2012.

Total commercial lending	1,465,306	1,310,868
Real estate—residential mortgage	165,945	170,153
Loans to depository institutions	-	10
Loans to individuals	11,767	10,376
Loans held in portfolio, gross	1,643,018	1,491,407
Less unearned discounts	17,603	18,098
Loans held in portfolio, net of unearned discounts	1,625,415	1,473,309
Total loans, net of unearned discounts	\$1,676,966	\$1,516,681

At September 30, 2012, the bank had qualified loans, with a carrying value of approximately \$370.5 million, available to secure borrowings from the FHLB and the FRB, of which approximately \$2.3 million were pledged to the FHLB. There were no loans pledged at December 31, 2011.

Loan Origination/Risk Management

The Company has lending policies and procedures in place that are designed to maximize loan income within an acceptable level of risk. Management reviews and approves these policies and procedures on a regular basis. A reporting system supplements the review process by providing management with frequent reports related to loan production, loan quality, concentrations of credit, loan delinquencies and non-performing and potential problem loans. Diversification in the loan portfolio is a means of managing risk associated with fluctuations in economic conditions.

The Company maintains an independent loan review process that reviews and validates the credit risk program on a periodic basis. Results of these reviews are presented to management. The loan review process complements and reinforces the risk identification and assessment decisions made by lenders.

Commercial and Industrial and Loans to Nondepository Financial Institutions

Sterling provides a full range of loans to small and medium-sized businesses with the objective of establishing longer-term relationships. Loans generally range in size up to \$20 million, tailored to meet customers' long- and short-term needs, and include secured and unsecured lines of credit and business installment loans.

Loans generally are collateralized by accounts receivable, inventory and other assets. Sterling also provides back-office services, i.e., processing payroll, generating customer invoices, credit collection assistance and related payroll services. The repayment of commercial loans is generally dependent on the creditworthiness and cash flow of borrowers and guarantors, which may be negatively impacted by adverse economic conditions. While these loans are secured, collateral type, marketability, coverage, valuation and monitoring is not as uniform as in other portfolio classes and recovery from liquidation of such collateral may be subject to greater variability.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

Factoring

Factoring provides a financing service that combines working capital financing, credit risk protection, and accounts receivable management for companies in a variety of industries. This business may be conducted on a recourse or non-recourse basis, depending upon the needs of the client.

In general, Sterling records a receivable for the amount of accounts receivables due from customers of its clients and records a liability for the funds due to the client. Under advance factoring arrangements, clients can draw an advance as accounts receivables are sold/assigned to Sterling. With advance factoring, Sterling normally has recourse against the client if the customer fails to pay. Under collection factoring arrangements, clients sell Sterling their accounts receivables and Sterling provides credit protection to the client guaranteeing the collection of the amount due and back office support. Collection factoring is generally under a nonrecourse basis where the principal source of payment for Sterling is through the collection of the receivable from our client's customer whose credit has been approved by Sterling following a rigorous review process. Also, with collection factoring, Sterling has credit default insurance with a nationally recognized insurance company to provide it with protection against customer default.

Commercial Real Estate

Sterling offers a range of commercial real estate lending including financing on commercial buildings, retail properties and mixed use properties. Loans are predicated on the cash flow of the property, the value of the property determined by an independent appraisal and the strength of personal guarantees, if any. Loans are made at fixed or floating rates. Floating rate loans are based on the prime rate. Fixed rate loans are tied to Treasury or FHLB benchmarks and other indices.

Commercial real estate loans are subject to underwriting standards and processes similar to commercial and industrial loans, in addition to those of real estate loans. These loans are viewed primarily as cash flow loans and secondarily as loans secured by real estate. Commercial real estate lending typically involves higher loan principal amounts and the repayment of these loans is generally dependent on the successful operation of the property securing the loan or the business conducted on the property securing the loan. Commercial real estate loans may be more adversely affected by conditions in the real estate markets or in the general economy. The properties securing the Company's commercial real estate portfolio are diverse in terms of type and geographic location. This diversity helps reduce the Company's exposure to adverse economic events that affect any single market or industry. Management monitors and evaluates commercial real estate loans based on collateral, geographic and risk grade criteria.

With respect to loans to developers and builders that are secured by non-owner occupied properties that the Company may originate from time to time, the Company generally requires the borrower to have had an existing relationship with the Company and have a record of success. Construction loans are underwritten utilizing feasibility studies, independent appraisal reviews, sensitivity analysis of absorption and lease rates and financial analysis of the developers and property owners. Construction loans are generally based upon estimates of costs and value associated with funds, with repayment substantially dependent on the success of the ultimate project. Sources of repayment for these types of loans may be pre-committed permanent loans from approved long-term lenders, sales of developed property or an interim loan commitment from the Company until permanent financing is obtained. These loans are closely monitored by on-site inspections and are considered to have higher risks than other real estate loans due to their ultimate repayment being sensitive to timely completion of the project, interest rate changes, government regulation of real property, general economic conditions and the availability of long-term financing.

Loans are made at fixed or floating rates. Fixed rate loans are tied to U.S. Treasury or FHLB benchmarks or other indices. Floating rate loans are based on the prime rate or other indices.

Equipment Financing

Sterling engages in direct and indirect lease financing. Direct lease financing is when requests for financing originate with an end user seeking to finance equipment for up to 60 months. Indirect lease finance arises through relationships with equipment financing brokers.

In both cases, credit approval is based upon on a full underwriting process that involves the submission of financial and other information, including the applicant's historical performance, cash flow projections and value of equipment, and for customers who are not public entities, Sterling generally obtains the personal guarantees of the principals of the entities.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

Residential Mortgage

Residential mortgage loans, principally on single-family residences, are made primarily for re-sale into the secondary market. Offering both fixed and adjustable rate residential mortgage loan products, Sterling focuses on conforming credit, government insured FHA and other high-quality loan products. Jumbo loans are also originated for sale into the secondary market, or brokered to third-party providers.

The ability of borrowers to service debt in the residential mortgage loan portfolios is generally subject to personal income which may be impacted by general economic conditions, such as increased unemployment levels. These loans are predominantly collateralized by first and second liens on single family properties. If a borrower cannot maintain the loan, the Company's ability to recover against the collateral in sufficient amount and in a timely manner may be significantly influenced by market, legal and regulatory conditions.

Concentrations of Credit

There are no industry concentrations (exceeding 10% of loans, gross), other than loans to nondepository financial institutions, of loans held in portfolio. Loans to nondepository financial institutions, which include the Company's residential mortgage warehouse funding product and loans to finance companies, represent approximately 19.8% of all loans. Approximately 69.9% of loans are to borrowers located in the New York metropolitan area. A further deterioration in economic conditions within the region, including a decline in real estate values, higher unemployment and other factors which could adversely impact small and mid-sized businesses, could have a significant adverse impact on the quality of the Company's loan portfolio. In addition, a decline in real estate values and higher unemployment within the mid-Atlantic region and North Carolina could adversely impact the Company's residential real estate loan portfolio.

Approximately 29.4% or \$10.1 million and 20.7% or \$6.9 million of the Company's net interest income and noninterest income are related to real estate lending for the three months ended September 30, 2012 and 2011, respectively. Approximately 27.1% or \$27.3 million and 20.9% or \$20.1 million of the Company's net interest income and noninterest income are related to real estate lending for the nine months ended September 30, 2012 and 2011, respectively. Real estate prices in the U.S. market decreased during 2011 and have been relatively stable in 2012. These continuing trends in real estate values could necessitate charge-offs in our mortgage loan portfolio that may impact our operating results. In addition, a sustained period of stable to declining real estate values combined with the continued turbulence in the financial and credit markets would continue to limit our mortgage-related revenues.

As of September 30, 2012 approximately 57.4% of the Company's loans consisted of commercial and industrial, factored receivables, construction and commercial real estate mortgage loans. Because the Company's loan portfolio contains a number of commercial and industrial, construction and commercial real estate loans with relatively large balances, the deterioration of one or a few of these loans could cause a significant increase in non-performing loans.

Related Party Loans

Loans are made to officers or directors (including their immediate families) of the Company or for the benefit of corporations in which they have a beneficial interest subject to applicable regulations. There were no outstanding balances on such loans in excess of \$60 thousand to any individual or entity at September 30, 2012 or 2011.

Nonperforming Loans

Nonaccrual loans are those on which the accrual of interest has ceased. Loans, including loans that are individually identified as being impaired under FASB Codification Topic 310: Receivables, are generally placed on nonaccrual

status immediately if, in the opinion of management, principal or interest is not likely to be paid in accordance with the terms of the loan agreement, or when principal or interest is past due 90 days or more and collateral, if any, is insufficient to cover principal and interest. Interest accrued but not collected at the date a loan is placed on nonaccrual status is reversed against interest income. Interest income is recognized on nonaccrual loans only to the extent received in cash. Where there is doubt regarding the ultimate collectibility of the loan principal, cash receipts, whether designated as principal or interest, are thereafter applied to reduce the carrying value of the loan. Loans are restored to accrual status when interest and principal payments are brought current and future payments are reasonably assured.

