Safe Harbor Statement under the Private Securities Litigation Reform Act of 1995.

This Form 10-Q contains forward-looking statements. Statements that are not historical or current facts, including statements about beliefs and expectations, are forward-looking statements. These statements often include the words may, could, would, should, believes, expects, anticipates, estimates, intends, plans, targets, p projects, outlook or similar expressions. These forward-looking statements cover, among other things, anticipated future revenue and expenses and the future plans and prospects of U.S. Bancorp. Forward-looking statements involve inherent risks and uncertainties, and important factors could cause actual results to differ materially from those anticipated, including changes in general business and economic conditions, changes in interest rates, legal and regulatory developments, increased competition from both banks and non-banks, changes in customer behavior and preferences, effects of mergers and acquisitions and related integration, effects of critical accounting policies and judgments, and management s ability to effectively manage credit risk, market risk, operational risk, legal risk, and regulatory and compliance risk. For discussion of these and other risks that may cause actual results to differ from expectations, refer to our Annual Report on Form 10-K for the year ended December 31, 2006, on file with the Securities and Exchange Commission, including the sections entitled Risk Factors and Corporate Risk Profile. Forward-looking statements speak only as of the date they are made, and U.S. Bancorp undertakes no obligation to update them in light of new information or future events.

Management s Discussion and Analysis

OVERVIEW

Earnings Summary U.S. Bancorp and its subsidiaries (the Company) reported net income of $1,176 million for the third quarter of 2007 or $.67 per diluted common share, compared with $1,203 million, or $.66 per diluted common share for the third quarter of 2006. Return on average assets and return on average common equity were 2.09 percent and 23.3 percent, respectively, for the third quarter of 2007, compared with returns of 2.23 percent and 23.6 percent, respectively, for the third quarter of 2006. The Company s results for the third quarter of 2007 declined from the same period of 2006, as strong fee-based revenue growth in Payment Services and Wealth Management & Securities Services was offset by higher operating expenses and an expected increase in credit costs. In addition, the third quarter of 2006 included a $32 million gain on the sale of equity interests in a cardholder association.

Total net revenue, on a taxable-equivalent basis, for the third quarter of 2007, was $108 million (3.2 percent) higher than the third quarter of 2006, primarily reflecting a 5.5 percent increase in noninterest income. Net interest income also increased slightly from a year ago, driven by growth in earning assets. Noninterest income growth was driven primarily by organic business growth in fee-based revenue. This growth in noninterest income was muted somewhat by adverse market conditions experienced during the third quarter of 2007. These market factors reduced trading and other revenue by approximately $21 million from a year ago. Additionally, the third quarter of 2006 included a $32 million gain on the sale of equity interests in a cardholder association.

Total noninterest expense in the third quarter of 2007 was $90 million (5.9 percent) higher than in the third quarter of 2006, principally due to higher operating costs from investments in personnel, branches, customer service initiatives, marketing, business integration costs related to acquisitions, costs related to tax-advantaged investments and an increase in credit-related costs for other real estate owned and collection activities.

The provision for credit losses for the third quarter of 2007 increased $64 million (47.4 percent), compared with the third quarter of 2006. The increase in the provision for credit losses from a year ago reflected growth in credit card accounts and higher commercial loan losses. In addition, the provision for credit losses in the third quarter of 2006 partially reflected the favorable residual impact on net charge-offs, principally for credit cards and other retail charge-offs, resulting from changes in bankruptcy laws in the fourth quarter of 2005. Net charge-offs in the third quarter of 2007 were $199 million, compared with $135 million in the third quarter of 2006. Refer to Corporate Risk Profile for further information on the provision for credit losses, net charge-offs, nonperforming assets and factors considered by the Company in assessing the credit quality of the loan portfolio and establishing the allowance for credit losses.

The Company reported net income of $3,462 million for the first nine months of 2007 or $1.94 per diluted common share, compared with $3,557 million, or $1.95 per diluted common share for the first nine months of 2006. Return on average assets and return on average common equity were 2.09 percent and 22.9 percent, respectively, for the first nine months of 2007, compared with returns of 2.24 percent and 23.7 percent, respectively, for the first nine months of 2006. The Company s results for the first nine months of 2007 declined from the same period of 2006, as strong fee-based revenue growth was offset by higher operating expenses and an expected increase in credit costs. In addition, the first nine months of 2006 included $67 million of gains from the initial public offering and subsequent sale of equity interests of a cardholder association.

Total net revenue, on a taxable-equivalent basis, for the first nine months of 2007, was $184 million (1.8 percent) higher than the first nine months of 2006, primarily reflecting a 5.4 percent increase in noninterest income, partially offset by a 1.8 percent decline in net interest income from a year ago. Noninterest income growth was driven by organic business growth and expansion in payment processing and trust businesses. Fee-based revenue growth was partially offset by the net favorable impact in the first nine months of 2006 of $84 million from several previously reported items, including a $44 million trading gain related to certain derivatives, $67 million of gains from the initial public offering and subsequent sale of a cardholder association and a $10 million gain related to a favorable settlement in the merchant processing business, offset by a $37 million reduction in mortgage banking revenue due principally to the adoption of fair value accounting standards for mortgage servicing rights (MSRs).

Total noninterest expense in the first nine months of 2007 was $245 million (5.4 percent) higher than in the first nine months of 2006, principally due to higher operating costs from investments in business initiatives, business integration costs related to acquisitions, costs related to tax-advantaged investments, credit-related costs for other real estate owned and collection activities and an increase in merchant airline processing expenses primarily due to sales volumes and business expansion with a major airline. Growth in expenses from a year ago was partially offset by an $11 million debt prepayment charge recorded in the first nine months of 2006.

The provision for credit losses for the first nine months of 2007 increased $192 million (51.2 percent), compared with the same period of 2006. The increase in the provision for credit losses from a year ago reflected growth in credit card accounts and higher commercial loan losses. In addition, the provision for credit losses in the first nine months of 2006 partially reflected the favorable residual impact on net charge-offs, principally for credit cards and other retail charge-offs, resulting from changes in bankruptcy laws in fourth quarter of 2005. Net charge-offs in the first nine months of 2007 were $567 million, compared with $375 million in the first nine months of 2006. Refer to Corporate Risk Profile for further information on the provision for credit losses, net charge-offs, nonperforming assets and factors considered by the Company in assessing the credit quality of the loan portfolio and establishing the allowance for credit losses.

