## Quarterly Production Report

Release **Immediate**  
 time

Date **31 January**  
**2001**

Quarter **Ended 31**  
**December**  
**2000**

### Minerals

- Steelmaking and Energy Materials

	quarter	% change	YTD	% change
Coal	7.549	30	13.775	10
<i>(Queensland) (millions tonnes)</i>				
Iron Ore	13.700	24	28.329	17
<i>(West Aust) (millions tonnes)</i>				
Briquettes	82	-	131	-
<i>(Venezuela) ('000 tonnes)</i>				
Briquettes	291	98	396	53
<i>(West Aust) ('000 tonnes)</i>				

Queensland coal production for the quarter ended 31 December 2000 was higher due to the acquisition of QCT Resources Limited in November and increased volumes at Crinum mine and South Walker Creek. New Mexico Coal also recorded increased production as a result of higher tonnage requirements from the San Juan Generating Station. WA iron ore production and shipments were higher for the quarter reflecting the impact of rail damage caused by heavy rains during the same period last year. Yandi ore shipments in the December quarter were lower as a result of reduced customer demand.

BHP's WA HBI plant reported higher production due to successful technical modifications on all production trains. Three trains were operated simultaneously during December 2000. Shipments for WA HBI were lower for the quarter due to reduced demand for the product. Orinoco HBI production during the quarter was constrained due to significant production ramp-up difficulties.

## - Non-Ferrous and Industrial Materials

	quarter	% change	YTD	% change
Copper in concentrate	190	12	379	5
<i>('000 tonnes)</i>				
Diamonds	318	0	626	(1)
<i>(Ekati) ('000 carats)</i>				
Silver in concentrate	8 194	19	16 389	20
<i>(Cannington) ('000 ounces)</i>				

Production of copper in concentrate for the quarter ended 31 December was higher due to increased copper production at Ok Tedi as a result of mining softer ore, better mill performance and better head grades. Higher production volumes were also recorded at Tintaya, while production at Escondida was in line with the corresponding quarter last year. Shipments during the quarter were also higher due to the deferral of some shipments at Escondida and Ok Tedi from the September 2000 quarter.

Ekati diamond production was in line with production for the corresponding quarter last year.

Cannington silver production was higher for the first quarter compared to the same quarter last year due to mine optimisation and favourable head grades. Lower shipments of silver, lead and zinc were recorded from Cannington as a result of a shipment being delayed from December 2000 to January 2001.

### Petroleum

	quarter	% change	YTD	% change
Oil & Condensate	20 085	5	40 904	11
<i>('000 barrels)</i>				
Natural Gas	60.8	3	122.6	6
<i>(bcf)</i>				

Oil and condensate production for the quarter ending 31 December 2000 was higher compared to the corresponding quarter last year due to the addition of the Lambert and Hermes fields to the Wanaea/Cossack facilities and increased production from the Laminaria/Corallina, Buffalo and Griffin fields.

This was in part offset by lower Bass Strait production due to natural field decline and curtailed production resulting from an accidental rupture of the LPG pipeline between the Longford Gas Plant and Long Island Point.

Gas production for the quarter was higher than the corresponding quarter reflecting increased production from the North American assets and the Bruce field. This was partly offset by planned and unplanned shutdowns of onshore and offshore facilities at the North West Shelf.

### Steel

	quarter	% change	YTD	% change
--	---------	----------	-----	----------

Raw Steel	1 372	1	2 827	2
<i>(Core) ('000 tonnes)</i>				
Raw Steel	135	(56)	508	(53)
<i>(Discontin.) ('000 tonnes)</i>				

Raw steel production (core steel operations) for the quarter ended 31 December was higher than for the corresponding quarter last year due to higher production from Port Kembla. Lower production of marketable steel products was due in part to reduced building products volumes. The outlook for domestic steel has deteriorated for the remainder of the financial year as a result of the downturn in the domestic construction and building markets. Despatches were higher for the quarter due to increased domestic sales in New Zealand and the economic recovery in Asia.

Raw steel production (discontinuing steel operations) was lower for the quarter compared to the corresponding period last year as a result of the spinout of OneSteel, effective 31 October 2000.