Notes to Consolidated Financial Statements (Unaudited)

Nonaccrual loans at September 30, 2012 and December 31, 2011 totaled \$5.4 million and \$6.4 million, respectively. The interest income that would have been earned on nonaccrual loans outstanding at September 30, 2012, in accordance with their original terms, is estimated to be \$156 thousand and \$489 thousand, respectively, for the three and nine months then ended. Applicable interest income actually realized was \$19 thousand and \$68 thousand, respectively, for the aforementioned periods. The interest income that would have been earned on nonaccrual loans outstanding at December 31, 2011, in accordance with their original terms is estimated to be \$780 thousand, for the year then ended; the applicable interest income actually realized was \$200 thousand. There were no commitments to lend additional funds on nonaccrual loans.

The following table sets forth the amount of nonaccrual loans of the Company as of the dates indicated:

	;	September 30,	Ι	December 31,
		2012		2011
Commercial and industrial	\$	1,794	\$	834

Impaired Loans

Management considers a loan to be impaired when, based on current information and events, it is determined that the Company will not be able to collect all amounts due according to the loan contract, including scheduled interest payments. Determination of impairment is treated the same across all classes of loans on a loan-by-loan basis. When management identifies a loan as impaired, the impairment is measured based on the present value of expected future cash flows, discounted at the loan's effective interest rate, except when the sole remaining source of repayment of the loan is the operation or liquidation of the collateral. In these cases management uses the current fair value of the collateral, less selling costs when foreclosure is probable, instead of discounted cash flows.

If management determines that the value of the impaired loan is less than the recorded investment in the loan (net of previous charge-offs, deferred loan fees or costs and unamortized premium or discount), impairment is recognized through an allowance estimate or a charge-off to the allowance.

When the ultimate collectibility of the total principal of an impaired loan is in doubt and the loan is on nonaccrual status, all payments are applied to principal, under the cost recovery method. When the ultimate collectibility of the total principal of an impaired loan is not in doubt and the loan is on nonaccrual status, contractual interest is credited to interest income when received, under the cash basis method. Impaired loans, or portions thereof, are charged off when deemed uncollectible.

The following tables include the recorded investment and unpaid principal balances for impaired financing receivables with the associated allowance amount, if applicable. Management determined the specific allowance based on the present value of the expected future cash flows, discounted at the loan's effective interest rate, except when the remaining source of repayment for the loan is the operation or liquidation of the collateral. In those cases, the current fair value of the collateral, less selling costs was used to determine the specific allowance recorded.

[1] Year-to-date

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

The average recorded investment and interest income recognized in accruing impaired loans for the three months ended September 30, 2012 amounted to \$5.1 million (equipment financing receivables \$0.1 million and real estate-residential mortgage \$5.0 million) and \$95 thousand (equipment financing receivables \$1 thousand and real estate-residential mortgage \$94 thousand), respectively. The average recorded investment and interest income recognized in accruing impaired loans for the nine months ended September 30, 2012 amounted to \$5.7 million (commercial and industrial \$0.6 million, equipment financing receivables \$0.1 million and real estate-residential mortgage \$5.0 million) and \$260 thousand (commercial and industrial \$7 thousand, equipment financing receivables \$3 thousand and real estate-residential mortgage \$250 thousand), respectively.

The average recorded investment and interest income recognized in accruing impaired loans for the year ended December 31, 2011 amounted to \$6.7 million (commercial and industrial \$1.8 million, equipment financing receivables \$0.2 million and real estate – residential mortgage \$4.7 million) and \$430 thousand (commercial and industrial \$95 thousand, equipment financing receivables \$8 thousand and real estate – residential mortgage \$327 thousand), respectively.

The Company had troubled debt restructured loans ("TDR") totaling \$7.3 million as of September 30, 2012 and \$6.4 million as of December 31, 2011. The Company has allocated \$1.5 million and \$1.3 million of specific reserves to customers with equipment financing receivables and residential real estate loans whose loan terms have been modified in troubled debt restructurings as of September 30, 2012 and December 31, 2011. The Company has no commitments to lend additional amounts to customers with outstanding loans that are classified as troubled debt restructurings.

During the three and nine months ended September 30, 2012, the terms of \$471 thousand and \$1.6 million of residential real estate loans were modified as troubled debt restructurings. The modification of terms of such loans included one or a combination of the following: a reduction of the stated interest rate of the loan; an extension of the maturity date at a stated rate of interest lower than the current market rate for new debt with similar risk; or a permanent reduction of the recorded investment in the loan. No lease financing receivables were modified during the three months or nine months ended September 30, 2012.

Modifications of residential real estate loans involving a reduction of the stated interest rate or an extension of the maturity date were for periods ranging up to 40 years.

The troubled debt restructurings described above increased the allowance for loan losses by \$197 thousand for the three months ended September 30, 2012 and resulted in charge-offs of \$1 thousand during the three months ended September 30, 2012. The troubled debt restructurings described above increased the allowance for loan losses by \$511 thousand for the nine months ended September 30, 2012 and resulted in charge-offs of \$182 thousand during the nine months ended September 30, 2012.

During the three and nine months ended September 30, 2012, defaults on residential mortgage loans held in portfolio that were modified during 2011 and had a payment default within twelve months of their modification date had a loan balance of \$76 thousand and \$419 thousand, respectively, and had a specific allocation of the allowance for loan losses of \$115 thousand at September 30, 2012.

Credit Quality Indicators

As part of the ongoing monitoring of the credit quality of the Company's loan portfolio, management tracks certain credit quality indicators including trends related to (i) the risk grade of loans, (ii) the level of classified loans, (iii)

charge-offs, (iv) nonperforming loans and (v) the general economic conditions in the New York metropolitan area.

The Company categorizes loans into risk categories based on relevant information about the ability of borrowers to service their debt, such as: current financial information, historical payment experience, credit documentation, public information, and current economic trends, among other factors. The Company has a process for analyzing non-homogeneous loans, such as commercial and industrial and commercial real estate loans, individually by grading the loans based on credit risk. This analysis occurs at varying times based on the type of loan as well as the loan balance and occurs at least once every 18 months for those loans greater than \$500,000.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements

(Unaudited)

For homogeneous loan pools, such as residential mortgages, leases and consumer loans, the Company uses payment status to identify the credit risk in these loan portfolios. Payment status is reviewed on a daily basis by the Company's personnel and on a monthly basis with respect to determining the adequacy of the allowance for loan losses. The payment status of these homogeneous pools at September 30, 2012 is included in the aging of the recorded investment of past due loans table above. In addition, the total nonperforming portion of these homogeneous loan pools at September 30, 2012 is presented in the recorded investment in the nonaccrual loans table above.

The Company utilizes a risk grading matrix to assign a risk grade to each of its commercial loans. Loans under \$100,000 are not risk rated. Loans are graded on a scale of 1 to 9. A description of the general characteristics of the 9 risk grades is as follows:

Risk Rating 1 & 2/High Quality/Minimal Risk—These loans are well secured by liquid or high quality, diversified, and readily marketable securities within the bank's defined margin requirements including cash surrender value of life insurance, or loans to strong privately held obligors secured by real estate with satisfactory loan to value, and support guarantors. They could include loans to publicly traded entities with strong credit ratings (A-1 or better) with Moody's or Standard & Poor's.

Risk Rating 3 & 4/Very Good/Good Quality—These loans can be either unsecured or secured (with monthly monitoring of Accounts Receivable and/or Inventory) to adequately or moderately capitalized privately held obligors with satisfactory sales, revenue, earnings trends, cash flow, and leverage. These secured loans may be monitored in the Asset Based Lending or the Factoring Department to include control of cash receipts and defined formula advances. These categories could include loans to publicly traded entities with credit ratings of A-3 or lower by Moody's or Standard & Poor's.

Risk Rating 5/Watch List—These loans are to companies with uneven financial performance containing exceptions to loan policy without mitigating factors. These loans may exist when the obligors experience temporary credit and/or structural deficiencies. Such credits have not been criticized by Loan Review. Close supervision is warranted to avoid further deterioration.

Risk Rating 6/Special Mention (OCC Definition)—Other Assets Especially Mentioned (OAEM) are loans that are currently protected but are potentially weak. Special Mention ratings have potential weaknesses which may, if not checked or corrected, weaken the asset or inadequately protect the bank's credit position at some future date. Such assets constitute an undue and unwarranted credit risk but not to the point of justifying a classification of substandard. The credit risk may be relatively minor yet constitute an unwarranted risk in light of the circumstances surrounding a specific asset.

Risk Rating 7/Substandard (OCC Definition)—These loans are inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Assets so classified must have a well-defined weakness that jeopardizes the liquidation of the debt. They are characterized by the distinct possibility that the Bank will sustain some loss if the deficiencies are not corrected. Loss potential, while existing in the aggregate amount of substandard assets, does not have to exist in individual assets classified as substandard.

Risk Rating 8/Doubtful (OCC Definition)—These loans have all the weakness inherent in loans classified as substandard with the added characteristic that the weakness makes collection or liquidation in full, on the basis of currently existing facts, conditions, and values, highly questionable and improbable. The possibility of loss is

extremely high, but because of certain important and reasonably specific pending factors which may work to the advantage and strengthening of the asset, its classification as an estimated loss is deferred until its more exact status may be determined. Pending factors include proposed merger, acquisition, or liquidating procedures, capital injection, perfecting liens or additional collateral and refinancing plans.