STATEMENT OF INCOME ANALYSIS

Net Interest Income Net interest income, on a taxable-equivalent basis, was $1,685 million in the third quarter of 2007, compared with $1,673 million in the third quarter of 2006. Net interest income, on a taxable-equivalent basis, was $5,001 million in the first nine months of 2007, compared with $5,095 million in the first nine months of 2006. Compared with the same periods of 2006, average earning assets increased $7.7 billion in both the third quarter and first nine months of 2007, or 4.1 percent and 4.2 percent, respectively. The increases were primarily driven by growth in total average loans of $6.0 billion (4.3 percent) and $6.4 billion (4.6 percent) in the third quarter and first nine months of 2007, respectively, compared with the same periods of 2006. The positive impact on net interest income from the growth in earning assets was offset by a lower net interest margin. The net interest margin in the third quarter and first nine months of 2007 was 3.44 percent and 3.46 percent, respectively, compared with 3.56 percent and 3.68 percent, respectively, for the same periods of 2006, reflecting the competitive environment and the impact of a flat yield curve during the past several quarters. Compared with the same periods of 2006, credit spreads tightened by approximately 5 basis points in the third quarter and 8 basis points in the first nine months of 2007 across most lending products due to competitive loan pricing. In addition, funding costs were higher as rates paid on interest-bearing deposits increased and the funding mix continued to shift toward higher cost deposits and other funding sources. Net interest margin was also impacted by a decline in net free funds due to a decline in noninterest-bearing deposits, investment in bank-owned life insurance, share repurchases and the impact of acquisitions. An increase in loan fees partially offset these factors.

The Company anticipates the net interest margin to remain relatively stable throughout the remainder of the year. Refer to the Consolidated Daily Average Balance Sheet and Related Yields and Rates table for further information on net interest income.

Average loans for the third quarter and first nine months of 2007 were $6.0 billion (4.3 percent) and $6.4 billion (4.6 percent) higher, respectively, than the same periods of 2006, reflecting growth in retail loans, commercial loans and residential mortgages, partially offset by a decline in commercial real estate loans. Average credit card balances for the third quarter and first nine months of 2007 increased $2.1 billion (26.9 percent) and $1.8 billion (24.1 percent), respectively, compared with the same periods of 2006, as a result of growth in branch originated, co-branded and financial institution partner portfolios.

Average investment securities in the third quarter and first nine months of 2007 were $1.3 billion (3.3 percent) and $1.0 billion (2.6 percent) higher, respectively, than the same periods of 2006, driven primarily by an increase in the municipal securities portfolio, partially offset by a reduction in mortgage-backed assets.

Average noninterest-bearing deposits for the third quarter and first nine months of 2007 decreased $1.3 billion (4.5 percent) and $1.1 billion (4.0 percent), respectively, compared with the same periods of 2006, reflecting a decline in business demand deposits within most business lines as customers utilized deposit balances to fund business growth and meet other liquidity requirements.

Average total savings deposits increased $1.0 billion (1.9 percent) and $.3 billion (.5 percent) in the third quarter and first nine months of 2007, compared with the same periods of 2006, as increases in interest

Table of Contents

checking balances were offset by declines in money market and savings balances, primarily within Consumer Banking. Interest checking balances for the third quarter and first nine months of 2007 increased $2.5 billion (10.4 percent) and $2.3 billion (9.9 percent), respectively, compared with the same periods of 2006, due to higher broker-dealer, government and institutional trust balances. Average money market and savings balances for the third quarter and first nine months of 2007 decreased $1.4 billion (4.5 percent) and $2.0 billion (6.2 percent), respectively, compared with the same periods of 2006, as a result of the Company s deposit pricing decisions for money market products in relation to other fixed-rate deposit products. A portion of branch-based money market savings accounts migrated to fixed-rate time certificates, as customers took advantage of higher interest rates for these products.

Average time certificates of deposit less than $100,000 were higher in the third quarter and first nine months of 2007 by $.7 billion (5.2 percent) and $1.0 billion (7.3 percent), respectively, compared with the same periods of 2006. The year-over-year growth in time certificates less than $100,000 was primarily due to consumer-based time deposits, reflecting customer migration to higher rate deposit products. Average time deposits greater than $100,000 decreased $1.3 billion (5.9 percent) and $1.0 billion (4.6 percent) in the third quarter and first nine months of 2007, respectively, compared with the same periods of 2006. Time deposits greater than $100,000 are largely viewed as purchased funds and are managed at levels deemed appropriate, given alternative funding sources.

Provision for Credit Losses The provision for credit losses for the third quarter and first nine months of 2007 increased $64 million (47.4 percent) and $192 million (51.2 percent), respectively, compared with the same periods of 2006. The increases in the provision for credit losses in the third quarter and first nine months of 2007 from the same periods a year ago reflected growth in credit card accounts and higher commercial loan losses. In addition, the provision for credit losses in the third quarter and first nine months of 2006 partially reflected the favorable residual impact on net charge-offs, principally for credit cards and other retail charge-offs, resulting from changes in bankruptcy laws in the fourth quarter of 2005. Net charge-offs were $199 million in the third quarter and $567 million in the first nine months of 2007, compared with $135 million in the third quarter and $375 million in the first nine months of 2006. Refer to Corporate Risk Profile for further information on the provision for credit losses, net charge-offs, nonperforming assets and factors considered by the Company in assessing the credit quality of the loan portfolio and establishing the allowance for credit losses.

Noninterest Income Noninterest income in the third quarter and first nine months of 2007 was $1,844 million and $5,395 million, respectively, compared with $1,748 million and $5,117 million in the same periods of 2006. The $96 million (5.5 percent) increase during the third quarter and $278 million (5.4 percent) increase during the first nine months of 2007, compared with the same periods in 2006, were driven by strong organic fee-based revenue growth, offset somewhat by market conditions in the third

* *Not meaningful.*

quarter of 2007 adversely impacting valuations for certain trading securities and loans held for sale within a commercial real estate joint venture. Additionally, the third quarter and first nine months of 2006 were impacted by several previously reported, one-time items.

The growth in credit and debit card revenue was primarily driven by an increase in customer accounts and higher customer transaction volumes from a year ago. The corporate payment products revenue growth reflected organic growth in sales volumes and card usage, and an acquired business. Merchant processing services revenue growth reflected an increase in customers and sales volumes. Trust and investment management fees increased year-over-year due to core account growth and favorable market conditions. Deposit service charges grew year-over-year due primarily to increased transaction-related fees and continued growth in net new checking accounts. Additionally, deposit account-related revenue, traditionally reflected in this fee category, continued to migrate to yield-related loan fees as customers utilized new consumer products. Treasury management fees increased over the prior year due to new customer growth, higher cross-selling activities with existing customers and new product offerings. Mortgage banking revenue grew year-over-year due to an increase in mortgage servicing income and production gains, partially offset by a change in the valuation of MSRs and related economic hedging activities. Mortgage banking revenue further increased in the first nine months of 2007 due to changes in accounting for MSRs and mortgage banking revenue that resulted in a $37 million reduction in revenue in the first quarter of 2006. Commercial products revenue increased in the third quarter of 2007, compared with the same period of the prior year, due to higher foreign exchange revenue, syndication fees and commercial leasing revenue.

