Syngenta receives approval for new corn technologies in Argentina

- Stacked trait approval broadens offer to Argentine growers
- Reinforces Syngenta corn offer in Argentina

Syngenta announced today that it has received cultivation approval for its genetically modified corn trait Bt11xGA21 from the Ministry of Agriculture in Argentina. Bt11xGA21 is a double-stacked corn trait combining insect resistance and herbicide tolerance in a single product. The product will be available to Argentine growers for the 2010/2011 season.

Davor Pisk, Chief Operating Officer Syngenta Seeds, said: “We are pleased to receive this approval, which underlines the ongoing support for modern agricultural technology in Argentina. Syngenta already has a strong position in corn in Argentina and this approval will further strengthen our offer in the country, while bringing growers higher value and more convenience.”

Bt11xGA21 stacked corn is approved for cultivation in the United States, Canada and since November in Brazil.

Syngenta is one of the world's leading companies with more than 24,000 employees in over 90 countries dedicated to our purpose: Bringing plant potential to life. Through world-class science, global reach and commitment to our customers we help to increase crop productivity, protect the environment and improve health and quality of life.