Risk Rating 9/Loss (OCC Definition)—These loans are classified as loss and charged-off because they are determined to be uncollectible and unbankable assets. This classification does not mean that the asset has absolutely no recovery or salvage value, but rather it is not practical or desirable to defer writing off this basically worthless asset even though partial recovery may be effected in the future. The bank should not be allowed to attempt long-term recoveries while the asset remains booked. Losses should be taken in the period in which they are determined to be uncollectible.

STERLING BANCORP AND SUBSIDIARIES

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

Allowance for Loan Losses

The allowance reflects management's best estimate of probable losses within the existing loan portfolio and of the risk inherent in various components of the loan portfolio. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risk inherent in the loan portfolio. Additions to the allowance for loan losses are made by charges to the provision for loan losses. Credit exposures deemed to be uncollectible are charged against the allowance for loan losses. Recoveries of previously charged-off amounts are credited to the allowance for loan losses.

The Company's allowance for loan loss methodology is based on guidance provided by the "Interagency Policy Statement on the Allowance for Loan and Lease Losses" issued by the Office of the Comptroller of the Currency, the Board of Governors of the Federal Reserve System (the "Federal Reserve Board"), the Federal Deposit Insurance Corporation, the National Credit Union Administration and the Office of Thrift Supervision in December 2006 and includes an allowance allocation calculated in accordance with U.S. GAAP guidance in FASB Codification Topic 310: Receivables and allowance allocations calculated in accordance with FASB Codification Topic 450: Contingencies. Accordingly, the methodology is based on historical loss experience by type of credit and internal risk grade, specific homogeneous risk pools and specific loss allocations, with adjustments for current events and conditions.

The level of the allowance for loan losses relies on a consistent process that requires multiple layers of management review and judgment and of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality, present economic, political and regulatory conditions and unidentified losses inherent in the current loan portfolio. Portions of the allowance may be allocated to specific credits; however, the entire allowance is available for any credit that, in management's judgment, should be charged-off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company's control, including, among other things, the performance of the Company's loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

The Company's allowance for loan losses includes (1) specific valuation allowances for impaired loans evaluated in accordance with FASB Codification Topic 310: Receivables; (2) formulaic allowances based on historical loss experience by loan category, adjusted, as necessary, to reflect the impact of current conditions; and (3) unallocated general valuation allowances determined in accordance with FASB Codification Topic 450: Contingencies based on general economic conditions and other qualitative risk factors both internal and external to the Company.

The allowance established for losses on specific loans is based on a regular analysis and evaluation of problem loans. Loans are classified based on an internal credit risk grading process that evaluates, among other things: (i) the obligor's ability to repay; (ii) the underlying collateral, if any; and (iii) the economic environment and industry in which the borrower operates. This analysis is performed at the relationship manager level for all loans. When a loan has a calculated grade of 6 or higher, an analysis is performed to determine whether the loan is impaired and, if impaired, the need to specifically allocate a portion of the allowance for loan losses to the loan. Specific valuation allowances are determined by analyzing the borrower's ability to repay amounts owed, collateral deficiencies, the relative risk grade of the loan and economic conditions affecting the borrower's industry, among other things.

Historical valuation allowances are calculated based on the historical loss experience of specific types of loans and the internal risk grade of such loans at the time they were charged-off. The Company calculates historical loss ratios for pools of similar loans with similar characteristics based on the proportion of actual charge-offs experienced to the total population of loans in the pool. The historical loss ratios are periodically updated based on actual charge-off

experience. A historical valuation allowance is established for each pool of similar loans based upon the product of the historical loss ratio and the total dollar amount of the loans in the pool.

The Company's pool of similar loans includes similarly risk-graded groups of commercial and industrial loans, commercial real estate loans, residential real estate loans and consumer and other loans.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

General valuation allowances are based on general economic conditions and other qualitative risk factors both internal and external to the Company. In general, such valuation allowances are determined by evaluating, among other things:

- Estimated losses in all significant loans
- Existence and effect of any concentrations of credit
- Existence and effect of any geographic concentration
- Other external factors such as competition, legal matters or regulation that may affect risk
- Effect of criticized and classified loans
- Effects from risk arising with international lending
- Effectiveness of internal problem loan identification and risk ratings
- Trends in portfolio volume, maturity and compositions of loans within segments
- Volumes and trends in delinquencies and nonaccrual loans
- Changes in the quality of lending policies and procedures
- Changes in local and national economic conditions
- Experience, ability and depth of lending staff
- Changes in value of underlying collateral

Management evaluates the degree of risk that each one of these components has on the quality of the loan portfolio on a quarterly basis. Each component is determined based on degree of risk. The results are then input into a "general allocation matrix" to determine an appropriate general valuation allowance.

Included in the general valuation allowances are allocations for groups of similar loans with risk characteristics that exceed certain concentration limits established by management. Concentration risk limits have been established, among other things, for certain industry concentrations, large and highly leveraged credit relationships that exceed specified risk grades, and loans originated with policy exceptions that exceed specified risk grades.

Loans are generally charged-off at the earlier of when it is determined that collection efforts are no longer productive or when they have been identified as losses by management, internal loan review and/or bank examiners. Furthermore, equipment financing receivables and revolving credit lines to small businesses are charged-off at the earlier of when payments are 120 days past due or when it is determined that collection efforts are no longer productive.

Factors considered in determining whether collection efforts are no longer productive include any amounts currently being collected, the status of discussions or negotiations with the lessee/borrower, the principal and/or guarantors, the cost of continuing efforts to collect, the status of any foreclosure or other legal actions, the value of the collateral, and any other pertinent factors.

STERLING BANCORP AND SUBSIDIARIES Notes to Consolidated Financial Statements (Unaudited)

Note 4. Federal Home Loan Bank Advances

During the 2011 first quarter, the bank restructured a portion of its Federal Home Loan Bank fixed rate advances by repaying \$100 million of existing borrowings and replacing them with \$100 million of lower cost, floating rate advances. This transaction resulted in \$4.2 million in prepayment penalties that were deferred and will be recognized in interest expense as an adjustment to the cost of these borrowings in future periods. The existing borrowings were a combination of fixed rate and amortizing advances with an average cost of 2.58% and an average duration of 3.2 years. The new borrowings were all floating-rate advances with a current average cost of 1.71%, including the deferred adjustment, with an average duration of three months. The relevant accounting treatment for this transaction was provided in ASC 470-50. This transaction was executed as an earnings and interest rate risk strategy, resulting in lower FHLB advance costs and a reduction of average duration.

Note 5. Preferred Stock

On April 27, 2011, the parent company paid \$42.4 million to the U.S. Treasury for the repurchase in full of the Treasury's investment in 42,000 shares of the parent company's Fixed Rate Cumulative Perpetual Preferred Shares, Series A, liquidation preference of \$1,000 per share (the "Preferred Shares"), issued under the provisions of the TARP Capital Purchase Program. As a result of this action, the Preferred Shares were redeemed in full, eliminating an annual dividend of \$2.1 million. In this connection, in determining net income available to common shareholders, the Company recognized in the second quarter a \$1.2 million charge for accelerated accretion which represents the difference between the carrying value and the liquidation value for the repurchased Preferred Shares.

On May 18, 2011, the parent company completed the repurchase of a warrant held by the U.S. Treasury. The ten-year warrant was issued on December 23, 2008 as part of the parent company's participation in the U.S. Treasury's TARP Capital Purchase Program, and entitled the U.S. Treasury to purchase 516,817 common shares of the parent company at an exercise price of \$12.19 per share. The parent company paid approximately \$0.95 million to the U.S. Treasury to repurchase the warrant. The parent company's repurchase of the warrant concluded its participation in the TARP Capital Purchase Program.

Note 6. Common Shares and Stock Incentive Plan

On March 9, 2011, the Company completed an underwritten public offering of 4.025 million common shares at an offering price of \$9.60 per share, which resulted in net proceeds of \$36.5 million after underwriting discounts and expenses.

On March 24, 2011, the Board of Directors, upon recommendation by the Compensation and Corporate Governance Committees, granted a total of 20,000 shares of restricted stock to the eight non-management directors ("director restricted shares") and 41,565 restricted shares to the Chairman, President and five Executive Vice Presidents ("officer restricted shares"). The director restricted shares will vest 25% annually over four years beginning on the first anniversary of the grant date. The officer restricted shares vest 50% on the second anniversary of the grant date and 25% on each of the third and fourth anniversaries of the grant date and had been limited by the 2008 agreement between the Company and the U.S. Treasury until the Preferred Shares were redeemed on April 27, 2011. The director restricted shares and the officer restricted shares were issued at \$9.71 per share, the closing price on the date of the grant. The agreements for both the director restricted shares and the officer restricted shares have additional

provisions regarding transferability and accelerated vesting of the shares and the continuation of performing substantial services for the Company.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

Note 10. Fair Value Measurements

The fair value of an asset or liability is the price that would be received upon a sale of that asset or paid to transfer that liability in an orderly transaction between market participants. A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The price in the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets and liabilities; it is not a forced transaction. Market participants are buyers and sellers in the principal market that are independent, knowledgeable, able to transact and willing to transact.