Favorable changes in fee-based revenue were partially offset by a decline in other income. The reduction in other income in the third quarter of 2007, compared with the third quarter of 2006, reflected the $32 million gain recognized in the third quarter of 2006 related to the sale of equity interests of a cardholder association. The decline also included third quarter 2007 market valuation losses of approximately $21 million, partially offset by an increase in revenue from investment in bank-owned life insurance programs. Other income further declined in the first nine months of 2007, compared with the first nine months of 2006, as a result of a $10 million favorable settlement within the merchant processing business and a $44 million trading gain related to terminating certain interest rate swaps recognized in the first quarter of 2006, as well as a $35 million gain on the initial public offering of a cardholder association recognized in the second quarter of 2006.

Noninterest Expense Noninterest expense was $1,628 million in the third quarter and $4,813 million in the first nine months of 2007, reflecting increases of $90 million (5.9 percent) and $245 million (5.4 percent), respectively, from the same periods of 2006. Compensation expense increased due to ongoing bank operations and acquired businesses. Net occupancy and equipment expense increased primarily due to acquisitions and branch-based business initiatives. Professional services expense for the first nine months of 2007 increased over the same period of the prior year due to revenue enhancing business initiatives and higher legal fees associated with the establishment of a bank charter in Ireland to support pan-European payment processing and litigation. Marketing and

Table of Contents

business development expense for the third quarter and first nine months of 2007 increased year-over-year due to the timing of customer promotions, solicitations and advertising activities. Postage, printing and supplies expense increased primarily due to changes in postal rates. Other intangibles expense increased from the same periods of 2006 due to recent acquisitions in Consumer Banking, Wealth Management & Securities Services and Payment Services. Other expense increased over the prior year due to costs related to affordable housing and other tax-advantaged investments, an increase in merchant processing expenses driven by transaction volumes, integration expenses related to recent acquisitions and higher credit-related costs for other real estate owned and loan collection activities.

Income Tax Expense The provision for income taxes was $508 million (an effective rate of 30.2 percent) for the third quarter and $1,501 million (an effective rate of 30.2 percent) for the first nine months of 2007, compared with $532 million (an effective rate of 30.7 percent) and $1,678 million (an effective rate of 32.1 percent) for the same periods of 2006. For further information on income taxes, refer to Note 7 of the Notes to Consolidated Financial Statements.

BALANCE SHEET ANALYSIS

Loans The Company s total loan portfolio was $149.0 billion at September 30, 2007, compared with $143.6 billion at December 31, 2006, an increase of $5.4 billion (3.8 percent). The increase was driven by growth in retail loans, commercial loans and residential mortgages, partially offset by a slight decrease in commercial real estate loans. The $1.8 billion (3.9 percent) increase in commercial loans was primarily driven by new customer relationships, utilization under lines of credit and growth in corporate payment card and commercial leasing balances.

Commercial real estate loans decreased slightly to $28.5 billion at September 30, 2007, compared with $28.6 billion at December 31, 2006. The decline in commercial real estate balances reflected customer refinancing, a management decision to reduce condominium construction financing in selected markets and a slowdown in residential homebuilding impacting construction lending.

Residential mortgages held in the loan portfolio increased $1.3 billion (6.0 percent) at September 30, 2007, compared with December 31, 2006, reflecting an increase in consumer finance originations.

Total retail loans outstanding, which include credit card, retail leasing, home equity and second mortgages and other retail loans, increased $2.5 billion (5.2 percent) at September 30, 2007, compared with December 31, 2006. The increase was primarily driven by growth in credit card, installment and home equity loans, partially offset by decreases in retail leasing and student loan balances.

At September 30, 2007, the residential and home equity and second mortgage portfolios included approximately $3.2 billion and $.9 billion, respectively, of loans to customers that may be defined as sub-prime borrowers. Together, these balances represented 2.8 percent of the Company s total loans outstanding at September 30, 2007.

Loans Held for Sale Loans held for sale, consisting primarily of residential mortgages and student loans to be sold in the secondary market, were $4.6 billion at September 30, 2007, compared with $3.3 billion at December 31, 2006. The increase in loans held for sale was principally due to loan originations and the timing of sales during the first nine months of 2007.

Investment Securities Investment securities, including available-for-sale and held-to-maturity, totaled

Table 4 Available-for-Sale Investment Securities

	September 30, 2007				December 31, 2006			
(Dollars in Millions)	Amortized Cost	Fair Value	Weighted-Average Maturity in Years	Weighted-Average Yield (c)	Amortized Cost	Fair Value	Weighted-Average Maturity in Years	Weighted-Average Yield (c)

(a) *Information related to asset and mortgage-backed securities included above is presented based upon weighted-average maturities anticipating future prepayments.*

(b) *Information related to obligations of state and political subdivisions is presented based upon yield to first optional call date if the security is purchased at a premium, yield to maturity if purchased at par or a discount.*

(c) *Average yields are presented on a fully-taxable equivalent basis under a tax rate of 35 percent. Yields are computed based on historical cost balances. Average yield and maturity calculations exclude equity securities that have no stated yield or maturity.*

$40.4 billion at September 30, 2007, compared with $40.1 billion at December 31, 2006, reflecting purchases of $5.4 billion of securities, which were offset by sales, maturities, prepayments and a $.5 billion increase in the unrealized loss on the available-for-sale portfolio. As of September 30, 2007, approximately 36 percent of the investment securities portfolio represented adjustable-rate financial instruments, compared with 37 percent at December 31, 2006. Adjustable-rate financial instruments include variable-rate collateralized mortgage obligations, mortgage-backed securities, agency securities, adjustable-rate money market accounts, asset-backed securities, corporate debt securities and floating-rate preferred stock.

The Company conducts a regular assessment of its investment portfolios to determine whether any securities are other-than-temporarily impaired. The substantial portion of securities that have unrealized losses are either government securities, issued by government-backed agencies or privately issued securities with high investment grade credit ratings. As of the reporting date, the Company expects to receive all contractual principal and interest related to these securities.

Deposits Total deposits were $122.7 billion at September 30, 2007, compared with $124.9 billion at December 31, 2006, a decrease of $2.1 billion (1.7 percent). The decrease in total deposits was primarily the result of decreases in noninterest-bearing deposits and money market savings accounts, partially offset by increases in interest checking accounts and time deposits. The $3.9 billion (12.0 percent) decrease in noninterest-bearing deposits was primarily due to a decline of business demand deposits. The $2.5 billion (9.7 percent) decrease in money market savings account balances reflected the Company s deposit pricing decisions for money market products in relation to other fixed-rate deposit products and business customer decisions to utilize deposit liquidity. Interest checking account balances increased $2.5 billion (10.0 percent) primarily due to higher broker-dealer, government and institutional trust balances.

Time deposits greater than $100,000 increased $1.1 billion (5.1 percent), including a $.5 billion (10.9 percent) increase in personal certificates of deposit, at September 30, 2007, compared with December 31, 2006. Time deposits greater than $100,000 are largely viewed as purchased funds and are managed to levels deemed appropriate given alternative funding sources.

Borrowings The Company utilizes both short-term and long-term borrowings to fund growth of assets in excess of deposit growth. Short-term borrowings, which include federal funds purchased, commercial paper, repurchase agreements, borrowings secured by high-grade assets and other short-term borrowings, were $28.9 billion at September 30, 2007, compared with $26.9 billion at December 31, 2006. Short-term funding is managed within approved liquidity policies. Long-term debt was $45.2 billion at September 30, 2007, compared with $37.6 billion at December 31, 2006, reflecting the issuances of $3.0 billion of convertible senior debentures, $1.3 billion of subordinated notes, $1.4 billion of medium-term bank notes and $.5 billion of junior subordinated debentures, and the net addition of $8.8 billion of Federal Home Loan Bank (FHLB) advances, partially offset by long-term debt maturities and repayments. The $7.6 billion (20.3 percent) increase in long-term debt reflected wholesale funding associated with the Company s asset growth and asset/liability management activities. Refer to the Liquidity Risk Management section for discussion of liquidity management of the Company.

CORPORATE RISK PROFILE

Overview Managing risks is an essential part of successfully operating a financial services company. The most prominent risk exposures are credit, residual value, operational, interest rate, market and liquidity risk. Credit risk is the risk of not collecting the interest and/or the principal balance of a loan or investment when it is due. Residual value risk is the potential reduction in the end-of-term value of leased assets or the residual cash flows related to asset securitization and other off-balance sheet structures. Operational risk includes risks related to fraud, legal and compliance risk, processing errors, technology, breaches of internal controls and business continuation and disaster recovery risk. Interest rate risk is the potential reduction of net interest income as a result of changes in interest rates, which can affect the repricing of assets and liabilities differently, as well as their market value. Market risk arises from fluctuations in interest rates, foreign exchange rates, and security prices that may result in changes in the values of financial instruments, such as trading and available-for-sale securities that are accounted for on a mark-to-market basis. Liquidity risk is the possible inability to fund obligations to depositors, investors or borrowers. In addition, corporate strategic decisions, as well as the risks described above, could give rise to reputation risk. Reputation risk is

the risk that negative publicity or press, whether true or not, could result in costly litigation or cause a decline in the Company s stock value, customer base or revenue.

Table 5 Delinquent Loan Ratios as a Percent of Ending Loan Balances

90 days or more past due **excluding** nonperforming loans	September 30, 2007	December 31, 2006

Total loans	.30%	.24%

90 days or more past due **including** nonperforming loans	September 30, 2007	December 31, 2006
Commercial	.51%	.57%
Commercial real estate	.83	.53
Residential mortgages (a)	.86	.62
Retail	.58	.58
Total loans	.65%	.57%

(a) *Delinquent loan ratios exclude advances made pursuant to servicing agreements to Government National Mortgage Association (GNMA) mortgage pools whose repayments are insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs. Including the guaranteed amounts, the ratio of residential mortgages 90 days or more past due was 3.20 percent at September 30, 2007, and 3.11 percent at December 31, 2006.*

Credit Risk Management The Company s strategy for credit risk management includes well-defined, centralized credit policies, uniform underwriting criteria, and ongoing risk monitoring and review processes for all commercial and consumer credit exposures. In evaluating its credit risk, the Company considers changes, if any, in underwriting activities, the loan portfolio composition (including product mix and geographic, industry or customer-specific concentrations), trends in loan performance, the level of allowance coverage relative to similar banking institutions and macroeconomic factors. Refer to Management s Discussion and Analysis Credit Risk Management in the

Company s Annual Report on Form 10-K for the year ended December 31, 2006, for a more detailed discussion on credit risk management processes.

Loan Delinquencies Trends in delinquency ratios represent an indicator, among other considerations, of credit risk within the Company s loan portfolios. The Company measures delinquencies, both including and excluding nonperforming loans, to enable comparability with other companies. Accruing loans 90 days or more past due totaled $451 million at September 30, 2007, compared with $349 million at December 31, 2006. These loans are not included in nonperforming assets and continue to accrue interest because they are adequately secured by collateral, and/or are in the process of collection and are reasonably expected to result in repayment or restoration to current status. The ratio of accruing loans 90 days or more past due to total loans was ..30 percent at September 30, 2007, compared with ..24 percent at December 31, 2006.

The Company s retail lending business utilizes several distinct business processes and channels to originate retail credit, including traditional branch lending, indirect lending, portfolio acquisitions and a consumer finance division. Generally, loans managed by the Company s consumer finance division exhibit higher credit risk characteristics, but are priced commensurate with the differing risk profile. To monitor credit risk associated with retail loans, the Company monitors delinquency ratios in the various stages of collection, including nonperforming status.

The following table provides summary delinquency information for residential mortgages and retail loans:

	Amount		As a Percent of Ending Loan Balances	
(Dollars in Millions)	September 30, 2007	December 31, 2006	September 30, 2007	December 31, 2006

Advances on loans	9		9
Total additions	405	47	452
Reductions in nonperforming assets			
Paydowns, payoffs	(107)	(18)	(125)

Net sales	(83)		(83)
Return to performing status	(43)	(1)	(44)
Charge-offs (c)	(136)	(10)	(146)
Total reductions	(369)	(29)	(398)
Net additions to nonperforming assets	36	18	54
Balance September 30, 2007	$442	$199	$641

(a) Throughout this document, nonperforming assets and related ratios do not include accruing loans 90 days or more past due.

(b) Excludes $95 million and $83 million of foreclosed GNMA loans which continue to accrue interest at September 30, 2007, and December 31, 2006, respectively.

(c) Charge-offs exclude actions for certain card products and loan sales that were not classified as nonperforming at the time the charge-off occurred.

(d) Residential mortgage information excludes changes related to residential mortgages serviced by others.

Within the consumer finance division at September 30, 2007, approximately $206 million and $77 million of these delinquent and nonperforming residential mortgages and other retail loans, respectively, were to customers that may be defined as sub-prime borrowers, compared with $105 million and $50 million, respectively, at December 31, 2006.

Nonperforming Assets The level of nonperforming assets represents another indicator of the potential for future credit losses. At September 30, 2007, total nonperforming assets were $641 million, compared with $587 million at December 31, 2006. The ratio of total nonperforming assets to total loans and other real estate was ..43 percent at September 30, 2007, compared with ..41 percent at December 31, 2006. The change in nonperforming assets reflects higher levels of nonperforming loans resulting from stress in the mortgage lending and homebuilding industries and an increase in other real estate assets primarily representing residential mortgage loan foreclosures.