FASB Codification Topic 820: Fair Value Measurements and Disclosures establishes a hierarchy for valuation inputs that gives the highest priority to quoted prices in active markets for identical assets or liabilities and the lowest priority to unobservable inputs. The fair values hierarchy is as follows:

•Level 1 Inputs - Unadjusted quoted prices in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date. Examples of financial instruments generally included in this level are U.S. Treasury securities, equity and trust preferred securities that trade in active markets and listed derivative instruments.

Level 2 Inputs - Inputs other than quoted prices included in level 1 that are observable for the asset or liability, either directly or indirectly. These might include quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (such as interest rates, volatilities, prepayment speeds, credit risks, etc.) or inputs that are derived principally from or corroborated by market data by correlation or other means. Examples of financial instruments generally included in this level are corporate debt, mortgage-backed certificates issued by U.S. government corporations and government sponsored enterprises, equity securities that trade in less active markets and certain derivative instruments.

Level 3 Inputs - Unobservable inputs for determining the fair values of assets or liabilities that reflect an entity's own judgments about the assumptions that market participants would use in pricing the assets or liabilities. Examples of financial instruments generally included in this level are private equities, certain loans held for sale and other alternative investments.

Fair value of securities is based upon quoted market prices, where available (level 1 inputs). If such quoted market prices are not available, fair value is based upon market prices determined by an outside, independent entity that primarily uses as inputs, observable market-based parameters (level 2 inputs). Fair value of loans held for sale is based upon internally developed models that primarily use as inputs, observable market-based parameters. Valuation adjustments may be made to ensure that financial instruments are recorded at fair value. These adjustments may include amounts to reflect counterparty credit quality and the Company's creditworthiness, among other things, as well as unobservable parameters (level 3 inputs). Any such valuation adjustments are applied consistently over time. The Company's valuation methodologies may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. While management believes the Company's valuation methodologies are appropriate and consistent with other market participants, the use of different methodologies or assumptions to

determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date.

Securities available for sale. Securities classified as available for sale are generally reported at fair value utilizing level 1 and level 2 inputs. Investments in fixed income securities, exclusive of preferred stock and mortgage-backed securities, are valued based on evaluations provided by Interactive Data Corporation ("IDC"), a leading global provider of market data information. IDC evaluations represent an exit price or their opinion as to what a buyer would pay for a security, typically in an institutional round lot position in a current sale. IDC seeks to utilize market data and observations in its evaluation service, and gives priority to observable benchmark yields and reported trades. IDC utilizes evaluated pricing techniques that vary by asset class and incorporate available market information; because many fixed income securities do not trade on a daily basis, IDC applies available information through processes such as benchmark curves, benchmarking of similar securities, sector groupings and matrix pricing. Model processes such as option-adjusted spread models are used to value securities that have prepayment features. Substantially all securities available for sale evaluated in this manner are deemed to be level 2 valuations.

Notes to Consolidated Financial Statements (Unaudited)

For mortgage-backed securities issued by U.S. government corporations and government sponsored enterprises, management considers dealer indicative bids in the valuation process. Indicative bids are estimates of value and do not necessarily represent the price at which the dealer would be willing to transact. Such bids are compared to IDC evaluated prices for reasonableness as well as consistency with observable market conditions. All mortgage-backed securities are deemed to be valued based on level 2 inputs.

Publicly traded common and preferred stocks are valued by reference to the market closing price (last trade) on the measurement date (level 1 inputs). In the unlikely event that no trade occurred on the measurement date, reference would be made to an indicative bid or the last trade most proximate to the measurement date (level 2 inputs).

The following table summarizes financial assets measured at fair value on a recurring basis, segregated by the level of the valuation inputs within the fair value hierarchy utilized to measure fair value. There were no financial liabilities measured at fair value. There have been no transfers between level 1 and level 2 of the fair value hierarchy.

Notes to Consolidated Financial Statements (Unaudited)

Certain financial assets, such as collateral-dependent impaired loans, are measured at fair value on a non-recurring basis; that is, the instruments are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances (for example, when there is evidence of impairment). The following table summarizes the period end fair value of financial assets, based on significant unobservable (level 3) inputs, measured on a non-recurring basis:

	September 30, 2012	December 31, 2011
Impaired loans		
Commercial and industrial	\$ -	\$ 1,298
Commercial real estate	395	2,011
Other real estate owned, net	1,595	1,929

Impaired loans. At the time a loan is considered impaired, it is valued at the lower of cost or fair value. Impaired loans carried at fair value may receive specific allocations of the allowance for loan losses. For collateral dependent loans, fair value is commonly based on recent real estate appraisals. These appraisals may utilize a single valuation approach or a combination of approaches including comparable sales and the income approach. Adjustments are routinely made in the appraisal process by the appraisers to adjust for differences between the comparable sales and income data available. Such adjustments typically result in a level 3 classification of the inputs for determining fair value. Impaired loans are evaluated on a quarterly basis for additional impairment and adjusted accordingly.

Other real estate owned. Assets acquired through or instead of loan foreclosure are initially recorded at fair value less costs to sell when acquired, establishing a new cost basis. These assets are subsequently accounted for at lower of cost or fair value less estimated costs to sell. Fair values are generally based on third-party appraisals of the property utilizing a single valuation approach or a combination of approaches including comparable sales and the income approach. Adjustments are routinely made in the appraisal process by the appraisers to adjust for differences between the comparable sales and income data available. Such adjustments typically result in a level 3 classification of the inputs for determining fair value. In cases where the carrying amount exceeds the fair value, less costs to sell, an impairment loss is recognized.

Impaired loans that are measured for impairment using the fair value of the collateral dependent loans had a principal balance of \$0.7 million, with a valuation allowance of \$0.3 million at September 30, 2012, resulting in no additional provision for loan losses for the three months ended September 30, 2012. At December 31, 2011, impaired loans had a principal balance of \$4.5 million, and a valuation allowance of \$1.2 million.

Other real estate owned measured at fair value less costs to sell had a net carrying amount of \$1.6 million, which is made up of the outstanding balance of \$1.6 million, net of valuation allowance of \$22 thousand. For the three months ended September 30, 2012, \$-0- thousand of other real estate owned was written down through a charge to noninterest expense. For the nine months ended September 30, 2012, \$56 thousand of other real estate owned was written down through a charge to noninterest expense. At December 31, 2011, other real estate owned had net carrying amount of \$1.9 million, made up of the outstanding balance of \$1.9 million, net of valuation allowance of \$-0- million.

For those financial instruments that are not recorded at fair value in the Consolidated Balance Sheets, but are measured at fair value for disclosure purposes, management follows the same fair value measurement principles and

guidance as for instruments recorded at fair value.

Much of the information used to arrive at "fair value" is highly subjective and judgmental in nature and therefore the results may not be precise. The subjective factors include, among other things, estimated cash flows, risk characteristics, credit quality, interest rates and other market factors, all of which are subject to change. With the exception of investment securities and certain long-term debt, the Company's financial instruments are not readily marketable and market prices do not exist. Since negotiated prices for the instruments that are not readily marketable depend greatly on the motivation of the buyer and seller, the amounts that will actually be realized or paid per settlement or maturity of these instruments could be significantly different.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

Fair value estimates are made at a point in time, based on relevant market data as well as the best information available about the financial instrument. Fair value estimates for financial instruments for which no or limited observable market data is available are based on our judgments regarding current economic conditions, liquidity discounts, currency, credit, and interest rate risks, loss experience and other factors, all of which are level 3 inputs as discussed above. These estimates involve significant judgments and uncertainties and cannot be substantiated by comparison to quoted prices in active markets and cannot be determined with precision. As a result, such calculated fair value estimates may not be realizable in a current sale or immediate settlement of the instrument. In addition, there are inherent uncertainties in any fair value measurement technique, and changes in the underlying assumptions used in the fair value measurement technique, including discount rates, liquidity risks, and estimates of future cash flows, could significantly affect these fair value estimates.

A description of the methods, factors and significant assumptions utilized in estimating the fair values for significant categories of financial instruments follows:

Financial Instruments with Carrying Amounts Equal to Fair Value

The carrying amounts for cash and due from banks, interest-bearing deposits with other banks, accrued interest receivable, Federal funds purchased, securities sold under agreements to repurchase, commercial paper, other short-term borrowings, and accrued interest payable, as a result of their short-term nature, are considered to approximate fair value.

Investment Securities

The methods, factors and significant assumptions used to estimate fair values of all securities are described more fully beginning on page 35.

Loans, Net

The fair value of loans, net, which reprice within 90 days reflecting changes in the base rate, approximate their carrying amount. For other loans held in portfolio, the fair value is calculated based on discounted cash flow analyses, using interest rates currently being offered for loans with similar terms to borrowers of similar credit quality and for similar maturities. These calculations have been adjusted for credit risk based on the Company's historical credit loss experience.

The fair value for secured nonaccrual loans is the value of the underlying collateral which is sufficient to repay each loan. For other nonaccrual loans, the fair value represents book value less a credit risk adjustment based on the Company's historical credit loss experience.