Included in nonperforming loans were restructured loans of $20 million at September 30, 2007, compared with $38 million at December 31, 2006. At September 30, 2007, and December 31, 2006, the Company had no commitments to lend additional funds under restructured loans.

Table of Contents

Other real estate included in nonperforming assets was $113 million at September 30, 2007, compared with $95 million at December 31, 2006, and was primarily related to properties that the Company has taken ownership of that once secured residential mortgages and home equity and second mortgage loan balances.
The following table provides an analysis of other real estate as a percent of their related loan balances, including further detail for residential mortgages and home equity and second mortgage loan balances by geographical location:

	Amount		As a Percent of Ending Loan Balances	
(Dollars in Millions)	September 30, 2007	December 31, 2006	September 30, 2007	December 31, 2006
Residential mortgages and home equity and second mortgages				
Michigan	$24	$17	4.28%	2.90%
Ohio	10	12	.39	.48
Minnesota	12	11	.23	.21
Colorado	7	7	.25	.28
Missouri	6	6	.23	.25
All other states	52	38	.21	.16
Total residential mortgages and home equity and second mortgages	111	91	.29	.25
Commercial real estate and construction	2	4	.01	.01
Total	$113	$95	.08%	.07%

Within other real estate in the table above, approximately $62 million at September 30, 2007, and $41 million at December 31, 2006, were from portfolios that may be defined as sub-prime.

The Company expects nonperforming assets to increase moderately over the next several quarters due to continued stress in the mortgage lending and homebuilding industries.

Restructured Loans Accruing Interest On a case-by-case basis, management determines whether an account that experiences financial difficulties should be modified as to its interest rate or repayment terms to maximize the Company s collection of its balance.

Loans restructured at a rate equal to or greater than that of a new loan with comparable risk at the time the contract is modified are excluded from restructured loans once repayment performance, in accordance with the modified agreement, has been demonstrated over several payment cycles. Loans that have interest rates reduced below comparable market rates remain classified as restructured loans; however, interest income is accrued at the reduced rate as long as the customer complies with the revised terms and conditions.
The following table provides a summary of restructured loans that continue to accrue interest:

	Amount		As a Percent of Ending Loan Balances	
(Dollars in Millions)	September 30, 2007	December 31, 2006	September 30, 2007	December 31, 2006
Commercial	$20	$18	.04%	.04%

Commercial real estate		1		
Residential mortgages	100	80	.44	.38
Credit card	300	267	2.93	3.08
Other retail	48	39	.12	.10
Total	$468	$405	.31%	.28%

Analysis of Loan Net Charge-Offs Total loan net charge-offs were $199 million and $567 million during the third quarter and first nine months of 2007, respectively, compared with net charge-offs of $135 million and $375 million, respectively, for the same periods of 2006. The ratio of total loan net charge-offs to average loans outstanding on an annualized basis in the third quarter and first nine months of 2007 was .54 percent and ..52 percent, respectively, compared with .38 percent and .36 percent, respectively, for the same periods of 2006. The year-over-year increases in total net charge-offs were due primarily to an anticipated increase in consumer charge-offs, primarily related to credit cards, and somewhat higher commercial loan net charge-offs. In addition, net charge-offs during 2006 reflected the beneficial impact of bankruptcy legislation that went into effect in the fourth quarter of 2005.

Commercial and commercial real estate loan net charge-offs for the third quarter of 2007 were

Table of Contents

Table 7 Net Charge-offs as a Percent of Average Loans Outstanding

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2007	2006	2007	2006

Credit card	3.09	2.85	3.36	2.74
Retail leasing	.19	.22	.20	.19
Home equity and second mortgages	.49	.31	.44	.33
Other retail	1.00	.79	.93	.81
Total retail	1.15	.90	1.13	.87
Total loans	.54%	.38%	.52%	.36%

$39 million (.20 percent of average loans outstanding on an annualized basis), compared with $21 million (.11 percent of average loans outstanding on an annualized basis) for the third quarter of 2006. Commercial and commercial real estate loan net charge-offs for the first nine months of 2007 were $113 million (.20 percent of average loans outstanding on an annualized basis), compared with $55 million (.10 percent of average loans outstanding on an annualized basis) for the first nine months of 2006. Given the continuing stress in the homebuilding industry, the Company expects commercial and commercial real estate net charge-offs to continue to increase moderately over the next several quarters.

Retail loan net charge-offs for the third quarter of 2007 were $143 million (1.15 percent of average loans outstanding on an annualized basis), compared with $103 million (.90 percent of average loans outstanding on an annualized basis) for the third quarter of 2006. Retail loan net charge-offs for the first nine months of 2007 were $410 million (1.13 percent of average loans outstanding on an annualized basis), compared with $291 million (.87 percent of average loans outstanding on an annualized basis) for the first nine months of 2006. The increase in retail loan net charge-offs reflected growth in the retail portfolios, including an increase in average credit card balances of 26.9 percent in the third quarter and 24.1 percent in the first nine months of 2007, compared with the same periods of the prior year. In addition, net charge-offs for 2006 reflected the beneficial impact of bankruptcy legislation changes that occurred in the fourth quarter of 2005. The Company anticipates higher delinquencies in the retail portfolios and that retail net charge-offs will increase moderately over the next several quarters.

Analysis and Determination of the Allowance for Credit Losses The allowance for loan losses provides coverage for probable and estimable losses inherent in the Company s loan and lease portfolio. Management evaluates the allowance each quarter to determine that it is adequate to cover these inherent losses. Several factors were taken into consideration in evaluating the allowance for credit losses at September 30, 2007, including the risk profile of the portfolios, loan net charge-offs during the period, the level of nonperforming assets, accruing loans 90 days or more past due, delinquency ratios and changes in restructured loan balances compared with December 31, 2006. Management also considered the uncertainty related to certain industry sectors, and the extent of credit exposure to specific borrowers within the portfolio. In addition, concentration risks associated with commercial real estate and the mix of loans, including credit cards, loans originated through the consumer finance division and residential mortgage balances, and their relative credit risks were evaluated. Finally, the Company considered current economic conditions that might impact the portfolio.

Annualized net charge-offs	286	421		

Table of Contents

At September 30, 2007, the allowance for credit losses was $2,260 million (1.52 percent of loans), compared with an allowance of $2,256 million (1.57 percent of loans) at December 31, 2006. The ratio of the allowance for credit losses to nonperforming loans was 441 percent at September 30, 2007, compared with 480 percent at December 31, 2006. The ratio of the allowance for credit losses to annualized loan net charge-offs was 286 percent at September 30, 2007, compared with 415 percent at December 31, 2006.

Residual Value Risk Management The Company manages its risk to changes in the residual value of leased assets through disciplined residual valuation setting at the inception of a lease, diversification of its leased assets, regular residual asset valuation reviews and monitoring of residual value gains or losses upon the disposition of assets. As of September 30, 2007, no significant change in the amount of residuals or concentration of the portfolios has occurred since December 31, 2006. Refer to Management s Discussion and Analysis Residual Value Risk Management in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on residual value risk management.

Operational Risk Management The Company manages operational risk through a risk management framework and its internal control processes. Within this framework, the Corporate Risk Committee (Risk Committee) provides oversight and assesses the most significant operational risks facing the Company within its business lines. Under the guidance of the Risk Committee, enterprise risk management personnel establish policies and interact with business lines to monitor significant operating risks on a regular basis. Business lines have direct and primary responsibility and accountability for identifying, controlling and monitoring operational risks embedded in their business activities. Refer to Management s Discussion and Analysis Operational Risk Management in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on operational risk management.

Interest Rate Risk Management In the banking industry, changes in interest rates are a significant risk that can impact earnings, market valuations and safety and soundness of an entity. To minimize the volatility of net interest income and the market value of assets and liabilities, the Company manages its exposure to changes in interest rates through asset and liability management activities within guidelines established by its Asset Liability Policy Committee (ALPC) and approved by the Board of Directors. ALPC has the responsibility for approving and ensuring compliance with ALPC management policies, including interest rate risk exposure. The Company uses net interest income simulation analysis and market value of equity modeling for measuring and analyzing consolidated interest rate risk.

Net Interest Income Simulation Analysis Through this simulation, management estimates the impact on net interest income of gradual upward or downward changes of market interest rates over a one-year period, the effect of immediate and sustained parallel shifts in the yield curve and the effect of immediate and sustained flattening or steepening of the yield curve. The table below summarizes the interest rate risk of net interest income based on forecasts over the succeeding 12 months. At September 30, 2007, the Company s overall interest rate risk position was liability sensitive to changes in interest rates. ALPC policy guidelines limit the estimated change in net interest income to 4.0 percent of forecasted net interest income over the succeeding 12 months. At September 30, 2007, and December 31, 2006, the Company was within its policy guidelines. Refer to Management s Discussion and Analysis Net Interest Income Simulation Analysis in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on net interest income simulation analysis.

Market Value of Equity Modeling The Company also manages interest rate sensitivity by utilizing market value of equity modeling, which measures the degree to which the market values of the Company s assets, liabilities and off-balance sheet instruments will change given a change in interest rates. ALPC guidelines limit the change in market value of equity in a 200 basis point parallel rate shock to 15 percent of the market value of equity assuming interest rates at September 30, 2007. The up 200 basis point scenario resulted in a 7.2 percent decrease in the market value of equity at September 30, 2007, compared with a 6.7 percent

(a) At September 30, 2007, the credit equivalent amount was $2 million and $64 million, compared with $2 million and $50 million at December 31, 2006, for purchased and written risk participation agreements, respectively.

decrease at December 31, 2006. The down 200 basis point scenario resulted in a 4.0 percent decrease in the market value of equity at September 30, 2007, compared with a 1.8 percent decrease at December 31, 2006. At September 30, 2007, and December 31, 2006, the Company was within its policy guidelines.

The Company also uses duration of equity as a measure of interest rate risk. The duration of equity is a measure of the net market value sensitivity of the assets, liabilities and derivative positions of the Company. At September 30, 2007, the duration of assets, liabilities and equity was 1.8 years, 1.9 years and 1.3 years, respectively, compared with 1.8 years, 1.9 years and 1.6 years, respectively, at December 31, 2006. The duration of equity measures shows that sensitivity of the market value of equity of the Company was liability sensitive to changes in interest rates. Refer to Management s Discussion and Analysis Market Value of Equity Modeling in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on market value of equity modeling.

Use of Derivatives to Manage Interest Rate and Other Risks In the ordinary course of business, the Company enters into derivative transactions to manage its interest rate, prepayment, credit, price and foreign currency risks (asset and liability management positions) and to accommodate the business requirements of its customers (customer-related positions). Refer to Management s Discussion and Analysis Use of Derivatives to Manage Interest Rate and Other Risks in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion

on the use of derivatives to manage interest rate and other risks.

By their nature, derivative instruments are subject to market risk. The Company does not utilize derivative instruments for speculative purposes. Of the Company s $54.1 billion of total notional amount of asset and liability management positions at September 30, 2007, $28.2 billion was designated as either cash flow or fair value hedges or net investment hedges of foreign operations. The cash flow hedge derivative positions are interest rate swaps that hedge the forecasted cash flows from the underlying variable-rate debt. The fair value hedges are primarily interest rate swaps that hedge the change in fair value related to interest rate changes of underlying fixed-rate debt and subordinated obligations.

In addition, the Company uses forward commitments to sell residential mortgage loans to hedge its interest rate risk related to residential mortgage loans held-for-sale. In connection with its mortgage banking operations, the Company held $2.4 billion of forward commitments to sell mortgage loans and $2.9 billion of unfunded mortgage loan commitments at September 30, 2007, that were derivatives in accordance with the provisions of the Statement of Financial Accounting Standards No. 133, Accounting for Derivative Instruments and Hedge Activities. The unfunded mortgage loan commitments are reported at fair value as options in Table 9. The Company also utilizes U.S. Treasury futures, options on U.S. Treasury futures contracts and forward commitments to buy residential mortgage loans to economically hedge the change in fair value of its residential MSRs.

At September 30, 2007, the Company had $91 million in accumulated other comprehensive income related to realized and unrealized losses on derivatives classified as cash flow hedges. Unrealized gains and losses are reflected in earnings when the related cash flows or hedged transactions occur and offset the related performance of the hedged items. The estimated amount to be reclassified from accumulated other comprehensive income into earnings during the remainder of 2007 and the next 12 months is a loss of $19 million and $62 million, respectively.

The change in the fair value of all other asset and liability management positions attributed to hedge ineffectiveness recorded in noninterest income was not material for the third quarter and first nine months of 2007. Gains or losses on customer-related positions were not material for the third quarter and first nine months of 2007.

The Company enters into derivatives to protect its net investment in certain foreign operations. The Company uses forward commitments to sell specified amounts of certain foreign currencies to hedge fluctuations in foreign currency exchange rates. The net amount of gains or losses included in the cumulative translation adjustment for the third quarter and first nine months of 2007 was not material.