The methods utilized to estimate the fair value of loans do not necessarily represent an exit price.

Deposits

FASB Codification Topic 825: Financial Instruments requires that the fair value of demand, savings, NOW (negotiable order of withdrawal) and certain money market deposits be equal to their carrying amount. The Company believes that the fair value of these deposits, including the value of deposit relationships, is greater than that prescribed by FASB Codification Topic 825. For other types of deposits with fixed maturities, fair value has been estimated based upon interest rates currently being offered on deposits with similar characteristics and maturities.

Advances—FHLB and Long-Term Borrowings

For advances—FHLB and long-term borrowings, the fair value is calculated based on discounted cash flow analyses, using interest rates currently being quoted for debt with similar characteristics and maturities.

Commitments to Extend Credit, Standby Letters of Credit and Financial Guarantees

The fees received for the issuance of commitments to extend credit, standby letters of credit, and financial guarantees, are considered to approximate fair value. Due to the uncertainty involved in attempting to assess the likelihood and timing of a commitment being drawn upon, coupled with lack of an established market and the wide diversity of fee structures, the Company does not believe it is meaningful to provide an estimate of fair value that differs from the amount of consideration received.

Notes to Consolidated Financial Statements (Unaudited)

The following is a summary of the carrying amounts and fair values of the Company's financial assets and liabilities. There were no transfers between Level 1 and Level 2 during the first nine months of 2012 or in 2011.

	Carrying	Fair Value Measurements at September 30, 2012			
	Value	Level 1	Level 2	Level 3	Total
FINANCIAL ASSETS

Note 11. New Accounting Standards

ASU No. 2011-03, "Transfers and Servicing (Topic 860) – Reconsideration of Effective Control for Repurchase Agreements." ASU 2011-03 is intended to improve financial reporting of repurchase agreements and other agreements

that both entitle and obligate a transferor to repurchase or redeem financial assets before their maturity. ASU 2011-03 removes from the assessment of effective control (i) the criterion requiring the transferor to have the ability to repurchase or redeem the financial assets on substantially the agreed terms, even in the event of default by the transferee, and (ii) the collateral maintenance guidance related to that criterion. ASU 2011-03 was effective for the Company on January 1, 2012. The effect of adopting this guidance did not have a significant impact on the Company's financial statements.

STERLING BANCORP AND SUBSIDIARIES

Notes to Consolidated Financial Statements (Unaudited)

ASU No. 2011-04, "Fair Value Measurement (Topic 820) – Amendments to Achieve Common Fair Value Measurements and Disclosure Requirements in U.S. GAAP and IFRSs." ASU 2011-04 amends Topic 820, "Fair Value Measurements and Disclosures," to converge the fair value measurement guidance in U.S. generally accepted accounting principles and International Financial Reporting Standards. ASU 2011-04 clarifies the application of existing fair value measurement requirements, changes certain principles in Topic 820 and requires additional fair value disclosures. ASU 2011-04 was effective for the Company on January 1, 2012. The effect of adopting this guidance did not have a significant impact on the Company's financial statements.

ASU No. 2011-05, "Comprehensive Income (Topic 220) – Presentation of Comprehensive Income." ASU 2011-05 amends Topic 220, "Comprehensive Income," to require that all nonowner changes in stockholders' equity be presented in either a single continuous statement of comprehensive income or in two separate but consecutive statements. Additionally, ASU 2011-05 requires entities to present, on the face of the financial statements, reclassification adjustments for items that are reclassified from other comprehensive income to net income in the statement or statements where the components of other comprehensive income are presented. The option to present components of other comprehensive income as part of the statement of changes in stockholders' equity was eliminated. ASU 2011-05 was effective for the Company on January 1, 2012. The effect of adopting this guidance did not have a significant impact on the Company's financial statements.

ASU No. 2011-08, "Intangibles-Goodwill and Other (Topic 350) – Testing Goodwill for Impairment." ASU 2011-08 amends Topic 350, "Intangibles-Goodwill and Other," so that entities testing goodwill for impairment have the option of performing a qualitative assessment before calculating the fair value of the reporting unit (i.e., step 1 of the goodwill impairment test). If an entity determines, on the basis of qualitative factors, that the fair value of the reporting unit is more likely than not less than the carrying amount, the two-step impairment test would be required. The ASU does not change how goodwill is calculated or assigned to reporting units, nor does it revise the requirement to test goodwill annually for impairment. ASU 2011-08 is effective for annual and interim goodwill impairment tests performed beginning after December 15, 2011, with early adoption permitted. The Company adopted ASU 2011-08 for its annual period ending December 31, 2011. The effect of adopting this guidance did not have a significant impact on the Company's financial statements.

ASU No. 2011-11, "Balance Sheet (Topic 210)—Disclosures about Offsetting Assets and Liabilities." ASU 2011-11 amends Topic 210, "Balance Sheet", to require an entity to disclose both gross and net information about financial instruments, such as sales and repurchase agreements and reverse sale and repurchase agreements and securities borrowing/lending arrangements, and derivative instruments that are eligible for offset in the statement of financial position and/or subject to master netting arrangement or similar agreement. ASU 2011-11 is effective for annual and interim periods beginning on January 1, 2013, and is not expected to have significant impact on the Company's financial statements.

ASU No. 2011-12, "Comprehensive Income (Topic 220)—Deferral of the Effective Date for Amendments to the Presentation of Reclassifications of Items Out of Accumulated Other Comprehensive Income in Accounting Standards Update No. 2011-05." ASU 2011-12 defers changes in ASU 2011-05 that relate to the presentation of reclassification adjustments to allow the FASB time to redeliberate whether to require presentation of such adjustments on the face of the financial statements to show the effects of reclassifications out of accumulated other comprehensive income on the components of net income and other comprehensive income. ASU 2011-12 allows entities to continue to report reclassifications out of accumulated other comprehensive income consistent with the presentation requirements in effect before ASU 2011-05. All other requirements in ASU 2011-05 are not affected by ASU 2011-12. ASU 2011-12

is effective for annual and interim periods beginning after December 15, 2011 and did not have a significant impact on the Company's financial statements.

Note 12. Subsequent Event

On October 29, 2012, Hurricane Sandy struck along the Atlantic seaboard and in the northeast, with the most significant impact felt in the New York metropolitan area. As a result, some properties underlying residential mortgage loans in the region will need to be re-inspected and/or re-appraised. This may cause delays in the closing and sale of loans to secondary market investors, or in some instances may cause loans to be declined, possibly delaying or reducing the realization of associated noninterest income. Management is unable to estimate the loss of revenue and storm-related costs at this time but does not expect these to be material to our financial condition or operating results for the fourth quarter of 2012.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following commentary presents management's discussion and analysis of the financial condition and results of operations of Sterling Bancorp (the "parent company"), a financial holding company under the Bank Holding Company Act of 1956, as amended by the Gramm-Leach-Bliley Act of 1999, and its subsidiaries, principally Sterling National Bank. Throughout this discussion and analysis, the term the "Company" refers to Sterling Bancorp and its subsidiaries and the term the "bank" refers to Sterling National Bank and its subsidiaries. This discussion and analysis should be read in conjunction with the consolidated financial statements and supplemental data contained elsewhere in this quarterly report and the Company's annual report on Form 10-K for the year ended December 31, 2011 (the "2011 Form 10-K"). Certain reclassifications have been made to prior years' financial data to conform to current financial statement presentations. Throughout management's discussion and analysis of financial condition and results of operations, dollar amounts in tables are presented in thousands, except per share data.

OVERVIEW

The Company provides a broad range of financial products and services, including business and consumer loans, commercial and residential mortgage lending and brokerage, mortgage warehouse lending, asset-based financing, factoring/accounts receivable management services, deposit services, trade financing, and equipment financing. The Company has operations principally in New York and conducts business throughout the United States. The general state of the U.S. economy and, in particular, economic and market conditions in New York, New Jersey and Connecticut (the "New York metropolitan area") have a significant impact on loan demand, the ability of borrowers to repay these loans and the value of any collateral securing these loans may also affect deposit levels. Accordingly, future general economic conditions are a key uncertainty that management expects will materially affect the Company's results of operations.

For the nine months ended September 30, 2012, the bank's average earning assets represented approximately 99.2% of the Company's average earning assets. Loans represented 64.6% and investment securities represented 32.6% of the bank's average earning assets for the first nine months of 2012.

The Company's primary source of earnings is net interest income, and its principal market risk exposure is interest rate risk. The Company is not able to predict market interest rate fluctuations, and its asset-liability management strategy may not prevent interest rate changes from having a material adverse effect on the Company's results of operations and financial condition.

Although management endeavors to minimize the credit risk inherent in the Company's loan portfolio, it must necessarily make various assumptions and judgments about the collectibility of the loan portfolio based on its experience and evaluation of economic conditions. If such assumptions or judgments prove to be incorrect, the current allowance for loan losses may not be sufficient to cover loan losses and additions to the allowance may be necessary, which would have a negative impact on net income.