Market Risk Management In addition to interest rate risk, the Company is exposed to other forms of market risk as a consequence of conducting normal trading activities. These trading activities principally support the risk management processes of the Company s customers including their management of foreign currency and interest rate risks. The Company also manages market risk of non-trading business activities including its MSRs and loans held-for-sale. Value at Risk (VaR) is a key measure of market risk for the Company. Theoretically, VaR represents the maximum amount that the Company has placed at risk of loss, with a ninety-ninth percentile degree of confidence, to adverse market movements in the course of its risk taking activities. The Company s market valuation risk for trading and non-trading positions, as estimated by the VaR analysis, was $1 million and $16 million, respectively, at September 30, 2007, compared with $1 million and $30 million, respectively, at December 31, 2006. At September 30, 2007, the Company s VaR limit was $45 million.

During the third quarter of 2007, the financial markets experienced significant turbulence as the impact of mortgage delinquencies, defaults and foreclosures has adversely affected investor confidence in a broad range of investment sectors and asset classes. Given that the Company s owned investments are principally U.S. Treasury securities, notes issued by government-sponsored agencies or privately issued securities with high investment grade credit ratings, the Company believes these securities are not other-than-temporarily impaired as of September 30, 2007, despite being subject to changes in market valuations. The Company s subsidiary, FAF Advisors, manages an array of money market funds. Like many money market funds, these funds invest a portion of their assets in asset-backed commercial paper and medium-term notes. As problems in the sub-prime mortgage market have emerged, certain securities backed by mortgages have experienced both credit and liquidity issues, and investors have become hesitant to purchase many types of asset-backed securities, even those with little or no exposure to sub-prime mortgages. The money market funds managed by FAF Advisors have some exposure to liquidity and credit issues in

the asset-backed commercial paper market. The Company has undertaken, or may take, certain steps with respect to specific investments to

Table of Contents

Table 10 Capital Ratios

(Dollars in Millions)	September 30, 2007	December 31, 2006
Tier 1 capital	$17,368	$ 17,036
As a percent of risk-weighted assets	8.6%	8.8%
As a percent of adjusted quarterly average assets (leverage ratio)	8.1%	8.2%
Total risk-based capital	$25,900	$ 24,495
As a percent of risk-weighted assets	12.8%	12.6%
Tangible common equity	$11,645	$ 11,703
As a percent of tangible assets	5.3%	5.5%

maintain the credit ratings of the rated money funds managed by FAF Advisors. While not material to the consolidated financial statements, management believes the impact of these steps could range from one to three cents per diluted share over the next few quarters.

Refer to Management s Discussion and Analysis Market Risk Management in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on market risk management.

Liquidity Risk Management ALPC establishes policies, as well as analyzes and manages liquidity, to ensure that adequate funds are available to meet normal operating requirements in addition to unexpected customer demands for funds in a timely and cost-effective manner. Liquidity management is viewed from long-term and short-term perspectives, as well as from an asset and liability perspective. Management monitors liquidity through a regular review of maturity profiles, funding sources, and loan and deposit forecasts to minimize funding risk. Refer to Management s Discussion and Analysis Liquidity Risk Management in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on liquidity risk management.

At September 30, 2007, parent company long-term debt outstanding was $10.8 billion, compared with $11.4 billion at December 31, 2006. The $.6 billion decrease was primarily due to repayments of $2.4 billion of convertible senior debentures and $1.4 billion of maturities of subordinated and medium-term notes, partially offset by the issuances of $3.0 billion of convertible senior debentures and $.5 billion of junior subordinated debentures. As of September 30, 2007, there was no parent company debt scheduled to mature during the remainder of 2007.

Federal banking laws regulate the amount of dividends that may be paid by banking subsidiaries without prior approval. The amount of dividends available to the parent company from its banking subsidiaries after meeting the regulatory capital requirements for well-capitalized banks was approximately $1.3 billion at September 30, 2007.

Capital Management The Company is committed to managing capital for maximum shareholder benefit and maintaining strong protection for depositors and creditors. In the first nine months of 2007, the Company returned 117 percent of earnings to its common shareholders through a combination of dividends and net share repurchases. The Company also manages its capital to exceed regulatory capital requirements for well-capitalized bank holding companies. Table 10 provides a summary of capital ratios as of September 30, 2007, and December 31, 2006. All regulatory ratios continue to be in excess of regulatory well-capitalized requirements. Total shareholders equity was $20.8 billion at September 30, 2007, compared with $21.2 billion at December 31, 2006. The decrease was the result of share repurchases and dividends, partially offset by corporate earnings.

On August 3, 2006, the Company announced that the Board of Directors approved an authorization to repurchase 150 million shares of common stock through December 31, 2008.

The following table provides a detailed analysis of all shares repurchased under this authorization during the third quarter of 2007:

	Maximum Number

Time Period	Total Number of Shares Purchased as Part of the Program	Average Price Paid per Share	of Shares that May Yet Be Purchased Under the Program
July	2,654,429	$31.92	67,245,044
August	2,738,590	29.97	64,506,454
September	17,500	33.35	64,488,954
Total	5,410,519	$30.94	64,488,954

LINE OF BUSINESS FINANCIAL REVIEW

Within the Company, financial performance is measured by major lines of business, which include Wholesale Banking, Consumer Banking, Wealth Management & Securities Services, Payment Services, and Treasury and Corporate Support. These operating segments are components of the Company about which financial information is available and is evaluated regularly in deciding how to allocate resources and assess performance.

Basis for Financial Presentation Business line results are derived from the Company s business unit profitability reporting systems by specifically attributing managed balance sheet assets, deposits and other liabilities and their related income or expense. Refer to Management s Discussion and Analysis Line of Business Financial Review in the Company s Annual Report on Form 10-K for the year ended December 31, 2006, for further discussion on the business lines basis for financial presentation.

Designations, assignments and allocations change from time to time as management systems are enhanced, methods of evaluating performance or product lines change or business segments are realigned to better respond to the Company s diverse customer base. During 2007, certain organization and methodology changes were made and, accordingly, 2006 results were restated and presented on a comparable basis.

Wholesale Banking Wholesale Banking offers lending, equipment finance and small-ticket leasing, depository, treasury management, capital markets, foreign exchange, international trade services and other financial services to middle market, large corporate, commercial real estate and public sector clients. Wholesale Banking contributed $265 million of the Company s net income in the third quarter and $817 million in the first nine months of 2007, or decreases of $33 million (11.1 percent) and $90 million (9.9 percent), respectively, compared with the same periods of 2006. The decreases were primarily driven by lower total net revenue, higher total noninterest expense and an increase in the provision for credit losses.