There is intense competition in all areas in which the Company conducts its business. The Company competes with banks and other financial institutions, including savings and loan associations, savings banks, finance companies and credit unions. Many of these competitors have substantially greater resources and lending limits and provide a wider array of banking services. To a limited extent, the Company also competes with other providers of financial services, such as money market mutual funds, brokerage firms, consumer finance companies and insurance companies. Competition is based on a number of factors, including prices, interest rates, service, availability of products and geographic location.

The Company regularly evaluates acquisition opportunities and conducts due diligence activities in connection with possible acquisitions. As a result, acquisition discussions, and in some cases negotiations, regularly take place and future acquisitions could occur.

While the domestic economy continued to show moderate improvement during the 2012 third quarter, the pace was not consistent month-to-month and the rate of expansion also varied across regions of the country. Recent economic conditions during 2012, such as the stable to modest increase in residential real estate values in the principal markets the Company serves, have increased demand for residential real estate lending. The Company also believes there are opportunities to prudently expand its loan portfolio, particularly in the corporate and commercial real estate sectors, under current economic conditions. If some of the positive economic trends observed during the third quarter of 2012 were not to continue, the Company would expect its income from real estate lending to decrease from the current levels in the near term. In addition, due to the geographic concentration of the Company's loan portfolio in the New York metropolitan area, representing approximately 69.9% of total loans at September 30, 2012, an adverse change in market conditions in that geographic area could result in a decrease in our income from residential and commercial real estate lending. A significant prolonged decrease in income from our lending segments, if realized, may have a severe adverse impact on the operations of the Company.

INCOME STATEMENT ANALYSIS

Net interest income, which represents the difference between interest earned on interest-earning assets and interest incurred on interest-bearing liabilities, is the Company's primary source of earnings. Net interest income can be affected by changes in market interest rates as well as the level and composition of assets, liabilities and shareholders' equity. Net interest spread is the difference between the average rate earned, on a tax-equivalent basis, on interest-earning assets and the average rate paid on interest-bearing liabilities. The net yield on interest-earning assets ("net interest margin") is calculated by dividing tax-equivalent net interest income by average interest-earning assets. Generally, the net interest margin will exceed the net interest spread because a portion of interest-earning assets are funded by various noninterest-bearing sources, principally noninterest-bearing deposits and shareholders' equity. The increases (decreases) in the components of interest income and interest expense, expressed in terms of fluctuation in average volume and rate, are provided in the Rate/Volume Analyses shown beginning on page 58. Information as to the components of interest income and interest expense and average rates is provided in the Average Balance Sheets shown beginning on page 56.

Comparison of the Three Months Ended September 30, 2012 and 2011

The Company reported net income available to common shareholders for the three months ended September 30, 2012 of \$5.3 million, representing \$0.17 per share calculated on a diluted basis, compared to \$4.4 million, or \$0.14 per share calculated on a diluted basis, for the third quarter of 2011. The increase in net income available to common shareholders was primarily due to a \$1.2 million increase in net interest income and a \$1.0 million decrease in provision for loan losses. Those benefits were partially offset by a \$0.2 million decrease in noninterest income, a \$0.7 million increase in noninterest expenses and a \$0.3 million increase in the provision for income taxes.

Net Interest Income

Net interest income, on a tax-equivalent basis, was \$24.6 million for the third quarter of 2012 compared to \$23.5 million for the corresponding 2011 period. Net interest income benefitted from higher average loan balances, lower average balances for interest-bearing liabilities and lower cost of interest-bearing deposits. Net interest income also benefitted from the reclassification from accounts receivable management/factoring commissions and other fees into interest income from loans of revenues related to one of the Company's lending products, thereby more appropriately reflecting the characteristics of the product. Those benefits were partially offset by the impact of lower yields on loans and lower average investment securities balances. The net interest margin, on a tax-equivalent basis, was 4.02% for the third quarter of 2012 compared to 3.90% for the corresponding 2011 period. As discussed in detail below, the net interest margin was impacted by the mix of earning assets and funding, including the higher level of noninterest-bearing demand deposits.

Total interest income, on a tax-equivalent basis, aggregated \$27.4 million for the third quarter of 2012, up \$0.6 million from the corresponding 2011 period as the benefit of higher average loan balances more than offset the impact of lower average investment securities balances and lower yields. Total interest earning assets were \$2,432.5 million for the third quarter of 2012 compared to \$2,417.7 million in the prior year period. The tax-equivalent yield on interest-earning assets was 4.47% for both the 2012 and 2011 periods.

Interest earned on the loan portfolio increased to \$21.5 million for the third quarter of 2012 from \$19.7 million in the prior year period. Average loan balances amounted to \$1,632.9 million for the third quarter of 2012, an increase of \$178.9 million from an average of \$1,454.0 million in the prior year period. The increase in average loans, primarily due to the Company's business development activities, accounted for a \$2.7 million increase in interest earned on loans. The yield on the loan portfolio decreased to 5.26% for the third quarter of 2012 from 5.54% for the corresponding 2011 period, which was primarily attributable to the mix of average outstanding balances among the components of the loan portfolio.

Interest earned on the securities portfolio, on a tax-equivalent basis, decreased to \$5.8 million for the third quarter of 2012 from \$7.0 million in the corresponding 2011 period. Average outstandings decreased to \$735.1 million (30.2% of average earning assets) for the third quarter of 2012 from \$888.0 million (36.7% of average earning assets) in the third quarter of 2011. The average yield on investment securities was 3.13% for both the 2012 and the 2011 periods. The decrease in balances reflects the Company's decision to replace a portion of medium term (approximate 5 year original maturities), lower yielding U.S. Government Agency Securities that were called by the issuer with longer term (approximate 10-15 year original maturities) U.S. Government Agency securities having approximately the same or slightly higher yield thereby maintaining a pool of pledgable collateral. Management's Asset/Liability strategy continues to be designed to maintain a portfolio of corporate securities with a relatively short-term average life positioning the Company for higher interest rates in future periods. This strategy was implemented through the sale of available for sale securities, principally longer dated corporate securities.

Total interest expense decreased by \$0.6 million for the third quarter of 2012 from \$3.3 million for the corresponding 2011 period, primarily due to the impact of lower balances of interest-bearing liabilities and and lower rates paid for those funds.

Interest expense on deposits decreased to \$1.7 million for the third quarter of 2012 from \$2.2 million for the corresponding 2011 period, due to decreases in the cost of those funds coupled with the impact of lower balances. The average rate paid on interest-bearing deposits was 0.50%, which was 12 basis points lower than the prior year period. The decrease in average cost of deposits reflects the impact of deposit pricing strategies for NOW, Money market and certificates of deposit that are rolled over at their maturity date and the Company's purchase of certificates of deposit from various listing services and investments advisors which provided certificate of deposit balances at lower rates. Average interest-bearing deposits were \$1,349.8 million for the third quarter of 2012 compared to \$1,417.5 million for the prior year period, reflecting the impact of the Company's business development activities on its noninterest-bearing demand deposits that increased \$173.4 million from the prior year period.

Provision for Loan Losses

Based on management's continuing evaluation of the loan portfolio (discussed under "Asset Quality" beginning on page 48), the provision for loan losses for the third quarter of 2012 was \$2.0 million, compared to \$3.0 million in the prior year period. Factors affecting the provision for the third quarter of 2012 included current economic conditions during the quarter and a lower level of net charge-offs and lower nonaccrual loan balances.

The level of the allowance reflects changes in the size of the portfolio or in any of its components as well as management's continuing evaluation of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality and economic, political and regulatory conditions. Portions of the allowance may be allocated for specific credits; however, the entire allowance is available for any credit that, in management's judgment, should be charged off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company's control, including the performance of the Company's loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

As of September 30, 2012, the allowance for loan losses increased to \$22.2 million from \$20.0 million at December 31, 2011, primarily due to an increase in the level of commercial and industrial and residential real estate nonaccrual loans and higher commercial and industrial loan net charge-offs partially offset by a lower level of commercial real estate nonaccrual loans and lower equipment finance net charge-offs.

Noninterest Income

Noninterest income was \$10.5 million for the third quarter of 2012 compared to \$10.7 million in the corresponding 2011 period. The decrease was principally due to lower accounts receivable management/factoring commissions and other related fees and securities gains partially offset by higher mortgage banking income. Accounts receivable management/factoring commissions and other related fees was also negatively impacted by the level and mix of sales volume and by lower trade finance volume. Mortgage banking income increased principally due to higher volume of loans sold.

Noninterest Expense

Noninterest expenses were \$24.5 million for the third quarter of 2012, compared to \$23.8 million for the prior year period. Higher compensation and occupancy costs, reflecting the Company's continued investment in the franchise, were partially offset by lower professional fees.

Provision for Income Taxes

Reflecting an increase in pre-tax income of \$1.3 million, the provision for income taxes for the third quarter of 2012 was \$2.5 million, reflecting an effective tax rate of 31.7%, compared with a provision for income taxes of \$2.2 million for the third quarter of 2011, reflecting an effective tax rate of 33.4%. The decrease in the effective tax rate was primarily due to the impact of changes in the estimate of the annual effective tax rate for the third quarter of 2012 compared to the 2011 period partially offset by the impact of higher pre-tax income for the 2012 period compared to the 2011 period.

Comparison of the Nine Months Ended September 30, 2012 and 2011

The Company reported net income available to common shareholders for the nine months ended September 30, 2012 of \$14.8 million, representing \$0.48 per share calculated on a diluted basis, compared to \$10.2 million, or \$0.35 per share calculated on a diluted basis, for the first nine months of 2011. The increase in net income available to common shareholders was primarily due to a \$5.2 million increase in net interest income, a \$1.3 million decrease in the provision for loan losses and a \$2.1 million decrease in dividend and accretion on the preferred shares, resulting from the repurchase in the second quarter of 2011 of all of the preferred shares and the warrant issued under the TARP Capital Purchase Program. Those benefits were partially offset by a \$0.5 million decrease in noninterest income, a \$1.8 million increase in noninterest expenses and a \$1.6 million increase in the provision for income taxes.

Net Interest Income

Net interest income, on a tax-equivalent basis, was \$71.7 million for the first nine months of 2012 compared to \$66.4 million for the corresponding 2011 period. Net interest income benefitted from higher average loan balances, lower interest-bearing liabilities balances and lower cost of funding. Net interest income also benefitted from the reclassification from accounts receivable management/factoring commissions and other fees into interest income from loans of revenues related to one of the Company's lending products, thereby more appropriately reflecting the characteristics of the product. Those benefits were partially offset by the impact of lower yields on loans and lower average investment securities balances. The net interest margin, on a tax-equivalent basis, was 4.12% for the first nine months of 2012 compared to 3.96% for the corresponding 2011 period. As discussed in detail below, the net interest margin was impacted by the mix of earning assets and funding, including the higher level of noninterest-bearing demand deposits.

Total interest income, on a tax-equivalent basis, aggregated \$80.0 million for the first nine months of 2012, up \$3.7 million from the corresponding 2011 period as the benefit of higher average loan balances more than offset the impact of lower investment securities balances and lower yields. Total interest earning assets increased to \$2,363.0 million for the first nine months of 2012 compared to \$2,291.3 million in the prior year period. The tax-equivalent yield on interest-earning assets was 4.61% for the first nine months of 2012 compared to 4.55% for the corresponding 2011 period.

Interest earned on the loan portfolio increased to \$61.2 million for the first nine months of 2012 from \$55.0 million in the prior year period. Average loan balances amounted to \$1,530.4 million for the first nine months of 2012, an increase of \$185.5 million from an average of \$1,344.9 million in the prior year period. The increase in average loans, primarily due to the Company's business development activities, accounted for a \$8.2 million increase in interest earned on loans. The yield on the loan portfolio decreased to 5.52% for the first nine months of 2012 from 5.72% for the corresponding 2011 period, which was primarily attributable to the mix of average outstanding balances among the components of the loan portfolio.

Interest earned on the securities portfolio, on a tax-equivalent basis, decreased to \$18.4 million for the first nine months of 2012 from \$20.9 million in the corresponding 2011 period. Average outstandings decreased to \$767.8 million (32.5% of average earning assets) for the first nine months of 2012 from \$884.4 million (38.6% of average earning assets) in the first nine months of 2011. The average yield on investment securities increased to 3.19% for the first nine months of 2012 from 3.15% in the corresponding 2011 period. The decrease in balances and increase in yield reflect the Company's decision to replace a portion of medium term (approximate 5 year original maturities), lower yielding U.S. Government Agency Securities that were called by the issuer with longer term (approximate 10-15 year original maturities) U.S. Government Agency securities having approximately the same or slightly higher yield thereby maintaining a pool of pledgable collateral. Management's Asset/Liability strategy continues to be designed to maintain a portfolio of corporate securities with a relatively short-term average life positioning the Company for higher interest rates in future periods. This strategy was implemented through the sale of available for

sale securities, principally longer dated corporate securities and selected obligations of states and political subdivisions with longer average lives.

Total interest expense decreased by \$1.5 million for the first nine months of 2012 from \$9.8 million for the corresponding 2011 period, due to the impact of lower balances and rates paid for interest-bearing liabilities.

Interest expense on deposits decreased to \$5.1 million for the first nine months of 2012 from \$6.4 million for the corresponding 2011 period, due to decreases in the cost of those funds, coupled with the impact of changes in the mix. The average rate paid on interest-bearing deposits was 0.53%, which was 12 basis points lower than the prior year period. The decrease in average cost of deposits reflects the impact of deposit pricing strategies for NOW, Money market and certificates of deposit that are rolled over at their maturity date and the Company's purchase of certificates of deposit from various listing services and investment advisors which provided certificate of deposit balances at lower rates. Average interest-bearing deposits were \$1,273.0 million for the first nine months of 2012 compared to \$1,299.6 million for the prior year period.

Interest expense on borrowings decreased to \$3.3 million for the first nine months of 2012 from \$3.5 million for the corresponding 2011 period, primarily due to lower average balances. Average borrowings decreased to \$212.6 million for the first nine months of 2012 from \$238.1 million in the prior year period, reflecting a lesser reliance by the Company on wholesale borrowed funds.

Provision for Loan Losses

Based on management's continuing evaluation of the loan portfolio (discussed under "Asset Quality" beginning on page 48), the provision for loan losses for the first nine months of 2012 was \$7.8 million, compared to \$9.0 million in the prior year period. Factors affecting the provision for the first nine months of 2012 included current economic conditions during the quarter and a lower level of net charge-offs and lower nonaccrual loan balances.

The level of the allowance reflects changes in the size of the portfolio or in any of its components as well as management's continuing evaluation of industry concentrations, specific credit risks, loan loss experience, current loan portfolio quality and economic, political and regulatory conditions. Portions of the allowance may be allocated for specific credits; however, the entire allowance is available for any credit that, in management's judgment, should be charged off. While management utilizes its best judgment and information available, the ultimate adequacy of the allowance is dependent upon a variety of factors beyond the Company's control, including the performance of the Company's loan portfolio, the economy, changes in interest rates and the view of the regulatory authorities toward loan classifications.

As of September 30, 2012, the allowance for loan losses increased to \$22.2 million from \$20.0 million at December 31, 2011, primarily due to an increase in the level of commercial and industrial and residential real estate nonaccrual loans and higher commercial and industrial and commercial real estate loan net charge-offs partially offset by a lower level of commercial real estate nonaccrual loans and lower equipment finance net charge-offs.

Noninterest Income

Noninterest income decreased to \$31.6 million for the first nine months of 2012 from \$32.1 million in the corresponding 2011 period. The decrease principally resulted from lower accounts receivable management/factoring commissions and other related fees and securities gains partially offset by higher mortgage banking income. Accounts receivable management/factoring commissions and other related fees was also negatively impacted by the level and mix of sales volume and by lower trade finance volume. Mortgage banking income increased principally due to higher volume of loans sold.

Noninterest Expense

Noninterest expenses were \$71.5 million for the first nine months of 2012, compared to \$69.7 million for the prior year period. Higher compensation expense, reflecting the Company's continued investment in the franchise, were partially offset by reductions in deposit insurance premiums.

Provision for Income Taxes

Reflecting an increase in pre-tax income of \$4.2 million, the provision for income taxes for the first nine months of 2012 was \$6.7 million, reflecting an effective tax rate of 31.0%, compared with \$5.1 million for the first nine months of 2011, reflecting an effective tax rate of 29.2%. The increase in the effective tax rate was primarily due to a higher level of pre-tax income in the 2012 period compared to the 2011 period.

BALANCE SHEET ANALYSIS

Securities

At September 30, 2012, the Company's portfolio of securities totaled \$699.8 million, of which obligations of U.S. government corporations and government sponsored enterprises amounted to \$284.2 million, which is approximately 40.6% of the total portfolio. The Company has the intent and ability to hold to maturity securities classified as held to maturity, at which time it expects to receive full value for these securities. These securities are carried at cost, adjusted for amortization of premiums and accretion of discounts. The gross unrealized gains and losses on held to maturity securities were \$18.8 million and \$0.1 million, respectively. Securities classified as available for sale may be sold in the future, prior to maturity. These securities are carried at fair value. Net aggregate unrealized gains or losses on these securities are included, net of taxes, as a component of shareholders' equity. Given the generally high credit quality of the portfolio, management expects to realize all of its investments upon market recovery or the maturity of such instruments, and thus believes that any impairment in value is related to either interest rates or market conditions and therefore temporary. Available for sale securities included gross unrealized gains of \$6.1 million and gross unrealized losses of \$0.8 million. As of September 30, 2012, management does not have the intent to sell any of the securities classified as available for sale in the table on page 9 and management believes that it is not more likely than not that the Company would be required to sell any such securities before a recovery of cost.

In connection with an asset-liability management strategy described under Net Interest Income on page 42, during the third quarter 2012, the Company sold approximately \$18.3 million of securities with a weighted average life of about 1.7 years. A significant portion of the proceeds was used to fund loan growth.

The following table presents information regarding the average life and yields of certain available for sale ("AFS") and held to maturity ("HTM") securities:

September 30, 2012	Weighted Average Life AFS HTM		Weig	e Yield

Loan Portfolio

A management objective is to maintain the quality of the loan portfolio. The Company seeks to achieve this objective by maintaining rigorous underwriting standards coupled with regular evaluation of the creditworthiness of, and the designation of lending limits for, each borrower. The portfolio strategies include seeking industry and loan size diversification in order to minimize credit exposure and originating loans in markets with which the Company is familiar. Approximately 69.9% of loans are to borrowers located in the New York metropolitan area.