Total net revenue decreased $36 million (5.2 percent) in the third quarter and $78 million (3.7 percent) in the first nine months of 2007, compared with the same periods of 2006. Net interest income, on a taxable-equivalent basis, decreased $27 million (5.6 percent) in the third quarter and $82 million (5.7 percent) in the first nine months of 2007, compared with the same periods of 2006. The decreases were primarily driven by tighter credit spreads and a decline in average noninterest-bearing deposit balances as some customers managed their liquidity to fund business growth or to generate higher returns by investing excess funds in interest-bearing deposit and sweep products. The decreases were partially offset by growth in average loan balances and the margin benefit of deposits. The increase in average loans was driven by commercial loan growth during 2006 and the first nine months of 2007. Noninterest income decreased $9 million (4.1 percent) in the third quarter of 2007 compared with the third quarter of 2006 primarily due to market-related valuation losses in trading securities and a commercial real estate lending joint venture. Noninterest income increased $4 million (.6 percent) in the first nine months of 2007, compared with the same period of 2006, due to increases in treasury management and commercial products revenue. These increases were partially offset by the market-related valuation losses in the third quarter of 2007.

Total noninterest expense increased $12 million (5.3 percent) in the third quarter and $26 million (3.8 percent) in the first nine months of 2007, compared with the same periods of 2006, primarily as a result of increases in personnel expenses related to investments in select business units. The provision for credit losses increased $4 million in the third quarter and $38 million in the first nine months of 2007, compared with the same periods of 2006. The unfavorable changes were due to an increase in gross charge-offs. Nonperforming assets increased in the third quarter of 2007 due to stress in the mortgage lending industry. Nonperforming assets were $292 million at September 30, 2007, $230 million at June 30, 2007, and $213 million at September 30, 2006. Nonperforming assets as a percentage of period-end loans were ..56 percent at September 30, 2007, .46 percent at June 30, 2007, and .42 percent at September 30, 2006. Refer to the Corporate Risk Profile section for further information on factors impacting the credit quality of the loan portfolios.

Consumer Banking Consumer Banking delivers products and services through banking offices, telephone servicing and sales, on-line services, direct mail and ATMs. It encompasses community banking, metropolitan banking, in-store banking, small business banking, consumer lending, mortgage banking, consumer finance, workplace banking, student banking and 24-hour banking. Consumer Banking contributed $455 million of the Company s net income in the third quarter and $1,343 million in the first nine months of 2007, or decreases of $19 million (4.0 percent) and $32 million (2.3 percent), respectively, compared with the same periods of 2006. The retail banking division contributed $420 million of the total contribution in the third quarter and $1,256 million in the first nine months of 2007, or decreases of 5.2 percent and 3.9 percent, respectively, compared with the same periods in the prior year.

Total net revenue increased $29 million (2.0 percent) in the third quarter and $95 million (2.3 percent) in the first nine months of 2007, compared with the same periods of 2006. Net interest income, on a taxable-equivalent basis,

increased $4 million

(.4 percent) in the third quarter and $17 million (.6 percent) in the first nine months of 2007, compared with the same periods of 2006. The year-over-year increases in net interest income were due to growth in average loans, higher loan fees and the funding benefit of deposits. Partially offsetting these increases were reduced spreads on commercial and retail loans due to competitive pricing within the Company s markets. The increases in average loan balances reflected growth in all loan categories, with the largest increase in retail loans. The growth in retail loans was principally driven by an increase in installment and home equity loans, partially offset by a reduction in retail leasing balances due to customer demand for installment loan products and pricing competition. The year-over-year decreases in average deposits reflected a reduction in savings and noninterest-bearing deposit products, partially offset by growth in time deposits and interest checking. Average time deposit balances grew $1.4 billion (7.3 percent) in the third quarter and $1.6 billion (8.8 percent) in the first nine months of 2007, compared with the same periods of 2006, as a portion of noninterest-bearing and money market balances migrated to fixed-rate time deposit products. Average savings balances declined $1.2 billion (5.9 percent) in the third quarter and $1.8 billion (8.4 percent) in the first nine months of 2007, compared with the same periods of 2006, primarily related to a decrease in money market account balances. Fee-based noninterest income increased $25 million (5.5 percent) in the third quarter and $78 million (6.0 percent) in the first nine months of 2007, compared with the same periods of 2006. The increases were driven by mortgage banking revenue, principally related to higher production gains and servicing income, as well as an increase in deposit service charges.

Total noninterest expense increased $26 million (4.1 percent) in the third quarter and $85 million (4.6 percent) in the first nine months of 2007, compared with the same periods of 2006. The increases were primarily attributable to higher compensation and employee benefits expense which reflected the net addition, including the impact of recent acquisitions, of 31 in-store and 19 traditional branches at September 30, 2007, compared with September 30, 2006. Credit-related costs on other real estate owned were also higher in 2007 compared with 2006.

The provision for credit losses increased $33 million (56.9 percent) in the third quarter and $61 million (34.7 percent) in the first nine months of 2007, compared with the same periods of 2006. The increases were attributable to higher net charge-offs. As a percentage of average loans outstanding on an annualized basis, net charge-offs increased to ..48 percent in the third quarter of 2007, compared with ..32 percent in the third quarter of 2006. Commercial and commercial real estate loan net charge-offs increased $10 million in the third quarter of 2007, compared with the third quarter of 2006. Retail loan and residential mortgage net charge-offs increased $23 million (46.9 percent) in the third quarter of 2007, compared with the third quarter of 2006. Nonperforming assets were $316 million at September 30, 2007, $300 million at June 30, 2007, and $305 million at September 30, 2006. Nonperforming assets as a percentage of period-end loans were ..44 percent at September 30, 2007, .42 percent at June 30, 2007, and .44 percent at September 30, 2006. Refer to the Corporate Risk Profile section for further information on factors impacting the credit quality of the loan portfolios.

Wealth Management & Securities Services Wealth Management & Securities Services provides trust, private banking, financial advisory, investment management, retail brokerage services, insurance, custody and mutual fund servicing through five businesses: Wealth Management, Corporate Trust, FAF Advisors, Institutional Trust & Custody and Fund Services. Wealth Management & Securities Services contributed $165 million of the Company s net income in the third quarter and $489 million in the first nine months of 2007, or increases of $17 million (11.5 percent) and $52 million (11.9 percent), respectively, compared with the same periods of 2006. The growth was primarily attributable to core account fee growth and improved equity market conditions relative to a year ago.

Total net revenue increased $29 million (6.0 percent) in the third quarter and $76 million (5.2 percent) in the first nine months of 2007, compared with the same periods of 2006. Net interest income, on a taxable-equivalent basis, decreased $3 million (2.3 percent) in the third quarter and $15 million (3.9 percent) in the first nine months of 2007, compared with the same periods of 2006. The decreases in net interest income were due to the unfavorable impacts of deposit pricing and tightening credit spreads, partially offset by earnings from deposit growth. The increases in total deposits were attributable to growth in noninterest-bearing deposits, interest checking and time deposits, principally due to acquired businesses. Noninterest income increased $32 million (9.0 percent) in the third quarter and $91 million (8.5 percent) in the first nine months of 2007, compared with the same periods of 2006, primarily driven by core account fee growth and favorable equity market conditions.