Total commercial lending, which includes commercial and industrial loans, loans to nondepository financial institutions, factored receivables, equipment finance receivables, commercial mortgage and construction and land development loans, represents approximately 86.3% of all loans. The Company's commercial and industrial loan and factored receivables portfolios represent approximately 46.8% of all loans. Primarily as the result of the Company's new mortgage warehouse lending product, loans to nondepository financial institutions, primarily located in the New York metropolitan area, represent 19.4% of all loans. Loans in these categories are typically made to small- and medium-sized businesses, primarily located in the New York metropolitan area, and range between \$250 thousand and \$20 million. The Company's leasing portfolio, which consists of finance leases, to lessees primarily located in the New York metropolitan area for various types of business equipment, represents approximately 9.5% of all loans. The Company's commercial real estate mortgage loans and the residential real estate loans, which represents approximately 9.8% and 13.0% of all loans, respectively, are comprised of mortgages secured by real property located principally in the New York metropolitan area. Sources of repayment are the borrower's operating profits, cash flows and liquidation of pledged collateral. Based on underwriting standards, loans may be secured in whole or in part by collateral such as liquid assets, accounts receivable, equipment, inventory and real property. The collateral securing any loan or lease may depend on the type of loan or lease and may vary in value based on market conditions.

The following table sets forth the composition of the Company's loans held for sale and loans held in portfolio:

	September 30, 2012				December 31, 2011			
		Balances	% of Tota	1	Balances	% of Tota	ıl

Asset Quality

Intrinsic to the lending process is the possibility of loss. In times of economic slowdown, the risk of loss inherent in the Company's portfolio of loans may increase. While management endeavors to minimize this risk, it recognizes that loan losses will occur and that the amount of these losses will fluctuate depending on the risk characteristics of the

loan portfolio, which in turn depend on current and future economic conditions, the financial condition of borrowers, the realization of collateral and the credit management process.

While the domestic economy continued to show moderate improvement during the 2012 third quarter, the pace was not consistent month-to-month and the rate of expansion also varied across regions of the country. Nonaccrual loans decreased by \$0.9 million at September 30, 2012 compared to December 31, 2011, primarily reflecting a \$2.4 million decrease in real estate – commercial mortgage loans, partially offset by a \$1.0 million increase in commercial and industrial loans and a \$0.5 million increase in real estate – residential mortgage loans. Net charge-offs for the third quarter of 2012 were \$0.9 million, compared to \$2.0 million for the corresponding 2011 period, reflecting lower net charge-offs of \$0.9 million in equipment financing receivables and \$0.4 million in real estate-residential mortgage loans, partially offset by higher net charge-offs of \$0.3 million in commercial and industrial loans. Nevertheless, a worsening of existing economic conditions will likely result in levels of charge-offs and nonaccrual loans that will be higher than those in prior periods.

The following table sets forth the amount of non-performing assets (nonaccrual loans and other real estate owned). Also shown are loans that are past due more than 90 days and are still accruing because they are both well secured or guaranteed by financially responsible third parties and are in the process of collection.

	September 30, 2012		De	cember 31, 2011	
Gross loans	\$	1,694,569	\$	1,534,779	
Nonaccrual loans					
Commercial and industrial	\$	1,794	\$	834	
Factored receivables		-		-	
Equipment financing receivables		316		370	
Real estate-residential mortgage		2,481		1,991	
Real estate-commercial mortgage		745		3,124	
Real estate-construction and land development		-		-	
Loans to individuals		101		39	
Total nonaccrual loans	\$	5,437	\$	6,358	
Other real estate owned		1,595		1,929	
Total non-performing assets	\$	7,032	\$	8,287	
Loans past due 90 days or more and still accruing	\$	428	\$	165	

At September 30, 2012, commercial and industrial nonaccruals represented 0.30% of commercial and industrial loans. There were 5 loans ranging between \$84 thousand and \$917 thousand made to borrowers located in 2 states.

At September 30, 2012, equipment financing nonaccruals represented 0.02% of lease financing receivables. The lessees of the equipment are located in 5 states. There were 9 leases ranging between approximately \$1 thousand and \$88 thousand. The value of the underlying collateral related to lease financing nonaccruals varies depending on the type and condition of equipment. While most leases are written on a recourse basis, with personal guarantees of the principals, the current value of the collateral is often less than the lease financing balance. Collection efforts include repossession and/or sale of leased equipment, payment discussions with the lessee, the principal and/or guarantors, and obtaining judgments against the lessee, the principal and/or guarantors. The balance is charged-off when it is determined that collection efforts are no longer productive. Factors considered in determining whether collection efforts are no longer productive include any amounts currently being collected, the status of discussions or negotiations with the lessee, the principal and/or guarantors, the cost of continuing efforts to collect, the status of any foreclosure or other legal actions, the value of the collateral, and any other pertinent factors.

At September 30, 2012, residential real estate nonaccruals represented 1.50% of residential real estate loans held in portfolio. There were 17 loans ranging between approximately \$4 thousand and \$658 thousand secured by properties located in 4 states.

At September 30, 2012, commercial real estate nonaccruals represented 0.45% of commercial mortgage real estate loans. There was 1 loan for \$745 thousand, secured by a property located in New York State.

At September 30, 2012, other real estate owned consisted of 8 properties with values ranging between \$6 thousand to \$555 thousand located in 4 states.

The allowance for loan losses is a reserve established through a provision for loan losses charged to expense, which represents management's best estimate of probable losses that have been incurred within the existing portfolio of loans. The allowance, in the judgment of management, is necessary to reserve for estimated loan losses and risks inherent in the loan portfolio. The Company's allowance for loan losses methodology includes allowance allocations calculated in accordance with FASB Codification Topic 310, Receivables and allowance allocations calculated in accordance with FASB Codification Topic 450, Contingencies. Accordingly, the methodology is based on historical experience by type of credit and internal risk grade, specific homogenous pools and specific loss allocations, with adjustments for current events and conditions. The Company's process for determining the appropriate level of the allowance for loan losses is designed to account for credit deterioration as it occurs. The provision for loan losses reflects loan quality trends, including the levels of trends related to nonaccrual loans, past due loans, potential problem loans, classified and criticized loans and net charge-offs or recoveries, among other factors. The provision for loan losses also reflects the totality of actions taken on all loans for a particular period. In other words, the amount of the provision reflects not only the necessary increases in the allowance for loan losses related to newly identified criticized loans, but it also reflects actions taken related to other loans including, among other things, any necessary increases or decreases in required allowance for specific loans or loan pools. See Note 3-Loans and Allowance for Loan Losses in the accompanying notes to consolidated financial statements included elsewhere in this report for further details regarding the methodology for estimating the appropriate level of the allowance for loan losses.

At September 30, 2012, the ratio of the allowance to loans held in portfolio, net unearned discounts, was 1.36% and the allowance was \$22.2 million. Loans 90 days past due and still accruing amounted to \$428 thousand. At such date, the Company's nonaccrual loans amounted to \$5.4 million; \$3.1 million of such loans were judged to be impaired within the scope of FASB Codification Topic 310, Receivables, and had a valuation allowance totalling \$1.5 million, which is included within the overall allowance for loan losses. Based on the foregoing, as well as management's judgment as to the current risks inherent in loans held in portfolio, the Company's allowance for loan losses was deemed adequate to absorb all probable losses on specifically known and other credit risks associated with the portfolio as of September 30, 2012. Net losses within loans held in portfolio are not statistically predictable and changes in conditions in the next twelve months could result in future provisions for loan losses different from the provision taken in the first nine months of 2012. Potential problem loans, which are loans that are currently performing under present loan repayment terms but where known information about possible credit problems of borrowers causes management to have serious doubts as to the ability of the borrowers to continue to comply with the present repayment terms, aggregated \$-0- at September 30, 2012 and 2011, respectively.

The following table sets forth certain information with respect to the Company's loan loss experience:

The following table presents the Company's allocation of the allowance for loan losses. This allocation is based on estimates by management and may vary from period to period based on management's evaluation of the risk characteristics of the loan portfolio. The amount allocated to a particular loan category of the Company's loans held in portfolio may not necessarily be indicative of actual future charge-offs in that loan category.

Loans to individuals	136	0.72	104	0.70			
Unallocated	160	-	138	-			

As of September 30, 2012, the allowance for loan losses increased \$2.1 million from \$20.0 million at December 31, 2011, primarily due to an increase in the allowance allocated to commercial and industrial (\$0.5 million), real estate residential mortgage (\$0.5 million), loans to nondepository financial institutions (\$0.4 million), real estate commercial mortgage (\$0.3 million) and factored receivables (\$0.3 million). The allowance allocated to commercial and industrial and to residential real estate mortgage increased primarily due to higher nonaccrual loan balances. The increases in the allowance to loans to nondepository financial institutions and real estate commercial mortgage were primarily due to higher loan balances in those categories. The allowance allocated to factored receivables increased primarily due to higher net charge-offs.
